Project: Smarter Ways to Manage Parking

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

"*Making changes* that link to improvements in transport system" is somewhat vague/ambiguous.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

This seems largely similar to BAU; rearranging the existing structures. Given the differences in space demands from the various options (e.g. bike or micro mobility paring is far far more space efficient), it's hard to judge the options without knowing more about *how much* space will be allocated within the priorities. And the options seem somewhat predicated on maintain the space as parking.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

In principle I agree, but this has the potential to introduce income inequity aspects.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

Public transport seems unreliable to me

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Somewhat important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Hospital parking in Newtown, how can you do this on cost when you don't know how long your appointment will run and are unwell so cannot take pubic transport to attend appointments

---

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1.

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

A lot of garages in the inner city area are so small they do not fit modern cars (they are just too small) they are also dangerous to get in and out of on busy roads and blind steep hills that Wellington has. you also find that people park over them and block you in (or out)

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Hospital parking in the Newtown area is a very, very big problem. Staff, patents and visitors need to get to work safely and not be parking on the sounding streets. MORE PARKING NEEDS TO BE BUILT AT THE HOSPITAL. Please don't take parking of residents because of the DHB. people in Newtown are high public transport/walking/biking users but we still need a car to get our familys around to sport/ groups/life etc. We also like to have visitors and family to stay and they need parks (please don't take our social life from us) do the right thing by informing the DHB they most fix this problem.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Neutral
Support city amenity and safety	Neutral
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Residents are not being considered much n what if some people dont own or dont intend to own an EV.

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. All existing dwellings with 1 or more off-street space

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Second permits

4. Other pre-2020 dwellings with no off-street parking

5. Mobility permit holders

6. New dwellings/homes built after 2020

7. EV owners with no off-street parking

8. Businesses located with the zone

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Residential parking should not be difficult especially close to business district n the amount of street parks available. Vehicles can not/should not be allowed to remain parked up for 2-4 weeks at one time. Free parks should all be P120 Monday to Friday to move traffic n street parking on.

Q20. What deters you from using public transport? Please select all that apply.

When the weather is bad, I choose to use my private vehicle

Using public transport is difficult when travelling with young children/babies

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Multiple people come with me on this journey

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

Residential parking n more P120 Monday to Friday especially on the out skirts of busy business district, eg; Newtown, Berhampore, Island Bay, Kilbirnie, Miramar etc.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Animal friendly.

Q3. **Is there anything else you would like to tell us about the objectives?**

I think the objectives are superb - and I also admit, that getting one objective right means that often the other objectives can be slightly compromised - so I have huge sympathy for the planners. The only reason I added "animal friendly" is that in a time of potential social isolation (Covid19) - the small green spaces in the city are more important than ever.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

These priority zones are well thought out. It is impressive to see.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This is a sound approach - well done.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. All existing dwellings with 1 or more off-street space
6. Businesses located with the zone
7. New dwellings/homes built after 2020
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

This is well thought out and not only do-able but we can explain the rationale to others.

Q20. **What deters you from using public transport? Please select all that apply.**

When the weather is bad, I choose to use my private vehicle

Public transport seems unreliable to me

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

Other (please specify)

I have to make multiple stops or multiple journeys

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Thank you so much for making this consultation available. The complexity of the issue is such that while one can't always get things right - moving in the right direction is something that one must both acknowledge and applaud.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. EV owners with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. Businesses located with the zone

7. New dwellings/homes built after 2020

8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Using public transport is difficult when travelling with young children/babies

---

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Other (please specify)

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

not answered

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

not answered

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Residents in the city fringe need their visitors to be able to park in short stay parks eg midwives doing home visits to babies

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

If you want people to move to public transport the buses need to be reliable- I often end up having to drive my kids to school because a bus is cancelled at the last minute

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Mobility permit holders
3. Other pre-2020 dwellings with no off-street parking
4. Businesses located with the zone
5. EV owners with no off-street parking
6. New dwellings/homes built after 2020
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Comments based on living in Mt Vic for 15 years in an 1895 house with no off street parking

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Using public transport is difficult when travelling with young children/babies

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Buses need to be a reliable option and not cancelled at the last minute

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Very unimportant

Q2. **Are there any objectives you think we have missed?**

Support access to the elderly, disabled and very young.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat unhelpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly disagree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Elitist. Only the wealthy can afford to park at their convenience.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Other pre-2020 dwellings with no off-street parking
4. Second permits
5. EV owners with no off-street parking
6. All existing dwellings with 1 or more off-street space
7. New dwellings/homes built after 2020
8. Businesses located with the zone

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport is too expensive

Public transport timetable doesn't suit my schedule

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Using public transport is difficult when travelling with young children/babies

I don't feel safe using public transport early in the morning/late at night

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

I don't have a bike or want to purchase one

I have to make multiple stops or multiple journeys

Q22. Do you have any final comments about the topics raised in this submission?

Wellington is wet, windy and hilly. Wellington has a terrible public transport service. We need more parks not less if you consider how many new people are expected to move to the area and the amount of older people retiring and using private transport. Stop running the city with ideology and start making it work for the people that live in it!

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Your whole model is predicated on limiting parking to current levels, which have already decreased dramatically in the last 5 years. No forecasting takes in to account the changing methods of motor vehicle operation (removal of petrol combustion, introduction of EV's and autonomous vehicles, and how these will impact on the environment. Focusing your planning on existing fossil fueled systems shows a blinkered outlook. People will still drive and share cars, but ones that are environmentally neutral. They will still need places to park (but for much shorter periods) and an abstract adherence to light rail and other public transport options which are ill suited to Wellingtons topography, and which will run at a loss, is misguided and will result in cost that we cannot afford.

Q6. **Is there anything else you would like to tell us about the principles?**

They're misguided, uneconomic and fallible. Let's fix our broken infrastructure instead of following a green Utopian dream that is doomed to fail.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Businesses located with the zone
2. Mobility permit holders
3. EV owners with no off-street parking
4. Second permits
5. Pre-1930s houses or pre-1940s apartments with no off-street parking
6. New dwellings/homes built after 2020
7. Other pre-2020 dwellings with no off-street parking
8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

---

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

What the principal purpose/priority is of managing parking and why.

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Why are EV charging parks of medium priority in every area? They should be lower priority in outer residential areas as many owners can charge vehicles at home or go to other off street charging points.

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Having 'low demand areas' won't reduce the number of cars coming in to the city. Parking prices should be there to encourage people to take up public transport or other alternatives. Rather have a blanket high price & residents only parking on fringe residential areas.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. EV owners with no off-street parking

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

It needs to be taken in to account if a dwelling is being rented or if it is owned and who is living there. E.g. a family with children where only 2 adults have the need for a vehicle versus a flat of adults that may or may not need vehicles for work.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Enforcing existing rules, taxis block loading zones or yellow lines, couriers can't get on loading zones due to contractors using them as free all day parking, public using them as free parking, time limits not enforced. Motorcycle/mopeds allowed to park blocking car parks and foot paths, rubbish left blocking paths and parks, towing not carried out.

Q3. **Is there anything else you would like to tell us about the objectives?**

Enforcing existing rules, taxis block loading zones or yellow lines, couriers can't get on loading zones due to contractors using them as free all day parking, public using them as free parking, time limits not enforced. Motorcycle/mopeds allowed to park blocking car parks and foot paths, rubbish left blocking paths and parks, towing not carried out.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

Enforcing existing rules, taxis block loading zones or yellow lines, couriers can't get on loading zones due to contractors using them as free all day parking, public using them as free parking, time limits not enforced. Motorcycle/mopeds allowed to park blocking car parks and foot paths, rubbish left blocking paths and parks, towing not carried out.

Q6. **Is there anything else you would like to tell us about the principles?**

Enforcing existing rules, taxis block loading zones or yellow lines, couriers can't get on loading zones due to contractors using them as free all day parking, public using them as free parking, time limits not enforced. Motorcycle/mopeds allowed to park blocking car parks and foot paths, rubbish left blocking paths and parks, towing not carried out.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Enforcing existing rules, taxis block loading zones or yellow lines, couriers can't get on loading zones due to contractors using them as free all day parking, public using them as free parking, time limits not enforced. Motorcycle/mopeds allowed to park blocking car parks and foot paths, rubbish left blocking paths and parks, towing not carried out. In Order, Bus Stops, Bus Layover areas, Loading Zones, Taxi Stands, Car Share, EV Parking, Residents, Commuter

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Enforcing existing rules, taxis block loading zones or yellow lines, couriers can't get on loading zones due to contractors using them as free all day parking, public using them as free parking, time limits not enforced. Motorcycle/mopeds allowed to park blocking car parks and foot paths, rubbish left blocking paths and parks, towing not carried out. Far too much traffic parks with out paying or double parks, it is cheaper to risk a ticket once given you get away with it 100's of times Parking enforcement prices should include a 15% PT support levy.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. Businesses located with the zone
6. All existing dwellings with 1 or more off-street space
7. Second permits
8. New dwellings/homes built after 2020

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Enforcing existing rules, taxis block loading zones or yellow lines, couriers can't get on loading zones due to contractors using them as free all day parking, public using them as free parking, time limits not enforced. Motorcycle/mopeds allowed to park blocking car parks and foot paths, rubbish left blocking paths and parks, towing not carried out. Towing policy and proper enforcement according to NZ traffic regulations, encourage police to take an active role in enforcement esp in dangerous/obstructive parking. Fund PT through a Non Residential Car Park tax starting at $1 a day and rising over a few years to $2 a day. Non residential includes all building with car parking used by tenants for commuter use, does not include buildings such as hotels/motels or car parks in buildings that are purely residential as long as all car park titles are in the name of the apartment owners.

Q20. What deters you from using public transport? Please select all that apply.

Public transport is too far from where I live or from my destination

Public transport timetable doesn't suit my schedule

Public transport route has too many transfers

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I am not able to physically access these modes of travel due to my personal circumstances

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

Enforcing existing rules, taxis block loading zones or yellow lines, couriers can't get on loading zones due to contractors using them as free all day parking, public using them as free parking, time limits not enforced. Motorcycle/mopeds allowed to park blocking car parks and foot paths, rubbish left blocking paths and parks, towing not carried out.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Neutral
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

If a second permit is issued for the same household, the second permit is more expensive

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce online application and permitting system

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Second permits

2. Other pre-2020 dwellings with no off-street parking

3. EV owners with no off-street parking

4. All existing dwellings with 1 or more off-street space

5. Mobility permit holders

6. Businesses located with the zone

7. Pre-1930s houses or pre-1940s apartments with no off-street parking

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

No comments on the taxi zoning or implantation of increased no parking zones for them in the cbd. Often have to circle the block a number of times as they car hop each other in certain areas.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Prioritise parking for low-impact transport options such as cycles, motorcycles and scooters, and possibly carpooling.

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Neutral

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Neutral

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

There is a need for bicycle parks in the suburban and urban fringe areas as many flats do not offer a garage or shed for bike parking. More young professionals and students would bike if they had somewhere safe to lock up a bike - many do not have space to keep one inside. Parks, recreational facilities etc should still prioritise bus stops, I can't see how they got to the absolute bottom of the list. Ideally there should be bus routes going to these places to allow good access to them.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

In some areas it would be better to remove the parking completely rather than have it priced higher, and replace with e.g. bus stops, bus lanes, cycle parking.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. Second permits

7. New dwellings/homes built after 2020

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Consider the size of the vehicle in the pricing. It should cost more to park a massive SUV or van in resident's parking than a small hybrid - as an encouragement to people to consider more eco-friendly vehicles.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

None of these, I walk/bike/scooter regularly

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

In many streets in my suburb and nearby, the streets permit parking on both sides. However as they are narrow and are bus routes, cars park partially or fully on the footpath to avoid being clipped by the bus or other vehicles. This is a huge hazard as it forces us to walk in the road when we are out with my nephew in his buggy, as it cannot fit past on the footpath. I also doubt any wheelchair or mobility scooters would safely get past. Many of these streets should probably be restricted to parking on one side only and have the centre line moved accordingly, and be monitored to ensure that people are not parking on the footpath. Despite reporting people regularly through the fixit app and leaving them notes, the problem does not stop.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

resident parking permit, only 1 per house in city fringe suburbs

---

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Mobility permit holders
3. Other pre-2020 dwellings with no off-street parking
4. EV owners with no off-street parking
5. All existing dwellings with 1 or more off-street space
6. Businesses located with the zone
7. New dwellings/homes built after 2020
8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Using public transport is difficult when travelling with young children/babies

I need my vehicle for work

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I am not able to physically access these modes of travel due to my personal circumstances

Multiple people come with me on this journey

I have to make multiple stops or multiple journeys

Q22. Do you have any final comments about the topics raised in this submission?

Support residents to achieve off-street parking if possible.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

They are not objectives, as stated, they are goals. Objectives need to be measurable.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat unhelpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

Principles come first, and need to be agreed before objectives are set. There appears to some very woolly thinking at play here.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I've disagreed with all descriptions of priorities. Addressing parking in isolation in this manner is deeply flawed, you start with land use, then transport, and address parking in that context. This screams point solution, and worse, with no measures, or indication of how an approach would be implemented, any sensitivity analysis or any review approach.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I have no confidence that you can manage this sensibly.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Introduce online application and permitting system

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Businesses located with the zone
4. EV owners with no off-street parking
5. Other pre-2020 dwellings with no off-street parking
6. All existing dwellings with 1 or more off-street space
7. New dwellings/homes built after 2020
8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

You seem to be all over the place. Providing an online service is a given in this day and age. But more importantly the first aspect you list merely restates the decision you've already made. This begs the question is this survey merely window dressing?

Q20. What deters you from using public transport? Please select all that apply.

Public transport seems unreliable to me

None of these, I use public transport regularly

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

I am dismayed by how poorly this survey has been out together, exacerbated by my lack of confidence it is a genuine opportunity to influence a plan going forward.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Particularly for the city fringe and outer residential areas, there needs to be residents' and coupon parks should be a higher priority than "urban design features". Until you improve the buses, people will still rely on cars to get them to work from outside the inner city.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

The approach doesn't really work all that well. FIrst, because all parks in Wellington are in demand all of the time and second, pricing doesn't affect demand for parks. Weekend parking in the inner city is just as hard to find now that there are weekend parking charges than when it was free. If you did want to reduce parking demand in popular areas, perhaps shorten time limits in the inner city parks in times of high demand and police it. For example, you could shorten time limits on Waring Taylor Street or Brandon to 60 minutes on weekends.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. EV owners with no off-street parking

5. Second permits

6. Businesses located with the zone

7. New dwellings/homes built after 2020

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Please don't remove any more coupon parking. It's stretched as it is, it could double as a second or third permit in a flat for instance. Encourage less people to take their cars by setting up more convenient and reliable public transport from the Northern Suburbs and Hutt Valley.

Q20. **What deters you from using public transport? Please select all that apply.**

When the weather is bad, I choose to use my private vehicle

Public transport seems unreliable to me

Using public transport is difficult when travelling with young children/babies

I don't feel safe using public transport early in the morning/late at night

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

The amount of targeting toward people who want a second permit for on street parking seems harsh. People living in areas like Newtown, Thorndon, Mt Vic and Kelburn to name a few aren't necessarily a Mum Dad and two kids. There are a ton of young professional and student flats, it's hard enough to find a flat without having to limit cars per house because of parking restrictions. Fair enough making third permits more expensive, but it's not uncommon for two flatmates in a four to five bedroom flats having two cars.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Neutral
Support business wellbeing	Neutral
Support city amenity and safety	Neutral
Support access for all	Neutral
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

Support residents wellbeing Support asset values

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Increase supply of Council-controlled parking Increase supply of privately-controlled parking

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Residents parks need to move up the priority and EV charging parks move down

---

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

You want to make it easy for people to do business and live in Wellington - excessive car park pricing does not make it easy or enjoyable. The decline of the CBD as a shopping precinct compared to growth in malls like Queensgate and North City is because it's free at those places and very expensive in the city. I for one would previously come into town for shopping on Saturdays but not anymore because of the parking charges

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce online application and permitting system

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Other pre-2020 dwellings with no off-street parking

3. EV owners with no off-street parking

4. Mobility permit holders

5. Second permits

6. Businesses located with the zone

7. All existing dwellings with 1 or more off-street space

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I like the idea of short-stay parking only (up to 3 hours) with residents exemption permits because many parks in our street are taken by commuters. When there is something on like round the bays, newtown fair, etc then it becomes impossible to leave house and return to find a car park because an outsider will have taken our parks

---

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

I have to make multiple stops or multiple journeys

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

"Support Tranport efficency and effectiveness" should be the most important objective. (I've chosen to proxy this as 'service excellence' in my response above)

Q3. **Is there anything else you would like to tell us about the objectives?**

Assuming we can't have everything, please ensure that any engagement with stakeholders exposes the trade-offs required. It may be helpful to have people force rank the objectives. People may answer differently depending on the cost implications.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

There's something missing about collaboration with other stakeholders - GWRC and NZTA are two that come to mind; central government too. There's a bit of finger pointing regarding the bustastrophe which jars with me when the various parties should be working together to solve.

Q6. **Is there anything else you would like to tell us about the principles?**

I think these are a useful set of principles.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

1. EV charging should NOT be a priority anywhere except fringe and residential - people should charge at home location rather than have any central facilities. 2. Good call on the key transport links. I think NO parking (not even drop off or loading) at key times on any of the primary bus routes. Bring in bus lanes for Karori road. 3. Secure bicycle parking with decent locking points is missing from the hierarchy and should be a priority in the central city - duplicate the Grey St bike park in 10+ more locations.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

There needs to be a mechanism to advise price at the point of decision (i.e. a sign to say "all parks in this zone at surge pricing; $10/30min" that I can see when driving a street) to avoid finding a park and then discovering the price is more than I'm willing to pay. Some sort of app based thing could be helpful.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. EV owners with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. Second permits

7. All existing dwellings with 1 or more off-street space

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

1. Limit the number of vehicles that any one property can park on a street (e.g. since moving in, the chap 2 doors up from me uses 6 spaces; and still hasn't completed the drive on access to his garage), so as to 'equitably' share residential road space. 2. Provide land for a park and ride scheme at key points on every bus route; so that commuters don't have to leave their cars and clog up the buses and deny residents the ability to park (e.g. Washington Ave)

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Public transport route has too many transfers

Public transport timetable doesn't suit my schedule

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Please remove the 4 parking spaces on Victoria St north of Vivian (or turn them into 15 min loading zones). Look for more opportunities for bus lanes.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

I'm a huge advocate of walking and cycling, but there still needs to be thought put into providing a place for cars in new developments. Where i live, we've had several new intensive residential accommodation go in with no parking - you cant tell me that the occupants of the several 100 new apartments wont have cars. They are now going to park on streets that are already very busy. I think this is bad planning and puts stress on the existing system.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Disagree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Disagree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Disagree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Residents need to be higher up the list. The vast majority have a car, and I cant believe that's going to change quickly. Those cars need to have access to a park within a safe and reasonable distance to the house. Wellington has a high proportion urban residents; houses densely built and many without car-parks, or garages that do not fit modern cars.

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking
Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. Businesses located with the zone
6. New dwellings/homes built after 2020
7. Second permits
8. All existing dwellings with 1 or more off-street space

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport is too expensive

Public transport seems unreliable to me

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

I love the idea of a community solutions to a local problem. We live in a short and quite cul de sac, there are a lot of cars that park here as there are several student flats and spill over from other streets. Our street is just shy of the dimensions to have legal angel parking, but the council a long time ago agreed to the residents angle parking slightly on the "footpath to nowhere" (it does not safely link up to other footpaths and is almost redundant). Most people walk down the middle of the street to get to the main road footpath. A cost effective measure to retain car-parks and peoples health and safety - can our street / streets like ours be designated as "shared spaces" for cars, pedestrians, bikers whoever - we all use the space courteously of everyone else, meaning we can park on the footpath allowing a 1m gap so people can walk/ride past, and cars known the streets are used by pedestrians and cyclists so will drive slowly and carefully to look out for them using the space?

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

Just when you are thinking about this, while it is all good to try move away from vehicles. You have to realise that people with children don't have a choice and need to drive. Buses are expensive, trains are unreliable and children don't sit still on a bicycle. Stop getting rid of carparks or you'll lose families. You'll have a city of childless people. The Hutt and Porirua are catering to families better at the moment.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

To prioritise the bus stops you have to fix the bus problems. Please don't make a mess like Kilbirnie.

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Introduce online application and permitting system

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Other pre-2020 dwellings with no off-street parking

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Second permits

4. New dwellings/homes built after 2020

5. Mobility permit holders

6. All existing dwellings with 1 or more off-street space

7. EV owners with no off-street parking

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

Public transport seems unreliable to me

Using public transport is difficult when travelling with young children/babies

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Providing enough parking spaces for people to be able to move into and around the city by car

Q3. **Is there anything else you would like to tell us about the objectives?**

Clearly designed to suit your foregone conclusion of making it more difficult to drive into and around the city. This will not result in people using alternative means of transport, it will result in people not coming into the city at all

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very unhelpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

Provide sufficient parking spaces or enable other providers to do so

Q6. **Is there anything else you would like to tell us about the principles?**

You have not provided any justification for your assumption that the number of parking spaces will reduce

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. **Council's Central City Off-Street Parking**High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Not providing space for private car parks will not result in people using other means of transport, it will result in people not going at all. Particularly for recreational facilities, this is idiotic

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Introduce online application and permitting system

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Businesses located with the zone

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. New dwellings/homes built after 2020

5. Mobility permit holders

6. EV owners with no off-street parking

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

New build homes should include provision for parking rather than increase pressure on streets

---

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Demand-related parking charges should be accompanied by timely information about the availability and location of parking spots

---

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

reliable and cheap public transport

Q3. **Is there anything else you would like to tell us about the objectives?**

finding a balance between public transport, parking and beautification.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

increase minority use such as mobility parks, loading zones and motorcycle parks, further restrict taxi usage of loading zones when not loading or unloading passengers. fixed video camera surveillance for mobility parks, bus lanes and problem spots for illegal parking.

Q6. **Is there anything else you would like to tell us about the principles?**

introduce allocated spaces for large motorcycles in every block, that are paid spaces (generally for above 250cc bikes)

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

need more residents only parking options in the outer suburbs, such as island bay, karori

---

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

a good approach, although need to set pricing bands for very high use and lower use areas still. also night parking up to 8pm every night

---

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

residents parking restrictions near shopping centres and exemptions may need to be reviewed. eg overflow of residents parking in the p120 zones in tinakori rd (but not the p60 area)

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Using public transport is difficult when travelling with young children/babies

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

would be great to be able to be involved with some of the decisions as I have plenty of ideas after visiting other cities where this works well.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **   Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**   Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking**High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. Businesses located with the zone

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

When the weather is bad, I choose to use my private vehicle

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

---

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. EV owners with no off-street parking
3. New dwellings/homes built after 2020
4. Second permits
5. All existing dwellings with 1 or more off-street space
6. Businesses located with the zone
7. Other pre-2020 dwellings with no off-street parking
8. Pre-1930s houses or pre-1940s apartments with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too far from where I live or from my destination

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

Shifting the transport used only works if there is a reliable public transport system as a alternative. The current bus service does not have a reputation for being reliable or user-friendly

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat unhelpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Neutral

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Wellington is a commuter city, by putting commuter cars as the very bottom of the list is not fair. People cannot afford housing in Wellington and are moving much further away and commute in. Public transport often doesn't work into peoples lifestyles and while its nice to think that people will buy EV's and electric bikes- the price of those is simply not obtainable for most people.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Not fair on people with access/mobility issues who need to park closer to the city or need to attend appointments.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Q18. Allocation of residents parking permits Please rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. All existing dwellings with 1 or more off-street space

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. Second permits

8. EV owners with no off-street parking

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport seems unreliable to me

Public transport route has too many transfers

I don't feel safe using public transport early in the morning/late at night

---

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I am not able to physically access these modes of travel due to my personal circumstances

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Q22. Do you have any final comments about the topics raised in this submission?

not answered

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. EV owners with no off-street parking
6. New dwellings/homes built after 2020
7. Second permits
8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

I have to make multiple stops or multiple journeys

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Effective use of public resources. Prioritise roads for transport and not parking. Place an appropriate cost to private use of public resources. If this piece of public road where not used for private parking how much more efficient would our transport network be? Charge for private parking based on cost to community.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

If City Fringe includes key routes in to CBD then it Resident Parking should be Low. Example: Riddiford Street in Newtown.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

People like price certainty. This might encourage additional cars on CBD streets as people drive to cheaper parking.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Introduce discounted exemption permits for mobility permit holders and EV car-owners

If a second permit is issued for the same household, the second permit is more expensive

Introduce online application and permitting system

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Provide car share, mobility and micro-mobility on-street parking spaces

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. EV owners with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. Businesses located with the zone
6. New dwellings/homes built after 2020
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport route has too many transfers

None of these, I use public transport regularly

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

My overall feedback is that I believe having a Parking Policy misses the point. Parking is just one of many possible uses of a shared public resource. The much larger challenge facing Wellington is how to better use that shared public resource. This policy references other existing or to be drafted policies and states that "If remaining space is available [after safe and efficient movement of people and goods] then the following hierarchy should be considered." This makes it difficult to understand the possible impact of the parking policy, and to provide feedback without visibility to the policies that will provide for the save and efficient movement of people and goods. This draft policy asks the reader to accept an assumed level of progress that seems far from the current situation. This sentence from the 2019 questionnaire highlights the issue: "How should we prioritise use of space on our streets for parking? Street space for the safe and efficient movement of people and goods has already been allocated". As someone who travels primarily by bicycle through Newtown and the CBD I cannot agree that space for the safe and efficient movement of people has already been allocated. One of the questions on the questionnaire, "For streets in the central city, prioritise the following uses of street space" only includes options for parking and urban amenities. No option is provided for the removal of parking to facilitate public and active modes of transport. I believe this policy tinkers at the edges of the significant changes required to meet the stated objectives: "Support shift in type of transport used to active and public transport" and "Safe and efficient movement focusing on people moving along transport routes rather than people parking vehicles". Limiting feedback to parking I would welcome more bike parking (Grey Street is awesome) - but I would gladly sacrifice that for a safe space to travel. I do believe the draft Parking Policy is a step forward. I hope the approved policy will allow the long delayed Newtown Connections to proceed at pace. Kind Regards, — Antony Foster

---

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1.   **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2.   **Are there any objectives you think we have missed?**

not answered

Q3.   **Is there anything else you would like to tell us about the objectives?**

not answered

Q4.   **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5.   **Are there any principles you think we have missed?**

not answered

Q6.   **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I think that car share parks should be generally prioritised over residents' parking, even in residential areas. We should be encouraging people to move away from owning their own vehicle.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I think all on-street parking should increase in cost, to discourage the use of private vehicles. The price could still, of course, go up more in areas of higher demand, and less in areas of lower demand, which would presumably have the same effect in encouraging people to park in areas with lower existing demand over areas of higher existing demand.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

On-street parking should be drastically reduced, especially on key transport corridors, where that space would provide a far greater overall benefit if it were allocated to public or active transport infrastructure.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

Motorcycle parking! More of it urgently!

Q3. Is there anything else you would like to tell us about the objectives?

More motorcycle parking please it's ridiculous how few there are

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

Cars are the problem not motorbikes your document does nothing to distinguish this. Motorbike riders use public transport when it's unsafe to ride. We reduce the congestion but the city isn't supportive-why? Create scooter zones and motorbike zones they are desperately needed.

Q6. Is there anything else you would like to tell us about the principles?

Scooters, bikes, Ebikes, motorbikes we all need space to park!

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Motorcycles are too low in cbd areas

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Some parking should be free

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. New dwellings/homes built after 2020

7. Businesses located with the zone

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I've cycled I've bussed I've trained but now that I ride a motorcycle to work I would never go back it's the best

---

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very unimportant
Support city amenity and safety	Neutral
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

Support Te Atakura. Support becoming carbon neutral.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

Those principles are so abstract and meaningless, it feels pointless to rate them.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?** Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City?**

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?**

not answered

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**   Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

It needs to make driving much more expensive than public transport.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**   1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport is too far from where I live or from my destination

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Neutral
Support safe movement	Neutral
Support business wellbeing	Very important
Support city amenity and safety	Neutral
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

Should be supporting business being closer to home and school. Increasing the capacity of business in the suburbs will decrease unnecessary movement.

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

More parking space is needed in suburbs to create a new environment.

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Resident and short term business parking is critical for a strong Kiwi community. Commuter day parking should be much lower than residents and business. The need for commuter parking reflects a poor transport network.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

The proposed scheme is creating problems for business and encourages commuters to drive every day. Thorndon Quay is an example of this, why are any day parks here. It should residential and business parking.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Businesses located with the zone
4. EV owners with no off-street parking
5. Second permits
6. Other pre-2020 dwellings with no off-street parking
7. All existing dwellings with 1 or more off-street space
8. New dwellings/homes built after 2020

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

New apartments without parking so have no parking allocations with mobility permits.

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

I need my vehicle for work

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Multiple people come with me on this journey

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

The council need to encourage public transport use to reduce commuter parking. Buses for parents to schools. Use tech companies like Uber and Lyft as public transport options. we should be leveraging their private equity to pay the cost for our transport.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Yes, I would like to submit an oral submission

Q1. How important are these objectives to you?

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Neutral
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Whatever you do, do not reduce motorcycle parks

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

None of the above

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. Second permits

5. All existing dwellings with 1 or more off-street space

6. New dwellings/homes built after 2020

7. EV owners with no off-street parking

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport timetable doesn't suit my schedule

Public transport seems unreliable to me

I don't feel safe using public transport early in the morning/late at night

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I used to take the bus regularly but the cost coupled with full buses that do not stop and buses that are always late made it cheaper, less stressful and faster to ride my motorcycle more or walk. Please do not remove any motorcycle parks, we pay a lot in registration compared to cars (most of whom I see with only one occupant) and have much less emissions / environmental impact.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very unimportant
Support safe movement	Neutral
Support business wellbeing	Somewhat important
Support access for all	Somewhat unimportant
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Very unimportant

Q2. Are there any objectives you think we have missed?

Needs of commuters including those who have access and mobility issues

Q3. Is there anything else you would like to tell us about the objectives?

They are not a balanced set of objectives. Clearly aimed against motorists

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Very unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. Are there any principles you think we have missed?

Maximising ability to park and drive from suburban centres. Maximising parking in suburban and CBD shopping areas

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Very faulty thinking about commuter parking in city fringe and suburban centres. Looks like you're trying to kill off retail in these areas.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Price gouging. Shame on the council for suggesting this. Hutt and Porirua will benefit at Wellington's expense.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Second permits
5. New dwellings/homes built after 2020
6. All existing dwellings with 1 or more off-street space
7. Other pre-2020 dwellings with no off-street parking
8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

This scheme looks very complex and liable to encourage gaming.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

I live too far from where I'm going to walk or cycle

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

This feels like another so-called consultation where the options are limited to those the Council already has decided to implement. Really fed up with WCC transport approach.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Would just like the fact that motorcycling numbers has increased and nothing has been done about the number of parking allocation for it in many years, this needs to start budging upwards particularly near office environments.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Businesses located with the zone

4. EV owners with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

Q22. **Do you have any final comments about the topics raised in this submission?**

WCC needs to budge on its motorcycle parking allocation numbers.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

I don't like the concept of special arrangements for certain areas. It appears to be an approach to work outside the policy and targets

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Neutral

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

When answering this I have considered the use of existing parks (not necessarily creating parks). On this basis it's really hard to see why it is okay that micro mobility, active transit and cycling isn't a priority. For example, Thornton quay has a lot of car parks, in my view a reduction in these to be replaced by bus and cycle lanes would be a significant improvement. Wellington would be a better place If there were more amenities, active transport and public transit and less car parks

---

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

None of the above

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Please move things fast and don't support vehicles

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Introduce online application and permitting system

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Second permits
2. Mobility permit holders
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. New dwellings/homes built after 2020
6. EV owners with no off-street parking
7. All existing dwellings with 1 or more off-street space
8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Public transport timetable doesn't suit my schedule

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Tackling these sort of policy problems is never an enviable task. Moving people away from cars to public transport is always difficult especially when cars are or seen convenient. I include myself in this - I've lived in Wellington (Thorndon) for 3 and half years and previously never really felt the need for a car but 3 months ago I decide to buy one and it has been of significant convenience despite the initial and ongoing cost (fuel, parking permit and insurance) to me especially heading Northwards to the Hutt Valley and the Kapiti Coast. I continue to walk into the city centre for work and other things. I overwhelming use my car on the weekends and off-peak if I use it during the week. Could I survive without a car? Sure and I have but people see cars as both a mixture luxury and necessity. What data or studies does the Council, the GWRC, Ministry of Transport and other Wellington regional councils have on commuting patterns and car ownership? A married couple may commute daily by train from Melling but might live in a two car household that congest the region on the weekend including driving in Wellington City. Similarly a flat consisting of three young professionals in Karori might have two cars but still all three flatmates having a high usage of public transport to daily commute. Higher pricing on weekend might dissuade people from venturing into the city combined with better transport links with Wellington and the surrounding areas. In an around about way I'm asking if it might be useful to reshape the themes and principles here. Be clear. Are you talking to people in Wellington about inner city parking and internal city movement? Are you trying to dissuade commuters from using cars either internal to the city or the flow from outside (or both) and you think a parking strategy is a lever to achieve this? Are you concerned more about weekdays or weekends? Are you primarily just aiming to make Wellington a difficult place to own, travel in and park a car in an effort to remove cars from Wellington City?

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

How are ee supposed to know where to park and for how long? Apps?

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1.

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used   Very important

Support safe movement   Somewhat important

Support business wellbeing   Somewhat unimportant

Support city amenity and safety   Somewhat important

Support access for all   Somewhat important

Support move to becoming an eco-city   Very important

Deliver service excellence and a safe working environment   Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system   Very helpful

Prioritise how Council-controlled parking is managed   Somewhat helpful

Ensure that access to the city and suburban centres are inclusive and prioritise those who need it   Somewhat unhelpful

Parking is priced at a level that achieves objectives and is consistent   Neutral

Focus on prioritising existing space, not on increasing parking supply   Very helpful

Provide parking space availability information   Somewhat unhelpful

Align Council operations with the parking policy and report on performance   Neutral

Q5. **Are there any principles you think we have missed?**

Increasing parking enforcement in suburbs to get cars off footpaths, cycle lanes, berms, and bus stops. Setting a targeted rate of reduction for central city car parks per year Stop providing public space for storage of private property (cars) in surburbs

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Private car parking should never be "High" priority. People living in the City Fringe should provide their own storage for their cars.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Minimum price should be set high to ensure that car usage is not encouraged outside of peak times/areas

---

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

If a second permit is issued for the same household, the second permit is more expensive

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Provide car share, mobility and micro-mobility on-street parking spaces

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. Mobility permit holders

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Price should increase to help with creating mode shift.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

It's disappointing that the Newtown Connections and Island Bay cycleway project has been delayed for this. I would hope to see stronger actions to reduce the negative impacts that private car ownership has on our city.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used   Very important

Support safe movement   Neutral

Support business wellbeing   Neutral

Support city amenity and safety   Somewhat important

Support move to becoming an eco-city   Neutral

Deliver service excellence and a safe working   Very important
environment

Q2. **Are there any objectives you think we have missed?**

Efficiency of movement on arterial/main roads

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Q5. **Are there any principles you think we have missed?**

Pricing of car park hire should reflect demand, both spatially and at times of day.

Q6. **Is there anything else you would like to tell us about the principles?**

Car park pricing should be more dynamic, so that standard car park prices in the central city are more expensive when
there is the highest demand for them, with the aim that for each area, 10% of standard car parks are generally always
available. And when car park demand is low, prices should be low, or free. This is a good balance between maximising the
monetary benefit to the council and the utility to car drivers.

Q7. **Key Transport Routes (such as Lambton**   Strongly agree
     Quay, Thorndon Quay, etc.)High parking
     space priority: bus stops.Low parking
     space priority: urban design features, mobility
     parks, loading zones, bicycles/micro-mobility
     parks, car share parks, EV charging parks,
     short stay parks, small passenger service
     vehicles/taxi stands, motorcycle parks then
     public bus layovers.Lowest parking space
     priority: bus/coach parks, residents parks, then
     commuter parks.To what degree do you think
     we have this correct for key transport routes?

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?   Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Sounds fantastic. Refer to my earlier comment saying this is the best way to balance council income with car user utility.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce online application and permitting system

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

If a second permit is issued for the same household, the second permit is more expensive

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. EV owners with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. New dwellings/homes built after 2020
6. Businesses located with the zone
7. Second permits
8. All existing dwellings with 1 or more off-street space

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule

Public transport route has too many transfers

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

Specific reference to becoming carbon zero, being 'an ecocity' is vague. Prioritising transport modes, in order to achieve the above the Council needs to prioritise transport - and adopt the internationally recognise transport hierarchy, which prioritise in this order; walking, cycling, public transport, commercial vehicles, taxis, high occupancy, single occupancy. With e scooters, motor bikes, disability vehicles slotted in.

Q3. **Is there anything else you would like to tell us about the objectives?**

Again access for all is vague, is this equal access, equitable access,

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Neutral

Q5. **Are there any principles you think we have missed?**

Need to decrease parking for private vehicles in central city, (but increase disability parking, motorbike, cycle parking) so as to reduce the number of private vehicles coming into the city. NO Free / low cost parking any where with CBD or nearby suburbs, eg Glenmore st, or on key arterial roads - Kent / Cambridge terrace, Taranaki st. In suburbs there needs to be a significant reduction in 'free parking', with residents only parking and fees, how these fees are paid should be flexible, eg monthly AP or one off, so as to be affordable to people on low income.

Q6. **Is there anything else you would like to tell us about the principles?**

Parking in private apartments, office buildings add significantly to the amount of parking and traffic into the city and all new developments need to have compulsory cycle parking. In fact, we need much more cycle parking, take out soem car parks and use the space for cycles, e scooters instead on cluttering up pavements.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking**High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

What's with urban design features everywhere?? Do these need to be on roads, surely pavements, parks etc are better spaces. Why do we have any parking on the road on major transport routes bicycle and micro-mobility can fit on pavements in some of these places and most have side streets where motorbikes, disability parking and delivery can go. This happens in so many cities overseas and everyone manages. Finally why have we no options of motor vehicle free CBD and subusrban shopping areas, again this is VERY common overseas. And is really good for businesses,shops cafes etc.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Just reduce parking and have no private motor vehicles from Beehive to Courtney place - great er parking for motor bikes, delivery and disability vehicles on side streets, with good bike, micro mobility parking.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. EV owners with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. Pre-1930s houses or pre-1940s apartments with no off-street parking
6. New dwellings/homes built after 2020
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

This has to be integrated with a better and more reliable public transport system , safe secure cycle lanes, so that people are able to use these alternative forms of transport. The current situation has many households having more vehicles than they really need because there is free parking outisde their house. Also places like the hospital, University, need to take responsibility for parking of employees, students instead of which areas like Newtown become one big free car park .

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Why does the council keep repeating consultations, I answered a whole heap of these questions or similar a while ago. Meanwhile, NOTHING happens. Congestion gets worse, buses cant be on time because of parking and congestion and its still not safe to cycle.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Neutral
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Second permits

7. Businesses located with the zone

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Prioritise the views and interests of residents over commuters

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

This is meaningless unless you tell us a. What "urban design features" means; and b. The public transport environment in which these answers are assumed to be given. Public transport to the inner city is poor, but public transport from the inner city to the outer areas in weekends is non-existent.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

It should apply equally for all types of personal transport vehicle. In terms of occupying public space there is no difference at all between a private internal combustion car, an ev, a motorcycle, a bicycle, a taxi or any other ride-share service.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Businesses located with the zone

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. EV owners with no off-street parking

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Provision of small spaces for motorcycle parking in a residents parking scheme. The old excuse that motorcycles can't display a sticker no longer applies in the world of smart phones.

Q20. **What deters you from using public transport? Please select all that apply.**

I need my vehicle for work

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

Support a move away from cars specifically

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat unhelpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I dont understand any of these questions. I think you should remove ALL private vehicles from the city centre

---

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Keep parking the same price but reduce the max time and limit the amount of parks while increasing wardens

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Mobility permit holders

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Max one permit per residence, if the residence has off street parking they do not qualify for a permit. Special importance placed on mobility parking, EVs

---

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

Public transport seems unreliable to me

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very unimportant
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

No

Q3. Is there anything else you would like to tell us about the objectives?

When talking about parking, you are talking about roads, roads are unsafe by nature so very difficult to balance safety and access.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very unhelpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

Increase parking supply

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Resident Parking needs to be a priority as well as both short and long term parking

---

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. All existing dwellings with 1 or more off-street space

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. New dwellings/homes built after 2020

5. Second permits

6. Businesses located with the zone

7. Mobility permit holders

8. EV owners with no off-street parking

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

Why no focus on increasing car parking? Crazy that there is no focus to build more car parking facilities

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Support for needs for space, nature and open areas for physiological and cultural wellbeing

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

Free public space allocated to parking and other needs and priorities high capacity transport over motor cars (with peak occupancy of 1.3 on average and 95% of the time parked with 0 occupants)

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. Council's Central City Off-Street Parking **High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Remove all requirements for parking g spaces from the district plan. Allow people to build houses, etc without having to allow for 1950s transport options. Ban cars from the city centre and suburban centers. E.v. are not the solution. The space requirements of cars are unchanged and given 75% of particulate pollution for car use does not come from the exhaust pipe changing the fuel is a sop to keep car manufactires in business

---

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

As part of the rates demand letter inform people what percentage of rates subsidises the private car (road cost, parking, etc plus increased cost of 3 waters due to car-induced sprawl, etc) and what percentage of the city is unrated (roads). Similar to the information about public transport subsidies.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Other pre-2020 dwellings with no off-street parking

4. All existing dwellings with 1 or more off-street space

5. Pre-1930s houses or pre-1940s apartments with no off-street parking

6. New dwellings/homes built after 2020

7. EV owners with no off-street parking

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

The only priority IMHO should be where there is no reliable public transport option or a Dr's cert indicates the person cannot use public transport. Everyone else should carry all costs - economic and otherwise of deciding to own and use a low capacity transport option

---

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

We need to start with planning g rules that encourage car usage. And then actively make decisions that remove cars from high density areas and replace them with high capacity options.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very unimportant
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

business should be the last to consult with regarding parking and transport. businesses consistently underestimate the value of walking on their business and overestimate the positive impact parking and cars have.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

increasing the price of parking relative to demand means less corollas and more maseratis on the street. the rich literally don't care how much a park costs - they will simply pay it. Some bourgeoisie i know will just pay the $80 fine for overstaying in a park. there are other ways to encourage people to not drive in - making public transport good is a great start.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

residents parking is the weirdest thing - you are essentially subsidizing land owners who are using a public good (roads) for private gain. As for houses built in the 20s and 30s with no specific on street parking: what did the old residents use to do? They walked to work. They bussed to work. They cycled. If youre living in Mt Vic, its reasonable to NOT expect the council to subsidise a carpark for you.

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

be bold and brave - its time to reduce the number of parks in our city and replace them with lanes for busses, cycles and public transport.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

- Support the creative culture and heart of the city. - Support a measured and balanced transition until the infrastructure is capable of dealing with these shifts

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Prioritising replacing all the parking that has been lost in recent years to call the parking buildings that have been closed.

Q6. Is there anything else you would like to tell us about the principles?

There needs to be a staged approach. The council needs to resurrect the parking that has been lost as otherwise you'll discourage people from coming into the city full stop which will impact jobs and businesses. People are already discouraged from coming in due to these huge losses in parking and the fact the public transport is a mess.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

All these questions ignore the key issue. If public transport is not adequate which it currently isn't then you need to provide carparks for people to use otherwise they won't come into the city. Therefore you need to focus on replacing the parking buildings that have been lost such as James Smiths, Michael Fowler etc. People need to have a place for longer term parks if we want them to visit cafes and restaurants and retail stores. Otherwise you will drive them out of the city and nobody wins. It needs a more measured approach. Also get rid of taxi stands. Everybody used ride share these days. This will free up a lot of parks.

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

People need certainty. Yes this might work for Uber but you don't have a choice you need to pay the surge price if you want to get home. However for parking retailers will suffer with this approach as people will try and park then realise it is to expensive and then not park or visit that retailer or cafe and the business will ultimately suffer. It will also mean it will leave a negative feeling customer parking and will discourage them from coming into the city. This is a policy that will drive people out of using the central city and push people to malls.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Using public transport is difficult when travelling with young children/babies

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

I have to make multiple stops or multiple journeys

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Don't throw the baby out with the bath water. Instead of making things mutually exclusive focus on improving public transport but don't get rid of all the parks until you've done that. In the short term replace the parking buildings otherwise you are going to ultimately kill all the central city business and discourage people from coming into the city and it will lose its vibrancy and ultimately you'll lose the rates base. People will start going to the malls and suburbs where they can get a park. We have a great culture and heart in the central city in Wellington so lets protect it but take a measured approach and we work through the transition. It is not viable for all people to only use public transport.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Decrease car/truck/ute/van numbers within both urban and suburban areas.

Q3. **Is there anything else you would like to tell us about the objectives?**

You have completely missed an opportunity to support congestion reducing transport means. Bus only lanes, cycle lanes, rapid transit and motorcycles are all amazing means of transport which reduce congestion. Especially supporting motorcycle parking as 6-10 motorcycles can park in the same space as a single car. Resulting in a maximum reduction in parking usage of 9 vehcile spaces and a minimum of 1 (if the car had 5 occupants). You need to stop sticking your head in the sand and support motorcyclists!

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very unhelpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Motorcycle parks should be prioritised in all areas in and around the CBD. These are the most efficient parking spaces for people per m2. Encouraging motorcycle parkingin the CBD takes pressure off the remaining parks. It is a fact that if you support motorcycle parking in your city, you will see greater numvers of commuters etc using motorcycle parks which will free up car parks in other areas, Effectively increasing the parking stock without changing the physical area dedicated to parking!

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This is a terrible idea. Using the economic principles of demand exceeding supply to generate revenue is not the job of the council. The council's job is to provide the infrastructure to support the community not to force the community to fit within the unacceptable infrastructure by hitting the everyman in his/her wallet!

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. New dwellings/homes built after 2020

5. All existing dwellings with 1 or more off-street space

6. Second permits

7. Businesses located with the zone

8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

EV's have no impact on parking - they still use 100% of a space. they should not be treated any different to petrol or diesel vehicles.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

The public transport within wellington city is a joke because its only really busses so its choked by the traffic that WCC refuses to address. One EASY WIN on traffic is to support motorcycle use in Wellington by providing addiitonal motorcycle parks and allowing motorcycles to use normal parking spaces by paying the agreed fee. It is a JOKE that a motorcyclist cannot park in a standard street park EVEN if they pay the parking fee! WHAT A JOKE!

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Introduce online application and permitting system

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. New dwellings/homes built after 2020
4. All existing dwellings with 1 or more off-street space
5. Other pre-2020 dwellings with no off-street parking
6. Businesses located with the zone
7. EV owners with no off-street parking
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

I don't feel safe using public transport early in the morning/late at night

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

If a second permit is issued for the same household, the second permit is more expensive

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

There are a number of specific roads that need to be cleared of car parks of any kinds so that buses in particular can get through. I am thinking of areas like Mt Victoria and Roseneath that have narrow streets but there will be other similar parts of town.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Better to have pricing stay at same amount, either set low or high.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. Businesses located with the zone

5. New dwellings/homes built after 2020

6. All existing dwellings with 1 or more off-street space

7. EV owners with no off-street parking

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Quite a few of the issues raised could be helped by a good public transport service. We have a pretty mediocre one at present.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

The objective of becoming an eco-city seems a bit vague or idealistic - simply lower emissions of CO2 and other pollutants would be more specific

Q3. **Is there anything else you would like to tell us about the objectives?**

The need to make cycling a practical choice for able bodied people should be highlighted due to environmental and health benefits. Currently people nee dot be fairly bold to cycle most places.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1.

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Neutral
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Efficient use of current space

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Many people currently use motorcycles/scooters to get to work/shop/visit locations (myself included) where public transport is impractical/expensive/non existent & talking is too far. To be frank my motorcycle takes up next to no space, especially compared to a car on both the road & the carpark. This eases congestion & demand for parking. You CANNOT reduce parking spaces for motorcycles. Sure cycling is preferable but there are a lot of hills in wellington & sometimes that's just not practical. A motorcycle is the next best thing. They are very small & significantly better for the environment than a car. They should be high in the priorities in town.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. New dwellings/homes built after 2020
3. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Motorcyle/Scooter parking in available spaces

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport is too far from where I live or from my destination

I have to make multiple stops or multiple journeys

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

Motorcycles/scooters are very small & take up very little space. They need to be considered an option. There are many locations in Wellington that I often travel to where there is no bus route, or the bus route would take literally hours longer than driving. Currently I have a motorcycle to get to these places (hiking tracks, beaches, shopping in other suburbs) & if I had to start paying for motorcycle parking, I would just buy a car. Which takes up more space & is worse for the environment.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Neutral
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

What concerns me is the definition of what is above. What do they mean? What I consider to be safe may be different to someone else and also very different to what the council interprets as safe.

Q3. **Is there anything else you would like to tell us about the objectives?**

They are a bit waffly. Of course we want a more sustainable city but there are many ways to interpret your objectives. Come could say that it is safer if we are all in high safety spec cars...

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Not really, they are all waffly and don't really give an idea of how this will be achieved. Why isn't council operations with the parking policy and performance already aligned? What does support local area-basd parkign plans where there is need and support. does this mean consultation (and listening to) local residents? If only this were true.

Q6. **Is there anything else you would like to tell us about the principles?**

I am concerned about 'managing the decreasing council controlled parking'. Is this because the parks are being sold of? Or because they are being built on (Car park of MFC), or rented to high quality hotels (DoubleTree hotel owned by the HIlton)? OR because they are being turned into residents parking or bike parks (approve of this one).

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Why are car share parks a low priority on council parks, sporting and community facilities Surely this is a way to have fewer cars. I have disagreed with all these proposals as I am not sure what 'urban design features' have to do with parking spaces. Does that mean fancy car park signs, take out car parks and put in planter boxes? When did Lambton Quay become a 'key transport route' with the likes of Thorndon Quay? Is not Lambton Quay /central city? Some definition required here before sensible comment can be made.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Having a price differential will mean cars trawling longer for cheaper parks rather than just finding a park. Isn't it better for cars to drive to a place with a park and then stop. There is already a price differential with less expensive parks in the outer areas. Will those parks leased to Doubletree have the same differential applied to them as that is prime downtown parking space? Having a price differential leads to uncertainly of trips and just messes with peoples timing, plans and if inconvenient.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Provide car share, mobility and micro-mobility on-street parking spaces

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Second permits

6. All existing dwellings with 1 or more off-street space

7. EV owners with no off-street parking

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Public transport is too expensive

Public transport is too far from where I live or from my destination

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

To be honest, I think there are more important things to worry about than parking. The new bus system is a nightmare for users and non users and other road users. The money would be better spent on infrastructure and getting damaged buildings up and running again.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Very unimportant
Support business wellbeing	Very unimportant
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

I think there needs to be more of a focus on the impact each person has on how they get to work. A person who drives a car will take up MORE space and will create MORE pollution than someone who is to ride a motorcycle or a moped to work. Grouping these transports together is unfair, as they are not equivalent. One is smaller, cheaper to operate, takes up less parking space and is more eco friendly. I understand there is a need to conserve space, but you also need to understand you can't force everyone to move to ride sharing or public transport solutions. Those who are using motorcycles are TRYING to make an improvement over using and parking a car in an already busy city.

Q3. Is there anything else you would like to tell us about the objectives?

I think there has been a severe oversight in how vehicles and their economy on the environment are being judged. My main point around this submission is the use of motorcycles and motorcycle parking. In your proposal, you have grouped four wheeled private vehicles and motorcycles/mopeds into the same category, which is nonsensical as per my above statement. As per a study done in Vietnam, parking standards suggest a standard area of 25 m2 per car and 2.5 to 3.0 m2 per motorcycle, or about 8 to 10 motorcycle spaces per car space (Vietnam Ministry of Construction 2004). People who ride a motorcycle or moped to work instead of a car are making an active effort to reduce their carbon footprint by 1) Taking up less parking space. 2) Parking Closer together 3) Polluting the environment less (motorcycles are now fitted with Catalytic Converters, and are Euro4 Compliant). As a result of this, it is my strong opinion that motorcycle parking should remain available and completely free. The size of most motorcycle parking around the Wellington CBD is the space of around 3-4 carparks. In those spaces, you can fit around 40 motorcycles if everyone parks correctly. Both motorcyclists and the WCC benefit from this, as this leaves more space for other developments (ie Carparks, or mobility parks). It is also important to note there is already a heightened cost of adopting a motorcycle as a primary method of transport (expensive licencing/registration). Further costs by means of parking or reducing the amount of parks available will put financial strain on myself - a direct result of inducing another cost onto people who are already trying to make better decisions in terms of the environment and conservatism. I am not lobbying for MORE motorcycle parking - I think the amount that we have at the moment is suitable. Your statements in the policy about motorcycle bays not being filled is biased and incorrect. The area where I work (waterfront) ALWAYS has the motorcycle bays filled - and I will be extremely disappointed if this data sampling was conducted on one area only, but will be enforceable across all of Wellington CBD where the usage may not be the same. I use a motorcycle as my primary transport method to work. I don't want to own a car, as I think It is overkill for a city where you can get most places on foot; HOWEVER there is a need for longer distance travel for people like myself who live too far to walk - but don't want to own a car - and don't want to rely on a public transport system which is both expensive and unreliable. I strongly urge WCC to consider the above points if looking at a new parking policy. There is a strong community around Wellington that will be happy to have these discussions in person.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very unhelpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very unhelpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

---

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?   Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. Outer Residential Areas High parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community Facilities High parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Strongly Agree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I think there needs to be more of a focus on the impact each person has on how they get to work. A person who drives a car will take up MORE space and will create MORE pollution than someone who is to ride a motorcycle or a moped to work. Grouping these transports together is unfair, as they are not equivalent. One is smaller, cheaper to operate, takes up less parking space and is more eco friendly. I understand there is a need to conserve space, but you also need to understand you can't force everyone to move to ride sharing or public transport solutions. Those who are using motorcycles are TRYING to make an improvement over using and parking a car in an already busy city. I think there has been a severe oversight in how vehicles and their economy on the environment are being judged. My main point around this submission is the use of motorcycles and motorcycle parking. In your proposal, you have grouped four wheeled private vehicles and motorcycles/mopeds into the same category, which is nonsensical as per my above statement. As per a study done in Vietnam, parking standards suggest a standard area of 25 m2 per car and 2.5 to 3.0 m2 per motorcycle, or about 8 to 10 motorcycle spaces per car space (Vietnam Ministry of Construction 2004). People who ride a motorcycle or moped to work instead of a car are making an active effort to reduce their carbon footprint by 1) Taking up less parking space. 2) Parking Closer together 3) Polluting the environment less (motorcycles are now fitted with Catalytic Converters, and are Euro4 Compliant). As a result of this, it is my strong opinion that motorcycle parking should remain available and completely free. The size of most motorcycle parking around the Wellington CBD is the space of around 3-4 carparks. In those spaces, you can fit around 40 motorcycles if everyone parks correctly. Both motorcyclists and the WCC benefit from this, as this leaves more space for other developments (ie Carparks, or mobility parks). It is also important to note there is already a heightened cost of adopting a motorcycle as a primary method of transport (expensive licencing/registration). Further costs by means of parking or reducing the amount of parks available will put financial strain on myself - a direct result of inducing another cost onto people who are already trying to make better decisions in terms of the environment and conservatism. I am not lobbying for MORE motorcycle parking - I think the amount that we have at the moment is suitable. Your statements in the policy about motorcycle bays not being filled is biased and incorrect. The area where I work (waterfront) ALWAYS has the motorcycle bays filled - and I will be extremely disappointed if this data sampling was conducted on one area only, but will be enforceable across all of Wellington CBD where the usage may not be the same. I don't want to own a car, as I think It is overkill for a city where you can get most places on foot; HOWEVER there is a need for longer distance travel for people like myself who live too far to walk - but don't want to own a car - and don't want to rely on a public transport system which is both expensive and unreliable. I strongly urge WCC to consider the above points if looking at a new parking policy. There is a strong community around Wellington that will be happy to have these discussions in person.

Q15. **Do you agree with this pricing approach?**   No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

I don't have a bike or want to purchase one

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

I think there needs to be more of a focus on the impact each person has on how they get to work. A person who drives a car will take up MORE space and will create MORE pollution than someone who is to ride a motorcycle or a moped to work. Grouping these transports together is unfair, as they are not equivalent. One is smaller, cheaper to operate, takes up less parking space and is more eco friendly. I understand there is a need to conserve space, but you also need to understand you can't force everyone to move to ride sharing or public transport solutions. Those who are using motorcycles are TRYING to make an improvement over using and parking a car in an already busy city. I think there has been a severe oversight in how vehicles and their economy on the environment are being judged. My main point around this submission is the use of motorcycles and motorcycle parking. In your proposal, you have grouped four wheeled private vehicles and motorcycles/mopeds into the same category, which is nonsensical as per my above statement. As per a study done in Vietnam, parking standards suggest a standard area of 25 m2 per car and 2.5 to 3.0 m2 per motorcycle, or about 8 to 10 motorcycle spaces per car space (Vietnam Ministry of Construction 2004). People who ride a motorcycle or moped to work instead of a car are making an active effort to reduce their carbon footprint by 1) Taking up less parking space. 2) Parking Closer together 3) Polluting the environment less (motorcycles are now fitted with Catalytic Converters, and are Euro4 Compliant). As a result of this, it is my strong opinion that motorcycle parking should remain available and completely free. The size of most motorcycle parking around the Wellington CBD is the space of around 3-4 carparks. In those spaces, you can fit around 40 motorcycles if everyone parks correctly. Both motorcyclists and the WCC benefit from this, as this leaves more space for other developments (ie Carparks, or mobility parks). It is also important to note there is already a heightened cost of adopting a motorcycle as a primary method of transport (expensive licencing/registration). Further costs by means of parking or reducing the amount of parks available will put financial strain on myself - a direct result of inducing another cost onto people who are already trying to make better decisions in terms of the environment and conservatism. I am not lobbying for MORE motorcycle parking - I think the amount that we have at the moment is suitable. I strongly urge WCC to consider the above points if looking at a new parking policy. There is a strong community around Wellington that will be happy to have these discussions in person.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

Increase number of parks available for motorcycles as part of encouraging more efficient traffic solutions as opposed to cars.

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

Council's existing parking policies are draconian and insensible, and they do not contribute to a user-friendly transport experience — especially for motorcycle riders, who are inexplicably disallowed from using paid car parks and forced to compete for scarcely available dedicated motorcycle parking, which Council is now audaciously proposing to *charge* people for!

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly disagree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Motorcycle parking should be a high priority in all areas. You can fit four motorcycles in the same area that a single car would use. And if you charged for use of *spaces* rather than on a per-vehicle basis, you wouldn't lose any money at all by doing so.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

First of all, I don't believe Council has any business charging for parking in the first place. Residents pay rates for Council to maintain these facilities. I know for a fact that maintenance of parking facilities is very close to zero cost; the main financial outlay is in parking enforcement. Council is only charging for vehicle usage of car parks as a semi-punitive measure to essentially discourage long-term usage of these assets. More specifically, I strenuously disagree with any proposal to charge motorcycle users for use of car parks.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Introduce online application and permitting system
Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. New dwellings/homes built after 2020

5. EV owners with no off-street parking

6. All existing dwellings with 1 or more off-street space

7. Second permits

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

Wellington City Council already does not provide adequate parking for motorcycle riders; attempting to find a space after 8:30am on a weekday is utterly futile. It is ridiculous that motorcycle riders can't make use of paid car parks without the risk of a parking infringement. It is also baffling that we aren't allowed to park on footpaths, like riders in Australian cities are allowed to do. The inadequacy of existing parking schemes is bad enough, but now Council is proposing to *charge* us to use these completely inadequate facilities? No. That is unacceptable. WCC needs to *encourage* motorcycle usage rather than going out of its way to actively *discourage* it. Whether on the road or in a car park, you can fit anywhere from 4 to 6 bikes in the same space taken up by a single car. More people riding bikes means more people able to use the existing road network with less traffic snarls — witness how efficiently two-wheeled traffic moves in Asian countries. *That* is how you're going to "get Wellington moving", not by actively putting more roadblocks in the way of people using more efficient modes of mechanised transport.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very unhelpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

not answered

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

If a second permit is issued for the same household, the second permit is more expensive

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. New dwellings/homes built after 2020
6. Businesses located with the zone
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

Public transport route has too many transfers

I have to make multiple stops or multiple journeys

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Mobility permit holders

3. Other pre-2020 dwellings with no off-street parking

4. EV owners with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. New dwellings/homes built after 2020

7. Businesses located with the zone

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Using public transport is difficult when travelling with young children/babies

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Neutral
Support business wellbeing	Somewhat important
Support city amenity and safety	Neutral
Support access for all	Neutral
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

No

Q3. **Is there anything else you would like to tell us about the objectives?**

Objectives look loaded with an agenda so treating with caution

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Council track record of previous attempts

Q6. **Is there anything else you would like to tell us about the principles?**

Council track record needs to be included.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

No.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Pricing range needs to be included before committing answer

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. EV owners with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. All existing dwellings with 1 or more off-street space
6. Businesses located with the zone
7. New dwellings/homes built after 2020
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

No.

Q20. **What deters you from using public transport? Please select all that apply.**

I need my vehicle for work

Other (please specify)

Public transport is too expensive

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

There are many surveys of the benefits of using PTW's, yet the council have consistently refused to acknowledge them. Because of this, I (and others) have a lack of trust in the Council's ability to govern.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Somewhat unimportant
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Neutral
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

Yes. Reducing commute costs AND reducing commute time for pushing people into Public Transport. Even commuting via public transport from Karori can take 1.5 hours of UNPAID time every day, costing close to $45 per week for some. Assuming 4 weeks of leave per year, that means 360 unpaid hours per year just to travel 5km. We have a limited life expectancy and people waste it without worry for some reason. Well-being is important, and getting more of our time back is key to that.

Q3. **Is there anything else you would like to tell us about the objectives?**

"This means moving more people using fewer vehicles..." is a narrow-minded approach to the problem and not a one size fits all solution. Consideration needs to be given to well-being and personally, cramming everyone into those tin-can buses with disrespectful and outright dangerous drivers is not a given solution. A multi-tool approach needs to be considered to reduce congestion, not reduce the number of vehicles. What about rebates for carpooling? Or encouraging motorcycle usage instead of a car for a single commuter? What about improving road layout in unsafe areas to drive movement through? Think of ways to minimise time spent commuting, which eats time out of our lives for no other reason than "that's the way we've always done it". Why not reduce load by offering rate reductions for businesses and firms that encourage their staff to work from home and reduce the number of commuters? Or incentivise business growth outside of just the CBD, and make better use of space available in the Hutt?

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Communicating pricing plans to vulnerable/affected groups? Motorcyclists for one are a minority of ratepayers and voters and as such are at risk of being bludgeoned into submission on pricing with no recourse at the voting booth against Councillors who don't have to worry about any political fallout of their decision.

Q6. **Is there anything else you would like to tell us about the principles?**

They appear more targeted towards politely describing ways to gather revenue without doing any actual work than actually doing work with the resourcing you currently have.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Motorcycle parking needs to be elevated into high priority for the city center due to their relatively low footprint per vehicle commuter compared to things like taxi ranks and car parks. Suburban areas should also allow for motorcycle parking as an elevated priority because most residences are flat-shares with limited garage space for people to have independent transport.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I only agree in principle if commuters can have consistency in information of pricing ahead of time. The question is worded in a way to make it impossible to disagree but the fact of the matter is that demand is high because there is no supply and supply has been reduced in recent years with no effort on the council's part to rectify that.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Introduce discounted exemption permits for mobility permit holders and EV car-owners

If a second permit is issued for the same household, the second permit is more expensive

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Mobility permit holders
5. New dwellings/homes built after 2020
6. Businesses located with the zone
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport seems unreliable to me

Public transport route has too many transfers

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Don't charge for motorcycle parking. We are already charged enough for everything else - why screw the little guy over even more?

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

Reducing emissions

Q3. Is there anything else you would like to tell us about the objectives?

'Support business wellbeing' is much to vague in this context. You could spin that however you pleased.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

Combating emissions and climate change

Q6. Is there anything else you would like to tell us about the principles?

Land use, transport, and emissions are very tightly linked together. It ought to be explicit that managing parking will assist in meeting climate goals

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Cycling should never be in the lowest priority sections. Please always make it medium if it is not going to be high.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

It's a good principle, but ideally we would also see cheaper bus fares so there is a real alternative to driving and parking.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Other pre-2020 dwellings with no off-street parking

5. Pre-1930s houses or pre-1940s apartments with no off-street parking

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Bicycle parking is sorely needed but you have to match it with safe cycling lanes and you have to start building those immediately!

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very unimportant
Support safe movement	Somewhat unimportant
Support business wellbeing	Very important
Support city amenity and safety	Neutral
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Very unimportant

Q2. Are there any objectives you think we have missed?

There should be an objective around cost and not burdening users. Often low wage people require private car for work, and for larger families it is often cheaper than public transport. I would also like to see a reduction in enforcement.

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat unhelpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very unhelpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

Again you are looking at pricing to achieve your objectives with little thought of the impact on individuals it will affect.

Q6. Is there anything else you would like to tell us about the principles?

Given the state of public transport, how do you know you won't have to change your plans again. Surely this should be part of the wider public transport policy including will public transport be made cheaper to encourage more usage.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I don't know what Electric vehicles which are cost prohibitive more many individuals should be given priority over other vehicles. You are penalising individuals as they can't afford this technology. Key transport routes already have ample bus stops, this indicates you want to increase the number of these. Micro-mobility gets moved around the city, it seems pointless to have a spot you need to take it to, people will not use it. I don't know what a car share park is but car sharing plans have not really worked around the world I am not sure what makes you think it will work here.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This would be very confusing for everyone especially with pricing changing. The price of the parking would impact peoples decision if they will make the trip or not but the price won't be known until they arrive. Again why are the areas of high demand do these include places of health services (doctors, social services, psychologists, dentists, physiotherapists). This creates another barrier to people accessing these services.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Other pre-2020 dwellings with no off-street parking

3. New dwellings/homes built after 2020

4. Second permits

5. Pre-1930s houses or pre-1940s apartments with no off-street parking

6. Businesses located with the zone

7. All existing dwellings with 1 or more off-street space

8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I don't think it should matter when your house was built your allocation of parks. Though I assume you are requiring houses built after 2020 to provide off street parking. We are also a city of flatters and this doesn't seem to account for the actual number of cars per household. Also no exemption for electric vehicles, this again penalises those who can't afford such a car. If Businesses have set up in these zones they need to be aware of parking when they set up, they should not be exempt either.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

I think in times of economic hardship ahead, it seems very foolish to look at adding more significant costs for people to access services or retail in the city. I am very against benefits given to low carbon/electric vehicles as this is just more discounts for the wealthy at the expense of lower income households. I don't think parking should be viewed as an income earner for the council which I not this doesn't talk at all about what the income from parking is currently used for or would be used for in the future.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Promoting community engagement and increase in available public spaces

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

As noted in the hierarchy, parking for private vehicles should be the lowest priority, particularly on key transport links and in the central city.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Key transport links such as Lambton Quay/ Willis st/ Manners St are often key transport links because they are surrounded by dense retail, hospitality, office and residential areas. Prioritisation of micro mobility and active transport end of trip facilities should also be equal to bus stops. 5 minute drop off facilities for taxi/ ride share should be a medium priority, enabling more people to use modes other than private car that suit them. This would better align with the broader transport outcomes for Wellington.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Increased income from parking should be ring fenced for transport and urban design projects to further encourage mode shift.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce online application and permitting system

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Other pre-2020 dwellings with no off-street parking
4. EV owners with no off-street parking
5. All existing dwellings with 1 or more off-street space
6. Second permits
7. New dwellings/homes built after 2020
8. Businesses located with the zone

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule
Public transport is too expensive
Public transport seems unreliable to me

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

Roads should be prioritised for moving people from place to place around the city. Core transport links should use all available space for moving people (with bike and micro mobility parks where appropriate). Clearways should be removed completely and be replaced with no parking zones.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Priority for pedestrians

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

Remembering that rate payers own cars and have a right to park outside their property without being robbed blind for the 'privilege'. Stop treating car drivers as 3rd class citizens.

Q6. Is there anything else you would like to tell us about the principles?

You can't forget that cars are still being driven and that not everything can be achieved via public transport - mass or otherwise.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street Parking**High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

You COMPLETELY fail to recognise resident parking as a PRIORITY for inner city dwellers. I live in the city. I drive a car. I need a park. I pay a lot of money towards rates. I pay a lot of money for a resident permit with absolutely NO guarantee of a park. This is wrong! You cannot keep treating car drivers as 3rd class citizens - Green leaning Council or not!

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Costs to park in the city are exorbitant enough as it is! Just set a flat, low rate across all precincts and you might encourage more people in to the city.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Mobility permit holders
3. Other pre-2020 dwellings with no off-street parking
4. EV owners with no off-street parking
5. New dwellings/homes built after 2020
6. Second permits
7. All existing dwellings with 1 or more off-street space
8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

How about you stop using us as a cash cow for your Green leaning Council? We pay rates and pay for a permit and should have every right to be able to park our car near our home. Some of us need a car for our lifestyle - whether that be because we are disabled, have children, pets who can't travel on an e-scooter to the vets etc. Stop penalising us. Stop issuing permits to houses that have off street car parking. Increase the amount of resident parking on really busy streets like Elizabeth St.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I need my vehicle for work

I don't feel safe using public transport early in the morning/late at night

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

---

Q22. **Do you have any final comments about the topics raised in this submission?**

Stop penalising car drivers! I'm sick of paying large amounts of money to park outside the house I pay rates for. It's not my fault it is pre-1930s and it's where I choose to live. No glib comments about moving elsewhere either. That's just arrogance.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Very unimportant
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Very unimportant
Support access for all	Very unimportant
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Very unimportant

Q2. **Are there any objectives you think we have missed?**

Yes Reducing/removing car parking on Wellington streets is essential Removing car parking along Adelaide road particularly the Newtown end which is very narrow would help cycle safety and encourage more public transport use

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

Yes Increase all street parking substantially for cars This is VIP to meet WCC objectives

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

not answered

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Yes VIP to increase the price for car parking substantially This will discourage car use and meet WCC objectives

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. All existing dwellings with 1 or more off-street space

4. Businesses located with the zone

5. Other pre-2020 dwellings with no off-street parking

6. Pre-1930s houses or pre-1940s apartments with no off-street parking

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Yes Reduce/limit the number of street car parks available This will ensure less cars in Wellington as residents will use public transport or cycle

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

There are too many cars in Wellington Reducing/ limiting the number of street car parks will discourage car ownership and promote public transport and cycling

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This option would only be supported (and useful) if pricing information was available to the person driving into the city before they drove into the city. Once they are there and the price has surged it's too late and looks like price gouging. The technology is unlikely to be there to support this and pricing would surge within the travel times for people getting to said parks

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Residence parking needs to be greatly reduced from what it is today

---

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used — Somewhat unimportant

Support safe movement — Very important

Support business wellbeing — Somewhat unimportant

Support city amenity and safety — Neutral

Support access for all — Somewhat important

Support move to becoming an eco-city — Somewhat important

Deliver service excellence and a safe working environment — Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?** — Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

The central city parking priority for motorcycles is completely wrong relative to the proposed priorities. Far more motorcycles/scooters can fit in a single space than any vehicle, including ride-share, electric, taxi, etc. This mis-prioritisation is probably due to the nonsensical placement of motorcycles alongside private cars in the transport hierarchy in section 2.2.1 of the policy statement. In reality, motorcycles should be just above ridesharing and pool vehicles as they are low-emission, take little space to park, and facilitate more smooth flow of traffic.

Q15. **Do you agree with this pricing approach?**   No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Charging for motorcycle parking is silly and counter to everything which the Council purports to be trying to achieve. We should be encouraging as many people as possible to ride on two wheels. Absent a reliable, efficient public transport system (and make no mistake, ours is neither reliable nor efficient), anyone who does not live within walking distance of their job needs to be able to drive into town. It is infinitely preferable to have 10 motorbikes vs 10 cars. Or 10 bicycles and 10 motorbikes vs 20 cars.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**   1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

Public transport seems unreliable to me

Public transport route has too many transfers

Using public transport is difficult when travelling with young children/babies

Other (please specify)

I have to make multiple stops or multiple journeys

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Other (please specify)

I am not able to physically access these modes of travel due to my personal circumstances

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

Please take time to consider where motorcycles fit in the actual hierarchy of transport in Wellington. They allow a person to reduce their carbon footprint while having the flexibility to move around the city without impeding traffic or taking up (much) valuable parking space. Removing or charging motorcycle parking will not force people into public transport, etc. It will simply penalize people who are doing their best to make the city a better place to live. It's also very strange to try to aim for 85% occupancy of motorcycle parking spaces. I would think 100% should be the goal, as this would indicate the resource is well-allocated relative to demand.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Feel motorbikes and mopeds should have equal rating with push and electric bikes. It's not much difference in space. Motorbikes can travel a further distance and really limit the numbers of vehicles on the main roads coming into the city.

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Agree but please no fleecing us. Sometimes prices just go up because you run the parking service.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

If a second permit is issued for the same household, the second permit is more expensive

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce online application and permitting system

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Provide car share, mobility and micro-mobility on-street parking spaces

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. New dwellings/homes built after 2020

7. Businesses located with the zone

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very unimportant
Support city amenity and safety	Very important
Support access for all	Neutral
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Public transport and safe cycling is most important. Fix it please

Q3. **Is there anything else you would like to tell us about the objectives?**

Public transport and safe cycling is most important. Fix it please

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Public transport and safe cycling is most important. Fix it please. Stop cars ruining the city and being dangerous for everyone

Q6. Is there anything else you would like to tell us about the principles?

Public transport and safe cycling is most important. Fix it please. Stop cars ruining the city and being dangerous for everyone

---

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Just get cars out of the central city altogether stop prioritising them at all, parked or moving.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Just get cars out of the central city altogether stop prioritising them at all, parked or moving. Make some streets exclusively for buses and bikes and e scooters and vespas (mopeds).

Q17. Residents Parking Scheme We are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.**For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Other (please specify)

Q18. Allocation of residents parking permits Please rank the following categories in order of priority with 1 being the highest and 8 being the lowest. **Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. All existing dwellings with 1 or more off-street space

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. Pre-1930s houses or pre-1940s apartments with no off-street parking

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Just get cars out of the central city altogether stop prioritising them at all, parked or moving.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport timetable doesn't suit my schedule

Public transport seems unreliable to me

Public transport route has too many transfers

I don't feel safe using public transport early in the morning/late at night

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Please stop prioritising cars on the city streets. You don't necessarily need to "build" expensive bike infrastructure or bus lanes--- you just have to ban cars from certain streets and there you go, instant bike/bus lane.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Why are bicycle/micromobility parks a low priority in outer residential areas?! People should be encouraged to use bikes and scooters when going to the local shops. Look at Newlands Mall: WCC have installed bike parks on Bracken Road and at the Stewart Drive end but none by New World which is the shop that attracts the biggest numbers. So I have to tie my bike to the trolley bay. Why are EVs given such high priority? They may be seen as more environmentally friendly as standard cars but they don't resolve the congestion problem. By favouring EVs, you are encouraging people to buy a new car. You should encourage people to DITCH their cars.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Leave parking prices as they are and lower the price of public transport instead. A lot of families drive into town because the price of parking is less than the price of the bus. For a Newlands family of 4, the cost of the return bus trip into town is nearly $20 off peak. Parking for our kids' one-hour class in town is $5.50. You do the maths! Children travelling on public transport with a parent should be free. Then we would ditch the car. You can't change the policies on parking alone. You need to address the WHOLE issue: introduce measures to discourage driving into the city while introducing measures to encourage the use of public transport/soft mobility. If you want people to get onboard, you need to give and take.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. EV owners with no off-street parking

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Stop favouring EVs! They do not solve the congestion issue. They are cars end of story. And the Council should not allow new-builds without parking. I don't see why the Council should be responsible for providing parking for private vehicles near their homes? Vehicles are private property that is somehow ok to store on the road while not un use. Why don't you provide on street storage facilities for my camping gear while it is not in use? People are responsible for choosing housing that meets their needs. If they have a car, they should buy/rent a house that has off street parking. Just like if you have a dog, you want a fully fenced section. If there isn't one, you build one. But you would never expect the Council to build a fence for you, would you?!

Q20. What deters you from using public transport? Please select all that apply.

Public transport is too expensive

Public transport seems unreliable to me

Public transport timetable doesn't suit my schedule

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Multiple people come with me on this journey

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

EVs are part of the congestion problem. Stop favouring them. You'll only discourage driving into the city if you encourage using public transport. Encourage use of public transport by lowering the price especially for families travelling together. More bus lanes so buses are faster than other vehicles at peak time. More proper separated cycle infrastructure to encourage cycling and scooters. You will never solve the congestion problem with your current attitude of looking at issues individually one at a time. You need to look at the whole problem and introduce sweeping changes across the board.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

Some of them are not very meaningful in terms of policy solutions.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Bike parking should be a higher priority in the suburbs. There is no need for people to drive everywhere.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Why should we be encouraging people to park in low demand areas? Even people parking on the roadside requires the Council to maintain this area for motorists.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. Businesses located with the zone
3. New dwellings/homes built after 2020

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

People should not get low cost on-street parking simply because their property doesn't have a car park. They should expect to pay market rates. Nor should existing property owners get a lower rate than newcomers. The cost of a residents parking permit should be increased to about $1000 per year, and more for 2nd cars associated with a property.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport timetable doesn't suit my schedule

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

I support linking the cost of residents' parking permits to the cost of using the bus. Currently the cost is very low compared to a monthly bus permit.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

The shift in type of transport used is an important goal to remove cars from the road, however, prioritisation given within the Parking Policy Statement 2020 places Motorcycles on par with private cars. this contradicts the aims of reducing congestion within the Wellington CBD, and the issue of limited parking spaces available. A study in Belgium in 2012, found that a switch of 10% of cars to motorcycles, total time losses for all vehicles decreased by 40 percent and total emissions reduced by 6 percent (1 percent from the different traffic composition of more emission-reduced motorcycles and 5 percent from avoided traffic congestion). A 25 percent modal shift from cars to motorcycles was found to eliminate congestion entirely. Motorcycles also take up considerably less room than that of cars, and significantly less emissions when taking into consideration the impact they have on travel time. WWCs wrongful prioritisation of motorcycles on par with private cars will restrict access to motorcycles within the city and discourage there use, thus hindering your goal to reduce congestion, limit CO2 emissions, and save room with parking spaces.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Increase in availability of free motorcycle parks

Q6. **Is there anything else you would like to tell us about the principles?**

by charging for motorcycle parking, and limiting there availability, you are discouraging a very beneficial form of transport that can not only drastically cut congestion, but has the ability to reduce the amount of room required for parking around the city. one car park space has easily enough room to fit five motorcycles.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. Outer Residential Areas High parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Disagree

Q12. Council Parks, Sports, Recreation & Community Facilities High parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Once again, Motorcycles should receive much higher priority then they are given. with the ability to cut congestion, and condense parking from multiple car park spaces to a couple of motorcycle parks. the lower prioritisation will discourage the use of such a beneficial mode of transport https://newatlas.com/motorcycles-reduce-congestion/21420/

Q15. **Do you agree with this pricing approach?**   No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Do not charge for motorcycle parking. this is discouraging a very beneficial mode of transport for the city, which could help reduce congestion, travel times, number of parking spaces required (more in one space) and most of all, reduced CO2 emissions. consideration should also be given to allow parking on large footpaths, like Australia allows. no parking spaces required at all on the road then.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Second permits
4. Other pre-2020 dwellings with no off-street parking
5. New dwellings/homes built after 2020
6. EV owners with no off-street parking
7. All existing dwellings with 1 or more off-street space
8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

park motorcycles on footpaths as long as not blocking the path.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

No

Q3. **Is there anything else you would like to tell us about the objectives?**

I think that keeping Wellington business wellbeing is the most important as without this we won't have a Wellington

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

How are you going to decide who gets priority? Saying that you don't want people to park but take public transport is not an option when the public transport systems require and all day outing due to terrible service, for a 5 min job.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Why are Urban design features put ahead of car parks? Your lowest priorities have general car parking space, how do you expect people to quickly park to do small jobs and leave.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Have different timed parks on streets. Eg. 20 min parks and 1 and 2 hour parks

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Mobility permit holders

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I find shopping in Wellington for quick jobs hard so go out to the Hutt instead.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

Better public transport for less vehicle use, reduce carbon for environment, safe movement are all important considerations for allocation of car parks in limited spaces. However, suburbs by the central city have both issues of commuters to work using free parking (hospital) and existing residential car owners. In Newtown we struggle with these two issues. I commute with public transport to work and compete to park my car with customers and workers that come to the Newtown community. I support local businesses so people coming to park short term is fair but people occupy these limited areas for going to work is a concern as they should either be parking at work (not in residential side streets) or using public transportation if it is available. E.g. People who work in Newtown park on Rintoul Street for free. I work in city and walk to office or use public transportation but I need to compete to find a space with those people who still use car with my residential permit. I feel like being asked to give up owning a car because the parking on our street is not saved for residents. I appreciate if you consider these perspectives with those objectives. Thank you!

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?** — Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**   Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Other pre-2020 dwellings with no off-street parking
4. Businesses located with the zone
5. All existing dwellings with 1 or more off-street space
6. New dwellings/homes built after 2020
7. EV owners with no off-street parking
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I would like to see more easy access to city by walk, bike, car and public transport. I feel focusing on too much lanes and zones on old narrow roads and streets in Wellington. If we only focus on parking, cycling zone, we might miss the whole point of why we need to change if it gets confused or create another issues. I feel we almost need re-design city and near suburbs for safe and environmentally friendly way. I don't feel safe on bike, walk or bus sometimes now as it is too messy transportation every morning. Importantly we have people on footpath as well. So, I would like to see car park issues are part of the city development but also hope it will be more well designed as a city development in long term. It is safe for people, cyclists, bus and cars. When we know how long it will get to A to B, it will be less stress even though the route is not short cut to their destination. Reliable and stable transportation systems will give us feeling of security in time wise. So, I believe parking issues would be part of the development for reducing amount of cars, developing cities, secure car spaces for some people who need them and secure bike parking space.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

Ensuring that there is adequate parking for cars who are using light rail to get into the city or large shopping precincts. Currently car parking along the J'ville line is severly limited leading to congested side streets, especially in Khandallah where there is a ton of space- eg the huge grass area by Simla Crescent rail station. .

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

I think that motorcycle parking should generally be accorded more spaces in all WCC areas.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Provide car share, mobility and micro-mobility on-street parking spaces

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Disagree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

People with driveways/garages should be strongly encouraged to use them. They should not be high priority when permits are allocated (and if space for 2 vehicles on their property - including garage space) should not be entitled to a permit at all.

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

Please look into removing some parking spaces to make safer cycle ways for all. Cycle ways need to be separate from the road, for safety, and to encourage more people to use them. There should be less incentive for people to store their private property on public roads. This includes privately owned buses and campervans (both of which should incur charges when they are stored on a public street, especially when they are stored there permanently)

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

Freedom to use a car especially in light of the terrible weather in Wellington and the fact many people have physical limitations which don't result in having a mobility sticker

Q3. **Is there anything else you would like to tell us about the objectives?**

Active transport is not something I want enforced on me by the council. Make public transport cheap and reliable and we'd be more likely to use it.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

I don't want you to use parking as a tool to stop me using my car. I work long hours and shift work so I don't have time to muck around with public transport if I want to do any of my "life admin" around my work hours

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

You need to prioritise parking for residents regardless of where they live. Also if there is no parking in the city people will avoid it and you will kill it off. I'm not going to spend huge amount catching an unreliable bus to town when it's cheaper and faster to use my car. I already have changed my habits and stopped shopping in town or during the Sunday markets as don't want to be charged for weekend parking

---

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Mobility permit holders

3. Other pre-2020 dwellings with no off-street parking

4. Businesses located with the zone

5. EV owners with no off-street parking

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

I don't feel safe using public transport early in the morning/late at night

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I am not able to physically access these modes of travel due to my personal circumstances

---

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Car share should always be ahead of private car parks - we need to reduce dependence on private car ownerhsip

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. EV owners with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

There should be a limit of permits to 1 per house/unit. If people want additional cars, then they need to find a private provider of offstreet carparks.

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1.   How important are these objectives to you?

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat unimportant
Support access for all	Neutral
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Neutral

Q2.   Are there any objectives you think we have missed?

Just the fact that businesses pay a bulk of the rates, and that each time, council seems to want to make it tougher for people to go to the city to shop

Q3.   Is there anything else you would like to tell us about the objectives?

Refer above.

**Q4.   To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Very unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very unhelpful

Q5.   Are there any principles you think we have missed?

I like the question above to be better asking not how it achieves your principles, but whether or not the principles are any good. It shouldn't be about upping the fee and reducing the number of spots.

Q6. Is there anything else you would like to tell us about the principles?

As above.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I think that the survey should on opening note all of the options. If it's truly balanced, then I shouldn't have to scroll down to see strongly disagree. I worry again that residents, who live in the area and pay rates, are proposed to be the lowest priority, often when councils sign off on new developments with no car parking required on site. It also seems silly that we subsidise and prioritise businesses like car share parks.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Sure. It's dumb.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Businesses located with the zone

4. All existing dwellings with 1 or more off-street space

5. Other pre-2020 dwellings with no off-street parking

6. Second permits

7. New dwellings/homes built after 2020

8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Sure. Should be more of it for residents and businesses. Perhaps think about innovative ideas like car stacking or removing bike lanes.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

Public transport seems unreliable to me

Public transport route has too many transfers

Using public transport is difficult when travelling with young children/babies

I need my vehicle for work

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

Q22. **Do you have any final comments about the topics raised in this submission?**

Sure. Did I mention get rid of these dumb bike lanes that reduce available parking ?

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

not answered

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Other pre-2020 dwellings with no off-street parking

3. EV owners with no off-street parking

4. Mobility permit holders

5. New dwellings/homes built after 2020

6. All existing dwellings with 1 or more off-street space

7. Second permits

8. Businesses located with the zone

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport seems unreliable to me

I have to make multiple stops or multiple journeys

Using public transport is difficult when travelling with young children/babies

Public transport timetable doesn't suit my schedule

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

not answered

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1.   **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2.   **Are there any objectives you think we have missed?**

not answered

Q3.   **Is there anything else you would like to tell us about the objectives?**

not answered

Q4.   **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Somewhat unhelpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5.   **Are there any principles you think we have missed?**

not answered

Q6.   **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. EV owners with no off-street parking
4. Mobility permit holders
5. All existing dwellings with 1 or more off-street space
6. New dwellings/homes built after 2020
7. Businesses located with the zone
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Using public transport is difficult when travelling with young children/babies

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

* improve travel options for children and youth

Q3. **Is there anything else you would like to tell us about the objectives?**

I want to live in a city where a 10-year old can safely travel unsupervised

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

off street parking should not encroach on cycleways, pedestrian areas etc

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

ev parks don't need such high priority fringe and outer areas should have public transport and micro-mobility as higher priorities

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Mobility permit holders
3. Other pre-2020 dwellings with no off-street parking
4. Businesses located with the zone
5. EV owners with no off-street parking
6. New dwellings/homes built after 2020
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Shared residents bikelockers, using 1 or 2 parking spaces

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Neutral
Support access for all	Very important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Considering a major event in the City and how people will get moved out of it, think earthquake. What people can use to get in to and out of city if public transport becomes a serious health risk, like contracting something like to Corona Virus

Q3. **Is there anything else you would like to tell us about the objectives?**

Think about improving all aspects and not just some. Wellingtons weather is not ideal for cycling and older people do not like it in any case. Consider allowing for more motorcycles if you want less "big" vehicles in town, that way people can still come in from long distances

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

Consult more with businesses around what their needs and that of their clients. Without them surviving due to poor decisions made by the Council is not going to help bring more businesses in to town.

Q6. Is there anything else you would like to tell us about the principles?

I come from a country where this was applied and the city is now empty, all shops went to suburbs where it was easier for their clients to get access to them. All that was left was a few corporate offices that had to have multiple stories and had car parks for their employees, but in the World of today we need less staff in the office so business can operate out of houses in suburbs turned in to offices.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly disagree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Consider easy access for all types of transport to City shops, and if people buy more than they can carry in 2 hands, especially of they have kids

---

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Price so people are motivated to come in to town to spend money, not to keep them out of town and away from businesses that need to survive

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Businesses located with the zone
2. Mobility permit holders
3. New dwellings/homes built after 2020
4. Pre-1930s houses or pre-1940s apartments with no off-street parking
5. Other pre-2020 dwellings with no off-street parking
6. EV owners with no off-street parking
7. Second permits
8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport is too far from where I live or from my destination

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Using public transport is difficult when travelling with young children/babies

I don't feel safe using public transport early in the morning/late at night

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Create more car parks and roads in to town with improving public transport. Take serious consideration to Corona virus and lessons from it where public transport is very good way for it to spread. Consider an earthquake and how people will get out of town if no cars are available to help transport them, we had this already and cars were pulled over at station to help transport people out. First thing that stops is public transport. Peoples lives are more important than removing cars from the city... I hope.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

Objective: make it cheaper for families and other small groups to use public transport.

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

Any changes to parking prices are only to be considered if relevant to improving overall transport objectives, and are totally divorced from any need to increase income for rates alleviation.

Q6. Is there anything else you would like to tell us about the principles?

Consider the increasing population of the elderly and infirm in regard to the need for extra parking spaces.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

EV charging parks should be off all main routes, as they take a long time to be useful; motorcycles deserve more space everywhere; bus stops should be a priority at all on-street locations, especially Council Parks, Sports, Recreation & Community Facilities; outer residential zones are the perfect places for public bus layovers; the city fringe deserves to have taxi stands; urban design features should not consume any parking space anywhere.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Pricing should be exponential for times longer than 1 hour in the central city, eg $n for 1 hour, $3n for two hours, $6n for 3 hours and so on.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. All existing dwellings with 1 or more off-street space

7. Second permits

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Residents' parking zones should not operate at weekends or after 6pm on any day.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

Other (please specify)

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

Providing discounts for EV charging discriminates against low-income people who cannot afford an EV at present. But when prices come down, it will help.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

all of the above objectives should also be calibrated against the diverse needs of the community. I think we should be aware of ageism as well as all the other forms of discrimination that are undesirable.

Q3. **Is there anything else you would like to tell us about the objectives?**

Scooters and bikes on footpaths are dangerous for foot traffic - unless there is a very well developed culture of courtesy as is practised in Japan for example but alas not here. I have been almost bowled over on Lambton Quay by cycles scooters and skate boards.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Pricing of parking currently makes it unaffordable for the average person who is not always young, fit and able to cycle and run or scoot everywhere. Many people need to have appointments with medical practitioners and also have friendly contact with others and also to be involved in the life of the city even when they no longer work in the CBD. E bikes are very heavy and expensive and not easy for a small or older person to lug about. This heavy handed and expensive approach to parking that is currently on offer will drive retail from the CBD - what is a city where only youth, office workers and tourists are able to use it?

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **   Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **   Neutral

---

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **   Neutral

---

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

just don't forget the elderly, the partially sighted, the hearing challenged and the physically challenged (who don't always qualify for a special needs permit) EVERYONE deserves to use our city - the people you think are just old and past it have had a hand building this city into what it is now and still deserve to use its amenities

---

Q15. **Do you agree with this pricing approach?**   No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Please see my previous comments - currently only very wealthy individuals can afford to pay $ 4 .50 per hour -an appointment will take much longer than one hour and time for a coffee break would make it $9.00. Take a walk around Wgtn CBD during the day and observe please how few elders you see walking around. National super is a modest income

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. New dwellings/homes built after 2020
4. Second permits
5. Mobility permit holders
6. Businesses located with the zone
7. All existing dwellings with 1 or more off-street space
8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Please care about the whole community and those who won't have the ability or the time to fill out online questionnaires like this one. Young women combining challenging career and parental duties are often just too tired and stressed to have anything left over at the end of the day to give - that includes filling in surveys such as this one. Older people don't always have the internet or a computer - can't afford it or can't see well enough to do such a survey. Please consider what older or otherwise abled people would like to have - they live here too in early adulthood or middle age its not possible always to imagine what is an impediment for others - please consult with people of all ages and include the wishes of older adults. Your parents and grandparents may be able to share ideas with you.

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

I don't feel safe using public transport early in the morning/late at night

Other (please specify)

Public transport timetable doesn't suit my schedule

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I don't have a bike or want to purchase one

I am not able to physically access these modes of travel due to my personal circumstances

I live too far from where I'm going to walk or cycle

I have to make multiple stops or multiple journeys

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Please be aware that there are always "fashions in thinking" - "woke" meant something else a few years ago... All fashions change - nothing is forever - we must try to get out of being in the present phase if it stops us from thinking very clearly about what are the real facts and issues that affect everyone as opposed to just a significant few who currently fit the fashionable paradigm

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I really hate demand responsive pricing for things in general. People like to know how much something is going to cost before hand. I live in the UK right now and you will never know how much the train from Bristol to London will cost. Sometimes it will be 24 pounds, sometimes it will be 60. It's very frustrating. Just charge a decent price for parking in the city (it's currently quite low imo) and leave it at that.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

On street parking takes up so much space in our city and it would be nice to see it charged for appropriately and gradually removed so we can re-allocate the space for bike lanes and active travel modes.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Safer Parking options for bikes

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Provide car share, mobility and micro-mobility on-street parking spaces

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Other pre-2020 dwellings with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. EV owners with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Second permits
2. EV owners with no off-street parking
3. New dwellings/homes built after 2020
4. All existing dwellings with 1 or more off-street space
5. Businesses located with the zone
6. Other pre-2020 dwellings with no off-street parking
7. Pre-1930s houses or pre-1940s apartments with no off-street parking
8. Mobility permit holders

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

Increasing parking management protocols is the stick - the carrot is safe, reliable public transport and walkable neighbourhoods. For the plans to work, these are both essential, but there's nothing about public transport issues or footpaths and accessibility anywhere in here. Is very disappointing to see these projects operating in silos, and leaves no confidence that any of them will achieve anything.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly disagree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

These questions are very poorly written. We're they tested with anyone who wasn't already immersed in the project? The use of bold text is very confusing - why explicitly make "parking space" normal font and then go back to bold for "priority"? It makes them appear as divided items. The readability is very poor. It should either all be bold it none of it. It's very unclear what they are actually asking and there should be written explicit links to the proposed policy, e.g with page numbers or the diagrams reproduced for easy review. How many council staff car parks are there? Or parks the council rents? Apart from those dedicated to people with mobility support needs, these must all go. If you cannot conduct your business without car parks, then the city is not accessible enough for the proposals you outline here. If you're thinking "oh, no, but we NEED those" you're simply saying you believe your needs and appointments are more important than everyone else's.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Transport costs are a significant barrier for people on low incomes - say someone finally gets a medical specialist appointment, but on arriving in town (where many of these clinics are) find that the parking will cost them $15. It's unmanagable for many people and punitive to penalise them if they fail to pay it because they can't afford it. Is this just someone else's problem? The provisions for mobility access and the processes for accessing these permits don't accommodate most people in this situation.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)
Introduce online application and permitting system

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. Businesses located with the zone

5. Second permits

6. All existing dwellings with 1 or more off-street space

7. EV owners with no off-street parking

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Using public transport is difficult when travelling with young children/babies

I don't feel safe using public transport early in the morning/late at night

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

It's very disappointing to see this programme running independently from the public transport improvement measures and neighbourhood accessibility issues. I contacted the council asking when footpaths would be installed given the surrounding landscape is being covered in houses - no one ever even answered!! It's not safe or accessible to walk to a bus without a footpath.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This is unfair on those who can not pick.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too far from where I live or from my destination

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

When the weather is bad, I choose to use my private vehicle

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

---

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Neutral
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

To reduce congestion

Q3. **Is there anything else you would like to tell us about the objectives?**

I think that, given the increase in population, we need to develop the roading infrastructure. The congestion around the Basin Reserve is because there is only one tunnel - the roading is basically unchanged since the mid-20th Century

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

The Council should increase the supply of Council-controlled parking - the demand for parking is going to increase, not decrease irrespective of what other measures are taken.

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Some people can't use public transport and are reliant upon cars and taxis - there needs to be more provision for commuter parking on the fringe of the CBD particularly if parts of the CBD are not going to be accessible for cars

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Businesses located with the zone

2. Other pre-2020 dwellings with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Mobility permit holders

5. All existing dwellings with 1 or more off-street space

6. New dwellings/homes built after 2020

7. Second permits

8. EV owners with no off-street parking

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule

Public transport seems unreliable to me

Using public transport is difficult when travelling with young children/babies

I have to make multiple stops or multiple journeys

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Multiple people come with me on this journey

I don't have a bike or want to purchase one

I live too far from where I'm going to walk or cycle

Q22. Do you have any final comments about the topics raised in this submission?

not answered

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Using public transport is difficult when travelling with young children/babies

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Can the space outside Wellington library (Victoria st) be used for motorcycle parking? All bike spaces are full by 9am weekdays and I have to park opposite Te Papa and walk in. Demand is there and space unused.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Neutral
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat unimportant
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very unhelpful
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very unhelpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat unhelpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Weekend parking needs to be free again (or at the very least on Sunday) to encourage people back into the central city - I shop elsewhere now at the weekends to avoid parking charges where previously I would have come in to sop, have brunch etc at least once every two weeks.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Mobility permit holders

3. Other pre-2020 dwellings with no off-street parking

4. Businesses located with the zone

5. EV owners with no off-street parking

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

Don't try to force people out of cars by reducing parking, making it more expensive etc. Wellington is not yet set up to exclude vehicles and its public transport system is still to unreliable.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I disagree with these for the following reasons: Bicycle/micro-mobility parking should always be in the highest priority as this is one of the things that will encourage more people to cycle. Not everyone has the ability to take their bike off the street into their house or property - some residential areas may have no space for somewhere secure to lock their bike out of sight of the street, and many people live up or down many steps and have no easy place that's under cover to securely lock a bike in residential neighbourhoods. This can be a barrier in itself to making the switch to biking. Bikes left out locked to fences just rust and are at risk of being stolen. And many people are buying ebikes which are heavy and come with their own storage challenges - they cost more to buy so people may have more invested in the value of the bike, and hence want to protect it from theft and damage. Car share and EV charging parks should go together - if we want more electric car share, then there needs to be charging stations near/alongside the car parks. Urban design features should always be a consideration as cities should be places for people and improving the urban environment shouldn't be an add-on, it should be intrinsic to street design. Urban design is particularly important for off-street parking facilities - most off-street parking areas/buildings in Wellington are ugly concrete wastelands and not places where you want to spend any time at all. Many of these facilities/areas in Wellington are in prime locations (eg for sun, shelter, views) and taking valuable space that should be used for more parks and green areas or even just outdoor space where cafes can have tables outside)

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. Businesses located with the zone

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1.   **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2.   **Are there any objectives you think we have missed?**

not answered

Q3.   **Is there anything else you would like to tell us about the objectives?**

not answered

Q4.   **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5.   **Are there any principles you think we have missed?**

not answered

Q6.   **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

While I agree with most of the hierarchies it seems like urban design features are given too much priority. Maybe the survey needs to define the term "urban design features" or use a different name as it's hard to relate to what these design features are.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Is this something that will work like Uber's surge pricing? It sounds like a great idea as it should hopefully encourage people to change their habits if they can around when and how they are travelling to high priority parking areas

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce online application and permitting system

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. New dwellings/homes built after 2020

5. Second permits

6. All existing dwellings with 1 or more off-street space

7. EV owners with no off-street parking

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

In a flatting situation have two or more cars is quite common so I think penalising someone with a higher fee or not giving them a permit is fair or a solution to fixing the cities parking. One problem is that rental companies charge far too much for a car park to be included when renting an apartment with an off-street car park which then leads to more people applying for parking permits or exemptions.

Q20. **What deters you from using public transport? Please select all that apply.**

When the weather is bad, I choose to use my private vehicle

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Neutral
Support business wellbeing	Somewhat important
Support city amenity and safety	Neutral
Support access for all	Neutral
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

You will have more EV parking spaces than actual EV's, this can be adopted over time if/when more people use EV's

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. New dwellings/homes built after 2020
4. Pre-1930s houses or pre-1940s apartments with no off-street parking
5. Second permits
6. Other pre-2020 dwellings with no off-street parking
7. All existing dwellings with 1 or more off-street space
8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat unhelpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Making public transport for families affordable

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

You are making it expensive for low income families.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking
Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)
Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. All existing dwellings with 1 or more off-street space
2. Other pre-2020 dwellings with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Mobility permit holders
5. Second permits
6. New dwellings/homes built after 2020
7. EV owners with no off-street parking
8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Support range of transport choices available to all (which is important for all users, but also touches on the important concept of "aging in place" when mobility capabilities shift/diminish).

Q3. **Is there anything else you would like to tell us about the objectives?**

Generally it looks like you're proposing worthwhile, important objectives!

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

What about principles that touch on provision of parking for bicycles and scooters? Parking should be considered more widely - we need to accommodate cars, but we also need to accommodate parking for other personal mobility modes (including e-charging stations, etc.)

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Given how little space they take up, I wonder why bicycles/micro-mobility parks aren't a priority in every location (including key transport routes and suburban areas)?

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I've heard it has worked elsewhere. Will be interested to see if/how it works in Wellington.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

See previous comment.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

If we are restricting car parking, it obviously can't be done in isolation from better access to, design for and infrastructure supporting other mobility modes (including MRT, active/micro-mobility, better pedestrian priority, etc.). This policy has a lot of good stuff in it, but that stuff needs to ensure it is cross-pollinated with other Council priorities atm (e.g., PfG, LGWM, etc.).

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Mobility permit holders

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Using public transport is difficult when travelling with young children/babies

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Neutral
Support access for all	Somewhat unimportant
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **   Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I think these questions are meaningless. Commuters are a key revenue earner in wellington and allows the city to function. Mobility parks etc are important but only to a level they are used (i.e. lots of spaces that are usually empty shows there are too many)

Q15. **Do you agree with this pricing approach?**   No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This question is very confusing. Will prices change at various different times (like Uber) where you never know what it will cost to park? Pricing has to be far clearer in advance.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Other pre-2020 dwellings with no off-street parking

5. Second permits

6. All existing dwellings with 1 or more off-street space

7. Pre-1930s houses or pre-1940s apartments with no off-street parking

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport seems unreliable to me

Other (please specify)

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

This is pointless and will enable the council to do whatever and say they have consulted the public. The priority should be to bring people into the city to use the shops and businesses. This would best be achieved by bringing back free weekend parking

---

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. New dwellings/homes built after 2020
4. Other pre-2020 dwellings with no off-street parking
5. Pre-1930s houses or pre-1940s apartments with no off-street parking
6. All existing dwellings with 1 or more off-street space
7. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

The financial amount private vehicle users pay should truly reflect the cost on the environment and lost efficiencies of the transport network.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

If we want to remove the city's reliance on cars then there should be an overall objective about reducing parking supply.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

All is good except for the over weighting towards EV parks. Remember EV are are still cars (the thing we are trying to reduce reliance on). They should not be given priority above car share parks (particularly at Council Parks, Sports, Recreation & Community Facilities).

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Parking in town is still 'parking in town'. There should be no discount rates. I think a better approach is to have a geographical zonal based strategy where the cost of parking is highest in the central city and centre zones, then pricing gradually gets cheaper as you move further away from high demand areas. The same technology should be used as a 'demand pricing approach' in that the council should be able to change the cost of parking in any zones whenever they please in realtime.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Mobility permit holders
3. EV owners with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. New dwellings/homes built after 2020
6. All existing dwellings with 1 or more off-street space
7. Businesses located with the zone
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport timetable doesn't suit my schedule

Public transport seems unreliable to me

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I don't have a bike or want to purchase one

Multiple people come with me on this journey

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I was very surprised not to see the district plan rules around Minimum Parking Requirements discussed in this policy. Urban design and transport planning best practice (including the Govt Productivity Commission) has recommended that authorities remove minimum parking requirements entirely from District Plans partly due to their behavioural influence of promoting car dependence in cities. Essentially the minimum parking requirements drive up the cost of development, increase the convenience of a 'door to door' driving lifestyle, and forces people to buy an off street carpark as part of their house which results in a "well if I've got a parking space, I better use it" mentality.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **   Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**   Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Quite amazed at the amount of residents' parking available in Wellington. Not sure it should be quite so plentiful!

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

In principle, but depends on how it is applied and the impact. Wouldn't like to see cars driving round and round because there are no parks at all

---

Q17. **Residents Parking Scheme We are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Provide car share, mobility and micro-mobility on-street parking spaces

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permits Please rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. EV owners with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

No 2nd permits at all and no permits where there is at least 1 off-street park

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

parking should be affordable (and often, free) to encourage people to come into the city

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. All existing dwellings with 1 or more off-street space

7. Second permits

8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support access for all	Neutral
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

The objectives are very high level so hard to know what's missing. Are you considering street parking in suburbs, reducing size of vehicles, limiting number if cars per household?

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

How would you consider a house with 5 flat mates with 5 cars therefore 5 parks versus a family with one car who struggles to find a park?

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Still unsure how residential parking in close to city centre is being prioritised.

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

I think this would exclude low socioeconomic households.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. Mobility permit holders
4. EV owners with no off-street parking
5. Second permits
6. Businesses located with the zone
7. All existing dwellings with 1 or more off-street space
8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Keen for it be extended to Wadestown. It would be good to understand what vehicles can be parked. We have caravans, large camper vans and mobile businesses parking on our street. And then there's a large number of cats associated with houses with multiple flat mates.

Q20. **What deters you from using public transport? Please select all that apply.**

Using public transport is difficult when travelling with young children/babies

I have to make multiple stops or multiple journeys

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

We find that it can be stressful worrying about whether we will have a park close to our home. We have a young child. Previously on putting in a submission for a planned parking deck that is being built to accommodate 2 new houses - we got back a comment that there is plenty of parking on the street. There isn't. This car deck will impact the street significantly and reduce parks. The houses that are being built are not directly on the street, I'm not sure people think about the whole picture when approving consents.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Accessibility for those for whom public transport is not a viable option. Reasonable access to vehicle parks proximate to cbd.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat unhelpful
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly disagree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

**Q11. Strongly Disagree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Other pre-2020 dwellings with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. EV owners with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Other (please specify)

I don't feel safe using public transport early in the morning/late at night

I have to make multiple stops or multiple journeys

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

Provide safe separate efficient pedestrian, public transport and private through or round CBD transport systems

Q3. Is there anything else you would like to tell us about the objectives?

There needs to be a combined movement balance to allow practical, efficient, self funding, safe (including public health) transport public network and the practical ability for private transport to reach destinations in reasonable time. Using public transport from northern or western to eastern and suburbs carrying passengers to travelling to several destinations to sport, shopping or airport activities is in reality generally total unpractical, expensive and massively time consuming. People benefit from both systems. Public transport primarily suits single shorter distances and private vehicles suit longer, multiple passengers, destinations and erratic or immediate times.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

Install sign notified cameras on Clearways to allow immediate ticket and towing.

Q6. **Is there anything else you would like to tell us about the principles?**

There are insufficient Parking resources to manage Clearways. Many vehicles park and obstruct safe transport including cyclist during clearway times slowing public and private transport and forcing cyclists from dedicated lanes for their protection. Without robust clearway enforcement bus transport is severely hindered.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

The proposed parking space hierachies are biased, skewed and unbalanced.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Time needs to be factored with high demand. Some areas should have lower parking charges during quieter weekend mornings to encourage early social, sporting and health activities. It would increase during the day to suit demand.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. New dwellings/homes built after 2020

5. Businesses located with the zone

6. Second permits

7. EV owners with no off-street parking

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

EV vehicles should park on site or off-street only to provide safe charging without creating pedestrian Health & Safety cable trip hazards. Vehicle motive power has no parking priority. Encourage more on site parking by design to free up roads.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

I don't feel safe using public transport early in the morning/late at night

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I don't have a bike or want to purchase one

Multiple people come with me on this journey

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

If revenue based parking is removed for other purposes the lost income should be evenly collected for the benefit of the city by ratepayers. Rather than increasing parking fees on reduced parks.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Very unimportant
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Somewhat unimportant
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. All existing dwellings with 1 or more off-street space

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Mobility permit holders

7. Businesses located with the zone

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very unimportant
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

Eliminate congestion

Q3. Is there anything else you would like to tell us about the objectives?

shifting the 'type of transport used' might be a means to an end, but it should not be an objective of itself.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Very unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. Are there any principles you think we have missed?

Your policy is based on managing demand. There should be a policy to increase supply of parking.

Q6. Is there anything else you would like to tell us about the principles?

Your policy is based on managing demand. There should be a policy to increase supply of parking.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **   Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**   Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

The hierarchies will be OK only if the supply is sufficient to service the needs at the lowest priority.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This is not a substitute for an adequate supply of parking.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. All existing dwellings with 1 or more off-street space
4. Businesses located with the zone
5. Other pre-2020 dwellings with no off-street parking
6. New dwellings/homes built after 2020
7. EV owners with no off-street parking
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Yes we need better public transport, and yes we need to make walking and cycling attractive options, and yes we should encourage a shift to cars with less emissions, BUT WE STILL NEED MORE CAR PARKS!

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Comfortable, well designed urban centres, to encourage people to linger.

Q3. **Is there anything else you would like to tell us about the objectives?**

Jan Ghel said to double the people in a space, get twice as many people there or get the same number to stay twice as long. Make urban centres more pedestrian friendly (trees, wide footpaths, street furniture etc.) to make urban centres more friendly to people.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

The impact of private parking provision. Can a levy be placed on these? Say $5/day that can be used to reduce public transport costs?

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. New dwellings/homes built after 2020

5. Other pre-2020 dwellings with no off-street parking

6. Businesses located with the zone

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

its important to have objectives i can tell you something.

Q3. **Is there anything else you would like to tell us about the objectives?**

Yes, I will like to tell you about the objectives, please let me visit to see you for an appointment with you please in April 2020.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

oh well i will like to say something about the problem is the issues.

Q6. Is there anything else you would like to tell us about the principles?

Yes, i will like to tell you about the principles and will need to see you when you have an appointment with you please. thanks

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Neutral

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

its very big high priority for everyone and what important to the people want

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

slow prices and expensive about the prices cost

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Other (please specify)

Provide car share, mobility and micro-mobility on-street parking spaces

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

None of the above

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

talk to the residents parking scheme and what they want to say....

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Other (please specify)

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

None of these, I use public transport regularly

I don't feel safe using public transport early in the morning/late at night

I need my vehicle for work

Using public transport is difficult when travelling with young children/babies

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

I don't have a bike or want to purchase one

None of these, I walk/bike/scooter regularly

I have to make multiple stops or multiple journeys

Other (please specify)

I live too far from where I'm going to walk or cycle

I am not able to physically access these modes of travel due to my personal circumstances

---

Q22. **Do you have any final comments about the topics raised in this submission?**

yes i will love to know the topics are more important and email me to see you and need to talk with you in our appointment. thanks

---

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Neutral
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

it probably wouldn't be a popular change, but reducing availability of suburban on-street parking would encourage people to own (and use) fewer cars. If it were up to me I'd go "if you don't have, or can't buy off street parking at home - then you can't have that (often extra) car"

Q3. **Is there anything else you would like to tell us about the objectives?**

I'm concerned about this survey - I think intuitively people expect "important/good/best" to be at the right-hand side of the table. I initially filled this in with the opposite choices (eg. selected "very unimportant" where I'd intended "very important"), and had to come back and change when I realised how this is formatted.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

this may be better suited to another page, none the less:- Parking fines are too low. I know many people who's attitude to parking time limits is "doesn't matter if I over-stay. It's only a $12 fine *IF* I get caught".

Q6. Is there anything else you would like to tell us about the principles?

some of these are very ambiguous questions - like really, what does "align council operations with the parking policy" mean to the average wellingtonian??

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

I don't think motorcycles should have priority any different to cars, for one thing

---

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking
3. Businesses located with the zone
4. All existing dwellings with 1 or more off-street space
5. New dwellings/homes built after 2020
6. Other pre-2020 dwellings with no off-street parking
7. Pre-1930s houses or pre-1940s apartments with no off-street parking
8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

I don't really believe the ranking I've given above, but I have to complete it. I think suburban on-street parking should heavily discouraged, especially on wellingtons narrow windy streets like totara rd/nevay rd in miramar. Households with 2 or more cars should be particularly discouraged. Better enforcement is needed too - I see cars half-on footpaths all the time. No one fears doing that, because they no there's no repercussion.

Q20. What deters you from using public transport? Please select all that apply.

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

left off the "discouraging factors for public transport use" was the monumental screw-up in 2018 redesigning the bus network. Spending a fortune to take a system that was adequate and turn it into one that is far from adequate. I used to take the bus daily, that stopped me using the bus at all. And left off the "active transport" is safety - wellingtons roads have many, many places it is not safe for pedestrians / cyclists / microcommuters, and there are a lot of drivers out there who ignore the safety of those groups.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Cost, hours of travel on public transport would greatly affect the demand for parking.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

The one problem i see with this is that for example free parking along the waterfront might disappear and the less wealthy will be disadvantaged and less likely to come to certain areas because of cost.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Businesses located with the zone

4. Second permits

5. All existing dwellings with 1 or more off-street space

6. Other pre-2020 dwellings with no off-street parking

7. New dwellings/homes built after 2020

8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I think the hours when the permit applies should be longer and they should be checked more in the late afternoon evening.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

---

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Efficient and affordable public transport Proximity of public transport to amenities

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street Parking**High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Fantastic!

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. All existing dwellings with 1 or more off-street space

2. Mobility permit holders

3. New dwellings/homes built after 2020

4. EV owners with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. Pre-1930s houses or pre-1940s apartments with no off-street parking

7. Businesses located with the zone

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Not every dwelling necessarily needs an allocated on street or off street park (can be dependent on the occupant or for new devlopments- dependent on the developers intention for the dwelling or use types). If public transport proximity and affordability deliver easy alternative transport modes we shouldn't encourage more car parking even in residential zones.

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

So happy to hear this is finally being tackled by Council! To endorse such change task a bold step and will eventually lead our city to better outcomes for all as the city grows and develops. Accessibility, affordability and proximity are critical.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Very unimportant
Support business wellbeing	Neutral
Support city amenity and safety	Very unimportant
Support access for all	Neutral
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

Support reduction in private vehicle use. Support most space, emissions efficient movement of goods and people.

Q3. **Is there anything else you would like to tell us about the objectives?**

The council should be transparent and direct about the goal to reduce private vehicle use.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very unhelpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very unhelpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Have a cap/sinking lid on the number of parking spaces.

Q6. Is there anything else you would like to tell us about the principles?

I disagree that changes should be linked to improvements in the transport system. Removal of parking spaces is an improvement in itself and shouldn't be reliant on other changes to be implemented. Access should not prioritise people who cannot use active or public transport. Those people should be considered but prioritising a small minority will prevent the council from delivering on a high quality active and public transport system. Providing information about parking space availability is about facilitating people to drive their private vehicle and park. We should not be investing is supporting behaviour we are trying to reduce. The assumption should be that people are not going to drive, so we don't need to tell them if car parks are available.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?   Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

There should still be a base price for low demand, that doesn't go too low.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I don't agree that houses without off street parking should be prioritised. There shouldn't be an assumption that the people that live in a neighbourhood have more right to the public space on the street outside their house. I disagree with residents parking schemes.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Wellington City Council needs to do more to get cars out of the central city. Vehicle parking should be removed so that drivers do not try to drive and park right outside shops. Other cities in New Zealand and overseas learnt this a long time ago and Wellington needs to get with the times and catch up.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

not answered

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

not answered

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I think across the board you need to reconsider where residents are in the priority - if they don't have places to park, they will use parks in other areas and use public transport - sucking twice the resources.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I think that's relative - I would support increasing parking rates for visitors and commuters but not for residents. Residents have no choice about where to put there car - but commuters and visitors could choose alternatives to driving.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. New dwellings/homes built after 2020

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. EV owners with no off-street parking

6. Businesses located with the zone

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

If you give priority to EV owners you give priority to people with significantly higher economic status. And why should the age of the dwelling affect your priority - if you are a renter you have no control over whether you have off street parking.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

More parking space for people popping in and out of the city for less than an hour

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Other pre-2020 dwellings with no off-street parking
4. Businesses located with the zone
5. All existing dwellings with 1 or more off-street space
6. EV owners with no off-street parking
7. New dwellings/homes built after 2020
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. Council's Central City Off-Street Parking **High** **parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.** **Medium** **parking space priority: car share parks, EV charging parks, then commuter parks.** **Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.** **To what degree do you think we have this correct for Council's central city off-street parking?**

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Suggest that Auckland's model be used - longer than 2 hours, the price doubles (maybe 1 hour for Wellington?). This encourages parks to flow

---

Q17. **Residents Parking Scheme** **We are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.** **For more in depth information regarding** **the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?** **Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Q18. **Allocation of residents parking permits** **Please rank the following categories in order of priority with 1 being the highest and 8 being the lowest.** **Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Other pre-2020 dwellings with no off-street parking

3. Mobility permit holders

4. EV owners with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. Second permits

7. New dwellings/homes built after 2020

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Sensible cost increases which actually reflect the cost of running the scheme

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking
If a second permit is issued for the same household, the second permit is more expensive
Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. EV owners with no off-street parking
4. Mobility permit holders
5. Businesses located with the zone
6. New dwellings/homes built after 2020
7. Second permits
8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

No

Q3. **Is there anything else you would like to tell us about the objectives?**

No, seem broad enough.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Under central city, I would like to see Motorcycle spaces prioritised as high. As motorcycles emit approximately half the co2 of passenger cars, and occupy approximately 1/6th the space it seems like they should be encouraged to reduce emissions, congestion, and free up parking spaces.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

It appears to recommend placing charges on motorcycle parking, which would deter people from using this transport method, into passenger cars, which take up more space, emit more co2, and create more congestion on our roads.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

None of the above

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

No

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

My main objection is to implementing fees on motorcycle parks and reducing their availability. This is on the grounds that it will force people who aren't able to practically catch public transport due to family or location situations, into passenger cars. Motorcycles emit ~half the co2 of a passenger vehicle and take up ~1 8th the space. Encouraging their use free's up the air, the traffic and the parking spaces available when they arrive. Thank you.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Neutral
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

The council seems to be hell bent on persecuting drivers, is it your aim to get us all using a horse and cart? There are other issues that need to be addressed, like the sewage that is being pumped into the harbour. Sort that out, make sure you are spending our money wisely, not on crackpot ideas. You should also ensure that the council runs very efficiently from a resource and cost perspective.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat unhelpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

That drivers of vehicles are not evil and should not be persecuted for driving a vehicle. If the public transport system actually worked and was reliable then maybe people wouldn't choose to drive some of the time

Q6. **Is there anything else you would like to tell us about the principles?**

The principles all seem biased towards your own not so hidden agenda that you'd be quite happy to ban pretty much all vehicles from everywhere in the city, whether that be by providing no parking, speed restrictions, or charging extortionate rates to use the ever reducing parking facilities.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

None of the above says what the mix of the choices are, other than you consistently see light passenger vehicles as the lowest priority, even in residential areas. You are going to drive people away from the city with this biased approach, I suspect retailers and the hospitality sectors have already experienced a reduction in profits from the point you removed the free 2-hours parking at weekends.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

It seems that you are intent on fleecing as much money out of people as possible

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Introduce online application and permitting system

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. Second permits
4. Other pre-2020 dwellings with no off-street parking
5. All existing dwellings with 1 or more off-street space
6. Pre-1930s houses or pre-1940s apartments with no off-street parking
7. EV owners with no off-street parking
8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive
Public transport is too far from where I live or from my destination
Public transport seems unreliable to me
Public transport route has too many transfers
Using public transport is difficult when travelling with young children/babies
When the weather is bad, I choose to use my private vehicle

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle
I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

This sounds like a good idea

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. All existing dwellings with 1 or more off-street space
3. EV owners with no off-street parking
4. Pre-1930s houses or pre-1940s apartments with no off-street parking
5. Businesses located with the zone
6. Other pre-2020 dwellings with no off-street parking
7. New dwellings/homes built after 2020
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Permits should be limited to one per household. Also, residents should be forced to park in their own residential area (eg a lot of Mount Victoria residents are currently parking in Roseneath taking up residents' spaces here)

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Ensure fair use of available parking

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

It is not clear what the definition of central city and city fringe is. Is central city the cbd?

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. Mobility permit holders
4. EV owners with no off-street parking
5. Second permits
6. All existing dwellings with 1 or more off-street space
7. Businesses located with the zone
8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

The garage ratio idea actually reduces availability as people use their garage for non-parking

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

I believe the objectives can clearly outline the health benefits of creating a more people friendly city. Cities across Europe have been building infrastructure to support the hierarchy of people before cars and have a number of case studies providing evidence of the positive impact on peoples health/happiness. Wellington is in a perfect position to model itself off cities like Utrecht/ Groningen in Holland or bigger cities like Paris who are making bold moves to pedestrianise parts of the Seine.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Please consider more protected areas for bicycle parking and potentially increasing the priority of motorcycle parking to alleviate traffic congestion.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Introduce discounted exemption permits for mobility permit holders and EV car-owners

If a second permit is issued for the same household, the second permit is more expensive

Introduce online application and permitting system

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Q18.	**Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**	1. Mobility permit holders
		2. Pre-1930s houses or pre-1940s apartments with no off-street parking
		3. Other pre-2020 dwellings with no off-street parking
		4. EV owners with no off-street parking
		5. All existing dwellings with 1 or more off-street space
		6. Businesses located with the zone
		7. New dwellings/homes built after 2020
		8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20.	**What deters you from using public transport? Please select all that apply.**	Public transport is too expensive
		Public transport seems unreliable to me

Q21.	**What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**	None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I think this will only be accepted by the public if you find an efficient way to inform people about this before parking, walking to the meter, and getting a bad surprise. I don't really use my phone to navigate in the car, although a good app for "find a cheap car park for 2h" would be an incentive for that. Please don't try to do this app yourself, integrate with the big players if possible. Usability is key with these things, particular in a car context.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. EV owners with no off-street parking

3. Mobility permit holders

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. All existing dwellings with 1 or more off-street space

7. Second permits

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

On the format: I enjoyed the video, clear comms while keeping it simple. The FAQs were great as well, looks like you actually tried to find out the "frequently" part :) I've read about half of the "Parking Policy 2020 Statement of Proposal" doc, but I usually do most of my reading on the phone. Landscape PDFs are the worst for that.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Neutral
Support business wellbeing	Very important
Support city amenity and safety	Somewhat unimportant
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

Equality for all users

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Very unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Motor cycles have less imact than most other vehicles but are not given parking priority. Many new bikes will be EVs too. Very short sighted policy making considerations.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Very devicive and targets commuters unfairly

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. New dwellings/homes built after 2020
4. Businesses located with the zone
5. All existing dwellings with 1 or more off-street space
6. Mobility permit holders
7. EV owners with no off-street parking
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

Think multi-level innovative solutions that don't penalise commuters who are essentially the life blood of a city. Stop over charging for parking as a secondary council income. Be more motorbike friendly to reduce the number of cars used for commuting.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

1. Provide an efficient parking service to residents and visitors (I am staggered that this is not the first objective on your list)

2. Retain Wellington's character as a small city that is easy to get around by car, both for driving into the CBD for short visits, and driving through the central city to get to destinations across town (the topography does not allow for a ring road to avoid the CBD)

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Short stay parks appear to be generally prioritised a bit low eg they should be top equal priority for suburban centres

---

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Demand-responsive parking and exponential parking charges is as silly as it sounds. It reeks of using complexity and terminology to get away with overcharging where possible. The council should use a simpler system that the public can trust and this could just be a slightly more tiered system than the current one

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

I need my vehicle for work

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

I have to make multiple stops or multiple journeys

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Neutral
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat unimportant
Support access for all	Neutral
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very unhelpful

Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Why on earth are you wasting time and money on "urban design features"?

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Until you fix the appalling bus situation, raising prices on parking is pure money-grabbing

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Other pre-2020 dwellings with no off-street parking

3. Mobility permit holders

4. EV owners with no off-street parking

5. Businesses located with the zone

6. All existing dwellings with 1 or more off-street space

7. Second permits

8. New dwellings/homes built after 2020

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Using public transport is difficult when travelling with young children/babies

I don't feel safe using public transport early in the morning/late at night

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I am not able to physically access these modes of travel due to my personal circumstances

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

not answered

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

No

Q3. **Is there anything else you would like to tell us about the objectives?**

No

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Ensuring parking contributes to the local economy

Q6. **Is there anything else you would like to tell us about the principles?**

no

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Short stay car parks should take priority everywhere.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. All existing dwellings with 1 or more off-street space
4. Pre-1930s houses or pre-1940s apartments with no off-street parking
5. New dwellings/homes built after 2020
6. Other pre-2020 dwellings with no off-street parking
7. EV owners with no off-street parking
8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport is too far from where I live or from my destination

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

I need my vehicle for work

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I live too far from where I'm going to walk or cycle

Q22. Do you have any final comments about the topics raised in this submission?

A lot of people are put off going into the city on weekends due to pay parking. This needs to be scrapped to revive the CBD and to provide support to business located within the CBD

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. How important are these objectives to you?

Support shift in type of transport used	Neutral
Support safe movement	Neutral
Support business wellbeing	Neutral
Support city amenity and safety	Neutral
Support access for all	Neutral
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. Are there any objectives you think we have missed?

Allow every resident to have convenient parking at their place of residence

Q3. Is there anything else you would like to tell us about the objectives?

I do not understand how they relate to parking - all sound very loose

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. Are there any principles you think we have missed?

Let residents have parks rather than commuters taking them. Limit number of resident parking permits per house - some houses have 2 while flats often have many more. Do not issue coupon permits in already densely parked areas as it penalizes residents greatly.

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Residents who pay a fee for annual parking coupon need to be considered over commuters who regularly do not pay and are not monitored by parking wardens. Residents pay but get no benefits while other non-payers are often not penalized. No fairness at all. Resident parks should be outside houses not further away from homes, up the road - commuters seem to get more convenient parks while residents have to walk distances with groceries etc - again not fair.

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Residents should have a flat rate, especially if you are also a ratepayer. Commuters should be charged more.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Other pre-2020 dwellings with no off-street parking

3. Second permits

4. All existing dwellings with 1 or more off-street space

5. New dwellings/homes built after 2020

6. Mobility permit holders

7. EV owners with no off-street parking

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Monitor it and issue tickets - no point in having rules if they are not adhered to - those that abide by them I.e. residents are continually penalized.

Q20. **What deters you from using public transport? Please select all that apply.**

I need my vehicle for work

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

No

Q3. **Is there anything else you would like to tell us about the objectives?**

No

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Other pre-2020 dwellings with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. EV owners with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. Businesses located with the zone

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

For option 2 "Provide car share, mobility and micro-mobility on-street parking spaces" I do not agree with car share.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Are you guys seriously asking questions like this. I work in government and this is just weird asking the general public about how your principles link to your objectives.

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

They seem strange. I'm a motorcyclist and don't understand why you haven't prioritised this in the cbd areas but it's prioritised at council parks for example. As fuel costs go up people are turning to bikes and there aren't enough spaces for commuters. You need to encourage motorcyclist and scooter riders in the city not punish them which seems to be the strategy of your parking wardens at the moment

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

but it shouldn't be all the time. There are on peak and off peak considerations as well. It's not just about location. By the way I work in the electricity sector and while these ideas sound awesome when you talk about them like this, they become complicated by smart people. My advice. Keep it simple.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. EV owners with no off-street parking

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

---

Q22. **Do you have any final comments about the topics raised in this submission?**

I reiterate my call for more motorcycle and scooter parks in the city. If you are trying to reduce cars on the roads then try and promote this.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Neutral
Support city amenity and safety	Neutral
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce online application and permitting system

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders

2. EV owners with no off-street parking

3. Second permits

4. Businesses located with the zone

5. Pre-1930s houses or pre-1940s apartments with no off-street parking

6. Other pre-2020 dwellings with no off-street parking

7. All existing dwellings with 1 or more off-street space

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Wellbeing of people? I realise this is covered in some of the other objectives but the way they're currently expressed business wellbeing appears to be elevated. Mitigating the effects of climate change should be the highest objective.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Bicycle parking should be provided where needed. More bike parks needed in the city esp with high uptake of bikes. Need more facilities like grey street bike parking.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Minimising travel delays

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I am suspicious about urban design features as these are sometimes not well thought through. A good example is the huge amount of space that was cut off in front of the City of Wellington Pipe Band hall - for the occasional walker who could quite easily walk between parked cars previously. The council officials allowed very short consultation times and then took little notice of hall user concerns and seemed intent on pursuing their own agenda.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

In light of the Covid 19 crisis I think inner city price should be reviewed and changed regularly so the car parks are well utilised, as shoppers and workers diminish. It is more important to allow some people to drive to work then force them into close quarters on public transport!

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. EV owners with no off-street parking

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I don't have a bike or want to purchase one

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Neutral
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

Support convenience for those working and shopping in the CBD

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Ensure that future plans take into account the weather. Ensure futur eplans take into the time and conveniece of commuting and shopping

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This approach penalises those on lower incomes - who are often those living futher from the city and more relait of prviate transport

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

None of these, I use public transport regularly

When the weather is bad, I choose to use my private vehicle

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Neutral
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Two points, Affordability is key - right now it has become a revenue generation mechanism for WCC than meaningfully address people's needs. Electric vehicle parking - the city council is sending muddled signals on this. What exactly is your ojective in enabling and encouraging EV?

Q3. **Is there anything else you would like to tell us about the objectives?**

I suggest providing contextual help to show what you mean by these objectives. For example - support shift in type of transport is too ladge and vague to indicate anything.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very unhelpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Differential pricing based on vehicle emissions. Use parking as a signal to encourage electric vehicle adoption - dedicated ev spaces, free charging while parking etc.

Q6. **Is there anything else you would like to tell us about the principles?**

Heaps. It is not at all clear with the above principles what the city council objectives are. Principles need to direct the design, behaviour and development of our city. these principles are are not clear enough to guide the future state of our city. Disappointed with this lack of quality in thinking.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Off street parking is a wild west zone. It needs better thinking and planning. There are blind spots in Karori, Northland where people park the cars. Accidents are imminent. Please have more thought on this. Further with the rise of autonomous vehicles ensure clear marking for OSP. Else it will cause vehicles to err and cause accidents.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Disagree and disappointed. This is a very lazy approach to pricing, there are so many variables that need to be considered and contingent on several other factors. If people cannot carry pets in public transport and need to travel to city - they have no choice but to take the car.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking
2. Mobility permit holders
3. New dwellings/homes built after 2020
4. Second permits
5. Businesses located with the zone
6. All existing dwellings with 1 or more off-street space
7. Other pre-2020 dwellings with no off-street parking
8. Pre-1930s houses or pre-1940s apartments with no off-street parking

---

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

This is a stale approach to defining parking. What case studies of other cities have you looked at? What can be learnt? Demand side is reviewed with very little thought on managing supply.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. How important are these objectives to you?

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

Support business operations (delivery of goods around the city)

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

This is a very complicated survey. Are you trying to not get any responses? I have a degree and find it a bit over the top for a simple survey

Q6. Is there anything else you would like to tell us about the principles?

You are missing support for local businesses. Where do the loading zones go. More are needed - does this address this. How are goods getting into cafes, bars and shops?

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

More parking at transport hubs for park and ride. Encourage the use of the great train network by providing more parking at points out of the city

---

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

You are not Uber. It would have to be very clear so it doesn't catch people out. But it sounds too hard and expensive to implement

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce online application and permitting system

Limit the number of permits issued to 85% of capacity/total available spaces per zone

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Businesses located with the zone

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

Please consider more loading zones around the city

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Create two coupon parking zones - inner fringe; outer fringe, with price differentials. Those that want shorter walk can pay more. Otherwise it's only based on arrival time which is not changeable for most.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. Businesses located with the zone

5. Mobility permit holders

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Higher cost of permit for longer vehicle. Three categories - small; medium; long vehicle.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

More express buses from city to Owhiro bay please later in evening - the last express leaves the city too early.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Make initiatives cost effective but not user prohibitive

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Make payment easy and efficient.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. All existing dwellings with 1 or more off-street space

7. Businesses located with the zone

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Parking responsibly to limit impossible narrowing of drivable road.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

Public transport seems unreliable to me

Public transport route has too many transfers

I need my vehicle for work

I don't feel safe using public transport early in the morning/late at night

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Promote exploring the inner city

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

If you don't increase the amount of parking around areas like the art gallery or library, it's impossible to pay $6 per half hour at TSB Arena and you have the potential to walk 30mins or more from a free carpark. They're not accessible spaces for students or for those unable to walk that far.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

What's your solutions for any residents in central city who require a vehicle for work?

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This is making the city inaccessible. A solution would be creating a free shuttle from those cheaper areas into the city.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. Mobility permit holders
4. Businesses located with the zone
5. Second permits
6. EV owners with no off-street parking
7. All existing dwellings with 1 or more off-street space
8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

I need my vehicle for work

I don't feel safe using public transport early in the morning/late at night

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Multiple people come with me on this journey

I don't have a bike or want to purchase one

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I really think a fairly priced car parking building similar to Liechfield St in Chch with a shuttle that goes for example to the major tourist spots/ work places but is placed centrally will reduce the on street parking of shoppers and tourists allowing those who need to get to work/need a park to park there with ease.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Parking is being used as an agenda to change transport usage. Public transport will need to be massively improved to attract more users. Electric cars will need to be affordable before most can afford them. I'm interested in the current percentage of bike users.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This approach is likely to deter people from coming to the area. How about developing other centres so less people need to come to Wellington? The current work from home initiative will have impacts after the pandemic - many commuters will want to continue working from home. Is the objective to attract more people to Wellington or just have Wellington service its residents?

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. Businesses located with the zone
4. Mobility permit holders
5. EV owners with no off-street parking
6. Second permits
7. New dwellings/homes built after 2020
8. All existing dwellings with 1 or more off-street space

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Again initiatives that make parking harder will reduce traffic, what will the impact be on businesses? Parking ought to be prioritised for people who live and work in the street.

Q20. What deters you from using public transport? Please select all that apply.

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

---

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I don't have a bike or want to purchase one

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

I think parking is being used as the tool to reduce car use - and I understand why. Parking though is not the issue. Public transport, reliability, pricing, convenience, where people live and work, remote working, where businesses establish head offices and call centres - do they need to be in a major city. Who do we want in and out of the city on a daily basis - tourists, people living within 10km radius working in city? I imagine parking feels like a simple way to "fix" the problem, and feels like the wrong approach.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

We need more parking spaces not less. Parking hubs with regular and inexpensive bus links would be good.

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Businesses located with the zone

4. Other pre-2020 dwellings with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. EV owners with no off-street parking

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

not answered

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**   1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I have some special circumstances that don't apply to many but understanding them may help with policy. We have a historic house. We CANNOT have off street parking due to WCC heritage restrictions. We work from home. We have an Interior Design business that requires house visits all across Wellington as well as the need to deliver large amounts of goods door to door. Our plan is to get rid of our car and delivery ute when we retire in 15 years and use public transport or non car options. But until then we cannot operate without them. It is hard to deliver 800kg of tiles on a bus. We rely on resident parking as we can't park off the street. This has been forced on us after we bought our house by the WCC. What are we asking for. How about an annual permit for working vehicles that gives access to resident parking and loading zones? Non permitted vehicles can then be fined for parking in loading zones, and it allows trade vehicles to take advantage of resident parking during the day when many resident cars are away. A lower rate for parking permits for home business residents. The cars are usually away at jobs during the day. In our situation where there is literally no other option and we feel a little blackmailed into paying parking permit fees by a council that won't let us have any off street parking.

Q20. **What deters you from using public transport? Please select all that apply.**

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Convenience, efficiency and cost. These are all very important considerations in people's transport choices.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

More specific examples would be helpful as hard to know what these statements will actually translate to in practice

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

There should absolutely be bus stops by Council sports facilities. It's all the driving back and forth across the city taking kids to ASB, Newtown Park, school and after school activities that adds to transport congestion and car emissions. Changing the Karori bus route, means kids at Wellington College now need to catch 2 buses and takes over an hour to get home if they don't get a school bus. Meltink have turned people off using buses since their changes make it slower and more inconvenient :-(

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This could be staggered during the day/night to focus purely on peak times and not be a blanket higher rate. I often have to park so far away from where I want to go that it is a 5-10 min walk. Other times I've just given up and gone home.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Businesses located with the zone
4. EV owners with no off-street parking
5. Other pre-2020 dwellings with no off-street parking
6. Second permits
7. All existing dwellings with 1 or more off-street space
8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

New dwellings built after 2020 should include off-street parking.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Using public transport is difficult when travelling with young children/babies

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Don't get rid of public parking in the city. Consideration may also need to be given to reducing or removing public parking charges after Covid-19 to encourage people to go back into the city - particularly on weekends to support those businesses affected. I'm going to try sticking to my local suburb for a while now. Good luck!!

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

Some of them are mindless. "Support access for all" - really... "Support city amenity and safety" - of course everyone supports that....

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very unhelpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

what can the Wellington businesses afford? That is the critical question. With what is going on in the world today it is breathtaking that the council is even having these thought. All you will do if you introduce reduced access to parking is that you will kill your business rates base. The council needs to understand that New Zealanders want to drive cars for ease of shopping. To the extent that you make this more difficult you kill the city's businesses

Q6. Is there anything else you would like to tell us about the principles?

Don't try and force these plans on a public who does not want them. If you introduce them then people will shop outside the Wellington CBD, like for example the success that is being enjoyed by the shops in Petone.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

you need to make a larger allowance for commuter parking, not everyone can take the bus or the train, which by the way are of a very low service level compared to overseas experience.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

you are very clear all you want to achieve here is to force private cars off the streets. Be careful because the voters will not accept this. It is another revenue gathering exercise.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

If a second permit is issued for the same household, the second permit is more expensive

Introduce online application and permitting system

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Businesses located with the zone
2. New dwellings/homes built after 2020
3. Other pre-2020 dwellings with no off-street parking
4. All existing dwellings with 1 or more off-street space
5. Second permits
6. Mobility permit holders
7. Pre-1930s houses or pre-1940s apartments with no off-street parking
8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Introduce online application and permitting system

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Businesses located with the zone

3. Other pre-2020 dwellings with no off-street parking

4. Mobility permit holders

5. All existing dwellings with 1 or more off-street space

6. New dwellings/homes built after 2020

7. EV owners with no off-street parking

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport route has too many transfers

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

The survey doesn't really touch much on safety. It's there as a high level but could do with some more specifics. Otherwise it will lose value.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

Make the city a nicer place to live and work. Make the city more attractive to tourists and travellers.

Q3. **Is there anything else you would like to tell us about the objectives?**

Right now, I just want to get home from work without being killed.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

Get cars off the roads so traffic can flow and it's safer for other road users. And don't be lazy and hand it over to private companies like Wilson. We should have council owned and operated parking buildings. They're relatively cheap to build and maintain, they can be automated and any profit can be funnelled back into Wellington, not some overseas owner's pockets.

Q6. **Is there anything else you would like to tell us about the principles?**

Privatisation of parking buildings is just plain wrong. It's city infrastructure! We shoudn't be at the mercy of Wilson Parking who charge an absolute arm and a leg then profit from capital gains on their properties without paying tax and take the money offshore.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

I'd like to see on-street parking removed for all cars - imagine how nice our streets would be. But what's the solution for residents who don't have off-street parking? Closer to the city, maybe these people don't need cars right outside? They could have parks in the council buildings (see earlier comment) and use alternative transport (bus, bike, walk) to get them them when required? Being close to the city, they shouldn't need them every day.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Seems like a good idea, but you need to let people know in advance of a trip what the price will be. It seems like it will be hard to manage. If I'm driving into town for dinner, I'm not going to be happy if I get there and find parks have gone up in price since I left. Will anybody really drive away to find a cheaper park? Probably not, they'll just pay more. It won't solve the congestion issue, it'll just hurt people's pockets more. And sometimes you need a park nearby because you have kids or stuff.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. Mobility permit holders

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Second permits

6. Businesses located with the zone

7. All existing dwellings with 1 or more off-street space

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

See previous. Could residents close to town be given parks in council parking buildings? Being close to town they shouldn't need to use their cars most days. Then when they DO need them, they can use alternative transport (bus, bike, scooter, uber) to get to them. I see way too many cars in suburbs like Aro, Newtown, Mt.Vic etc that sit for months on end without being moved. It's an eyesore and an enormous waste of space which could be being used by actual moving traffic. For the sake of a few parked cars that are rarely moved, you're impeding the flow of thousands of vehicles.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Public transport needs to be better. I catch the EastWest Ferry when I can, but it's expensive. Buses are too unreliable. I ride my bike home from WLG to Eastbourne and it's absolutely terrifying. Parking is the main point of this survey, but it's all interrelated. If it's easy for people to use alternative transport, they won't bring their cars, then there are less issues with parking. Fix the bike lanes between the Hutt and WLG city. It shouldn't be too hard. There's a dedicated lane for some of the way, but it's difficult to get onto, and suicide to get off of. Go back to multi-story parking buildings - owned by the council. Parked cars on the roads just clog things up.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Other pre-2020 dwellings with no off-street parking

3. Mobility permit holders

4. EV owners with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I live in Thorndon where the residents parking seems manifestly unfair. The Chinese embassy gives resident parking stickers to staff who don't live in the area. Other Thorndon residents drive to other residents parking, because they are lazy. Flats and houses with many occupants with many occupants and offstreet parking get permits while others with no vehicle access don't get them. People turn up and park because they know parking wardens don't come, or won't turn up fast enough to catch them. The areas are too big. One outside our property is too small to fit two vehicles, the other is too small to fit four. But they all try, and end up giving us very little room to turn in and out.

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

There are too many cars for the parks, cars are way bigger than they used to be.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Move away from using the road for parking cars, and instead re-purpose it for transport use, specifically for cycleways.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

None of the above

Provide car share, mobility and micro-mobility on-street parking spaces

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Businesses located with the zone

2. New dwellings/homes built after 2020

3. Second permits

4. All existing dwellings with 1 or more off-street space

5. Mobility permit holders

6. EV owners with no off-street parking

7. Pre-1930s houses or pre-1940s apartments with no off-street parking

8. Other pre-2020 dwellings with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Yes you didn't have the category of 'remove residents parking scheme'

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Overall its a not the best survey unfortunately. For example to doesn't address: *** if we should have so much car parking on the street. *** you don't question if we should still having Residential Parking. *** re cycleway inftrastructure - you didn't address that people have to drive to work (and need parking, both at work and at home) because there is no safe high-quality cycleway infrastructure.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very unimportant
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

No

Q3. **Is there anything else you would like to tell us about the objectives?**

Central Government is currently consulting on its draft land transport gps, so the objectives and policy principles of this draft parking policy should be considered against the four strategic priorities in that draft gps.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

I think that the price-based methods are important to consider as they can be effective but also inequal.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

All zones should have active and public transport in the highest priorities. All zones should list short stay parks and residents parks and commuter parks as the lowest priority in every category. For example in the city centre, short-stay parking is listed as a high priority. Another example is that in outer residential zones, the bicycle and motorcycle are listed as low priority. In the suburban centres, the bus stops, the bicycle and motorcycle and all ride-sharing should be highest priorty.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Pricing structures are good under the principle of 'user-pays' but is not particularly effective at reducing all demand, but rather causes inequality where those who can afford to pay for parking have access, and the poorer people are excluded. Increasing charging is a good idea and I support its use to reduce the bulk of parking demand, but it is not proposed as a sole tool (which is a positive).

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

If a 'Household A' chooses to not own a private motor vehicle as an altruistic act to contribute to a healthier city with less emissions and congestion, that house should be given one parking space that they can leave empty, rather than 'Household B' having two cars, and still causing the same poor streetscape.

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

The draft policy does not do enough to reduce private vehicle use in the city, and will essentially reshuffle the existing pack of cards, rather than lead to meaningful change. There needs to be a gross reduction in the provision of car parking, opening lots of space for active and public transport.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

not answered

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

not answered

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Parking time limits on Residential streets, 4 hours max (i.e. visiting the area for social or recreational reasons). If anyone wants to park longer than that they need to pay for it. Including residents - they need to buy a permit and have a spot available to them fairly close to their house. Problem is when a property has high density and all the occupants own a car - they all need to be allowed to buy a residential parking permit if they can prove that is their primary residence.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Public transport route has too many transfers

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

There should be no free parking anywhere on WCC streets (except maybe in residential areas for visitors, like for 4 hours). Every inch of pavement should have a price associated with parking and it should be super easy to pay. Also, we need more "pull over" areas for taxis and ride shares - they disrupt both traffic and parking.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

no

Q3. Is there anything else you would like to tell us about the objectives?

no

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

no

Q6. Is there anything else you would like to tell us about the principles?

no

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

no

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

no

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. Second permits
6. Businesses located with the zone
7. New dwellings/homes built after 2020
8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

no

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

I would like to drive to Oriental Bay and the car park near the Freyberg Pool in the weekends for exercise (running) and think the parking for this should be free.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Support sustainable transport policies Support pollution reduction policies

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Avaiability already drives parking behaviour

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. EV owners with no off-street parking
4. Pre-1930s houses or pre-1940s apartments with no off-street parking
5. Other pre-2020 dwellings with no off-street parking
6. New dwellings/homes built after 2020
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

Support an inclusive city where people can safely choose to walk, ride, scoot.

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

Be prepared to remove parking... it takes up space that could be used for walking, cycling, ...

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

not answered

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

You need to be prepared to remove parking spaces.... or only off street parking.

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

It all seems like revenue gathering, you are not thinking about the people who walk, cycle, etc. Getting Wellington moving will require less cars parked on the roads so they can be used for moving.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

When the weather is bad, I choose to use my private vehicle

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Other pre-2020 dwellings with no off-street parking
3. EV owners with no off-street parking
4. Pre-1930s houses or pre-1940s apartments with no off-street parking
5. New dwellings/homes built after 2020
6. Businesses located with the zone
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Discourage off-street parking conversions as they degrade streetscapes and privatise parking space (conversions don't generally increase parking capacity)

Q20. What deters you from using public transport? Please select all that apply.

None of these, I use public transport regularly

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

not answered

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Support community resillence

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

Support reallocation of existing parking space to other uses e.g cycle or scooter parking, gardens/tree planting, community space

Q6. Is there anything else you would like to tell us about the principles?

Variable charging (widen peak period, CBD levy) should be considered to encourage park & ride and spread usage evenly across the city.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

The impact of commuter parking and resulting vehicle movements on streets adjacent to coupon parking areas can be really significant e.g large numbers of vehicles from outside Te Aro looking for free parks. This can have a significant impact on the safety of streets for pedestrians and vulnerable users and the environment and should be discouraged. Parking provision, except where it aids mobility/accessibility, is a privilege not a right.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

Supporting business well-being must be reviewed with potential mode-shift to walking and cycling in mind, not solely from a car-parking perspective. Overseas examples show that making businesses more accessible to people on foot and on bikes can increase business profitability, however this is often overlooked by businesses who feel that most customers arrive by car.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

The most important one here is regarding the need for being efficient rather than just increasing supply. I'd love to live in a Wellington where parking is not allowed and not even considered in places which should be primarily for efficient movement of people on bicycles, mass transit or on foot.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

I may have misread this, but bus stops should have a high priority at community facilities. Standard short stay Parking (non-mobility) provided close to the entrance to community facilities incentivises car use. Having bus stops conveniently located incentivises public transport use, Freyberg Pool is a great example, Wakefield Park is a poor example where the nearest bus stops are inconvenient.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

This has to be regularly reviewed, please built an annual review process into how parking is priced as behaviours change in response to pricing.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. All existing dwellings with 1 or more off-street space
3. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Public transport timetable doesn't suit my schedule

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

These policies are great, I would like to see all streets in Wellington reviewed in terms of these guidelines, not just for the policies to apply when new things are built.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Prioritise access for people with disabilities. It belongs at the top of the hierarchy, alongside pedestrians. Strengthen the focus on our transition to a zero carbon city by 2030.

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

I can't see any consideration of Te Tiriti in the discussion document. Suggest you get some advice from Tiriti partners.

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This is consistent with Donald Shoup's advice. See https://www.goodreads.com/book/show/101843.The_High_Cost_of_Free_Parking

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

It's not clear why residents should have priority over others. Other Council services are not offered on that basis. What's the logic here? Spell it out in the policy.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Thanks for the opportunity to have a say. This is is vital policy for shaping how our city works better. I understand that Covid concerns take precedence right now. I encourage the Council to make sure people have the opportunity to have their say, but not to unduly delay introduction of the parking policy. It's a powerful tool in driving transport change, and improving our lives.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Second permits

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

I don't feel safe using public transport early in the morning/late at night

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

Clearways to allow two way access from suburbs close to the city.

Q3. Is there anything else you would like to tell us about the objectives?

Many suburdan streets are blocked by parked cars belonging to people bring their cars into wellington for work rather than using public transport. Since the lockdown this probelem has gone away which shows most of the psrking problems are caused by people bring their cars to work and parking in the suburbs close to the city.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. Are there any principles you think we have missed?

Safty issues caused by parking to be considered. E.g. reducing one-way situations, providing give way signs where streets are reduced to one-way situations, limiting speed where roads are reduced to one lane,

Q6. **Is there anything else you would like to tell us about the principles?**

Provide off street parking areas for commutes. E.g. Using park of Appleton Park for parking so streets can be clear.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Commuter parks to be restricted by clearways during the day and more coupon parkings.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Other pre-2020 dwellings with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Residents that have garages should use them for parking their vehicles and not for storage.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Yes, please address commuter parking in the suburbs close to the city so the streest are not reduced to one way. Also address safty issues of where commuters park.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. How important are these objectives to you?

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Changing the pricing won't influence how long people need to stay in a park for. If you have a 30min appointment it is 30mins, regardless of how much the parking costs

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking
3. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20.	**What deters you from using public transport? Please select all that apply.**	Public transport timetable doesn't suit my schedule
		When the weather is bad, I choose to use my private vehicle
		I have to make multiple stops or multiple journeys

| Q21. | **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.** | Multiple people come with me on this journey |
| | | I have to make multiple stops or multiple journeys |

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Short stay parks are also needed for visitors to city fringe residents. City fringe should not be used for commuters or other long stay parking.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Coupon parking is too low and should be increased to shift commuters to public transport.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Second permits

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

New builds without off street parking should not qualify for residents parking permits - this is part of the price residents pay to live in these properties. An audit should be completed of resident parking permit holders who have off street parking but choose not to use it.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I don't have a bike or want to purchase one

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

I would love to use the train for all my trips into the city but regularly find them out of action when I want to use them (off peak and weekends).

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This approach is a barrier for for people on low incomes and with mobility needs. It would actively discourage people from participating in the vibrant city that we live in

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Businesses located with the zone

4. EV owners with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. All existing dwellings with 1 or more off-street space

7. Second permits

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

When the weather is bad, I choose to use my private vehicle

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

This can't be nearly real-time on an hourly or daily basis - it must be at least by month so that people are clearly told about or can find out about the charging areas in advance.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. Businesses located with the zone

5. EV owners with no off-street parking

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

Covid-19 is going to change patterns of behaviour. Demand for parking may not be a problem in the short/medium term - on the contrary, people will need to be encouraged to go into the CBD to shop, eat and visit museums etc

---

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

Not that I can think of.

Q3. **Is there anything else you would like to tell us about the objectives?**

The first objective 'Support shift in type of transport used' seems pointless in itself. I would see it as something which enables the others.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

No

Q6. **Is there anything else you would like to tell us about the principles?**

No

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

No

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Q18. **Allocation of residents parking permits Please rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

It would be great for it to be very clear whether you can park freely. Sometimes look at the signs and still am not sure, this is especially in areas with coupon parking. Maybe this won't be the case with what WCC comes up with, but clarity is very important anyway!

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

I think that new housing should not be entitled to free parking on the street. In Japan you can only buy a car if you have a permit that proves you have somewhere to store it privately. As far as I am aware new dwellings in the suburbs must have 1 off-street carpark, but so often the residents will have at least 2 cars which means one on the street. Since new dwellings tend to be in-fill builds in existing suburbs it makes for really congested streets. Also, often people have off-street parking but don't actually use it, preferring to park on the street. In major arterial routes such as the Karori Road this space should be used to widen the street in order to provide bus lanes. Free and secure bike parking outside public facilities is also really important as it makes this mode a much more attractive alternative to cars. Perhaps WCC could look at finding ways to assist businesses/workplaces to provide this to their staff. I think it's important that tradespeople be able to park easily for a few hours outside where they need. I don't suggest they be allowed to park as long as they want day after day for free if they are working on a long job for which another arrangement may perhaps need to be found, but I would like to see them find places with some ease. They have a lot of heavy equipment and are important to us all from time to time. I'm very much in favour of swapping car parking for dedicated bus lanes on routes where they run. Thanks!

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

No

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

Support access for quick trips?; Support access for tourism (eg freedom campervan parking)?; Support access for campervan / trailer parking?

Q3. **Is there anything else you would like to tell us about the objectives?**

I feel that you're 'squaring off' objectives against each other by making them so simplistic. There's a big divide between commuting and short trips. For example, I live in Newtown where the bus travel time to CBD is more than double the time of a car trip. During the week have no problem taking the bus when I travel to the CBD for work because I'm going to be there for 8+ hours. However, if I want to meet someone in town, I'm not going to give up 80 minutes just to support mode shift. Instead, I'm going to drive and will want a short-term car park so I can support a local business.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

I think that there's a risk in making your prioritisation hierachy too rigid and will unfairly benefit some and unfairly detriment others.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I strongly oppose the use of parking spaces for a) taxi stands, b) EV charging and c) car share. Firstly, with the wide availability of app-based taxi services, there's no longer a compelling argument for council space to be used for taxis--it's actually counter-productive to allow vehicles sitting idle when you should be encouraging them to maximise their turnover. Second, EV charging and car share schemes could easily utilise private car parks. EV charging can also be done at many other locations, so there's no reason council should get involved. I'd change my view if the private car parks refuse to allow EV charging companies to install their equipment.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. All existing dwellings with 1 or more off-street space

6. EV owners with no off-street parking

7. Second permits

8. New dwellings/homes built after 2020

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Limit the number (and size) of motorhomes & caravans / utility trailers / boats, etc. that can be parked on streets. There's a motorhome on my street that easily takes up 2 spaces and there are at least 2 trailers that I can't recall ever seeing move. Regarding the EVs, I would only support this if they installed charging stations or otherwise needed a dedicated spot so they could run an extension lead to their car.

Q20. What deters you from using public transport? Please select all that apply.

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

Throughout the policy, you make allowances for EVs. That seems like a tax on those who can't afford them. In my case, I won't buy an EV because I'd lose money on my car and my use case doesn't support buying one (they're far more suitable for short trips than long road trips). In addition, you should be priortising mode, not technology (IE public transport, not EV vs ICE). Also, back to the priortisation, there should be priority for more rapid transport than dedicating parking spots for frequent bus stops. Next, in Newtown, there are many multi-unit dwellings and allowance should be made for # of adults, not simply # of households. Lastly, you 100% should be mandating new dwellings be built with car parks. There are new apartments and new homes being built today in Newtown with no carparks--that's absurd and I'm certain it will increase demand on an already-stretched community.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. All existing dwellings with 1 or more off-street space

4. Second permits

5. Pre-1930s houses or pre-1940s apartments with no off-street parking

6. Other pre-2020 dwellings with no off-street parking

7. Businesses located with the zone

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

No

Q3. **Is there anything else you would like to tell us about the objectives?**

No

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Motorcycle parking should be prioritised more as should bicycle parking.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Paying for parking needs to be simple - credit card should be able to be used everywhere and not incur disproportionate fees

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. EV owners with no off-street parking

6. Second permits

7. New dwellings/homes built after 2020

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

All of the objectives are important, however I think those that relate to climate change and actions to address it should be prioritised higher than the others.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

It's not clear whether the following text in Principle A means that it's possible for parking changes to delay transport changes or visa versa. For example the delay on the Newtown connections cycle planning until this new parking policy has been agreed. "Consequently, changes to how parking is provided and managed need to be made incrementally over time, in consultation with effected communities,and support and be aligned to improvements in the overall public and active transport system."

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

A definition of key transport routes would be useful. Karori Road and Glenmore Street should be in this category. They both have problems with delays for buses and unpleasant cycling because of parking spaces taking up space. I think that car share spaces should be high priority in the central city.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Could there be differential pricing for different vehicle types? For example cheaper for smaller, less polluting vehicles (not just EVs) and higher for larger, more polluting vehicles like SUVs and utes.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

I am pleased to see this from page 13 of the Discussion Document. "Active modes…and public transport have the highest priority. This means that when we are making decisions on using road space, they take a higher priority to parking." I hope that this will be included in the forthcoming Transport Strategy 2020–2050 and that delays on roads such as Upland Road in Kelburn and Karori Road will soon be improved by removing parking and allowing the space freed up to be used by active and public transport modes. This would be a quick win. Page 16 of the Discussion Document discusses considerations for the area based approach and includes 'current and proposed transport system improvements'. This should be altered to consider improvements that are needed but not currently proposed. For example, there is little proposed to improve cycling between Karori and the city centre and there is an increasing need to do so. Outcome measures are discussed on page 17 of the Discussion Document. They include reducing carbon dioxide emissions from vehicles. Other air pollutants should also be measured. Park and ride only applies to train travel. Is there any scope for park and ride by bus?

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

We support the proposed objectives of the Parking Policy

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

We support the proposed principles of the Parking Policy

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   not answered

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

not answered

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

We support the high priority value attached to mobility car parking spaces throughout the Parking Policy. Consider creating at least one mobility car park on each side street of the Golden Mile. 3566 mobility parking permit holders with a Wellington postal code address, only 28 spaces in central wellington, under resourced. Consider creating at least one mobility car park, on road, close to essential services throughout the CBD. Include: medical practices, banks, supermarkets, dentists, WINZ offices, schools/education centres and short-stay drop off mobility car parks at entertainment hubs. Consider creating at least one mobility car park, on road, close to essential services in all suburban centres and the city fringe, as above plus recreational facilities. Consider increasing the number of mobility car parks at Council owned recreational facilities.

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Recommend that the pricing approach of demand responsive be deferred for mobility car parks. Instead a flat rate be applied across all mobility car parks.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Ensure there is a process for individual residents to request mobility car parks in residential areas.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

I don't have a bike or want to purchase one

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

Ensure that all mobility car parks meet current standard and where possible extend to current best practice. Ensure that they are monitored, enforced, and cross-referenced to the other complimentary policy documents.

Submission from CCS Disability Action Wellington Raewyn Hailes Received 9 April 2020

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

not answered

Q11. Outer Residential Areas High parking space priority: bus stops, urban design features, then residents parks. Medium parking space priority: car share parks, mobility parks, then EV charging parks. Low parking space priority: short stay parks, loading zones then public bus layover. Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks. To what degree do you think we have this correct for residential areas?

not answered

Q12. Council Parks, Sports, Recreation & Community Facilities High parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features. Medium parking space priority: EV charging parks. Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks. Lowest parking space priority: public bus layover, loading zones then bus stops. To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

not answered

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks. Medium parking space priority: car share parks, EV charging parks, then commuter parks. Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands. To what degree do you think we have this correct for Council's central city off-street parking?

not answered

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

I support the proposal to remove on-street parking from key transport routes. On-street parking on key transport routes is a safety hazard and inhibits the movement of vehicles including bikes and buses. An example is Raroa road, which is a key transport route between the central city and western suburbs including Karori and Wilton. On-street parking on this road often reduces the road to one lane (for example in the section between Moana road and Plunket street), causing traffic in one direction to be halted. This creates the risk of traffic accidents, heightened by the road's blind corners, and is particularly dangerous to cyclists. It delays buses and other traffic, wasting time and reducing the city's productivity. The proposal to remove on-street parking from key transport routes like Raroa road would: • facilitate a shift to cycling and public transport • support safe movement • support business wellbeing • support city amenity and safety.

Tim Sparks Received 14 April 2020

Q15. Do you agree with this pricing approach?

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1.

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Q22. **Do you have any final comments about the topics raised in this submission?**

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Rather than in low-demand areas "to encourage people to park" I suggest "to enable people to park". Encouraging parking means encouraging private vehicle use, which is inconsistent with other WCC policies.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Businesses located with the zone
5. All existing dwellings with 1 or more off-street space
6. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I think the age of a building is not relevant, so where I've shown no priority in q18 they are all 3=.

Q20. What deters you from using public transport? Please select all that apply.

None of these, I use public transport regularly

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

not answered

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

- Provide low-cost means to travel quickly around the city. - Provide a discussion about the fairness of road space allocation

Q3. **Is there anything else you would like to tell us about the objectives?**

If you look at road space allocation, parking is a highly economically unproductive use of space. This is not currently discussed at all in any of these objectives.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I appreciate how you've structured this, and agree with the framing.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Per the work of Donal Shoup, the pricing should be reviewed frequently (ie. every three months) and beyond basic costs, the additional revenues should be dedicated to the area that the revenue is collected. This way, we get buy in from the community that the 'parking costs' will be spent in their area.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Resident parks should be marked to market rates, even if they carry some sort of a discount. This is not private space - these people don't 'own' their parking. It's a public resource. Per the work of Donald Shoup, any increase in revenues in these areas should be offset against rates to increase resident buy in to the increase in costs/reduction in parking supply. Finally, all arterial roads should have bike/micromobility lanes to provide safe movement for those engaging in mode shift. This is currently not priced in, and half the shitfights that residents have is because they all get free/massively subsidised parking. If there was a way to more accurately price this resource, then the discussions about bike lanes would be a lot easier to have.

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Public transport timetable doesn't suit my schedule

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

I just want to commend you for the excellent work so far - this was a very well designed study and consultation. I am very heartened by the questions and prioritisation matrices that were presented. You've done a great job framing the issue and the trade-offs well.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Very unimportant
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat unimportant
Support access for all	Very unimportant
Deliver service excellence and a safe working environment	Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Great policy - go hard and go early...so that other improvements can be made to the roads

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

Space utilisation in general should be a priority - i.e. freeing up space for other modes by reducing space for parking. Given COVID-19 and the Government's tactical urbanism package, the need to reprioritise space away from cars has never been greater - and parked cars take up an enormous amount of space.

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

In outer residential areas, I would prefer bicycle/micromobility parking to have the medium priority.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

I am very pleased to see that WCC is taking a systematic approach to reallocating space away from parking and towards active modes and public transport. However, mobility and access issues need to be thoughtfully addressed while doing so, for reasons of both justice and political acceptability.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

They're confusing and unclear. I'm not entirely sure what they actually mean.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Neutral

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I have put neutral for every answer because I find the questions very confusing. It's not about the area - it should be about the type of street or road it is. An arterial road in an 'outer residential area' should still be prioritised for movement.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

What about car-share schemes? Presumably they would have permits as well?

Q20. **What deters you from using public transport? Please select all that apply.**

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

I would love to sell my car, but I still need one from time to time. The best thing that could happen to finally push me to selling my car would be a decent car-share scheme in the suburbs.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

Reduce car ownership.

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

Non-accessible parking supply should shrink over time as a principle.

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Move EV chargong spaces into lowest priority for all questions. Move short stay parks into lowest priority for all questions. Residents parking should never be a high priority and should not be free citywide. Off street parking should also be part of an overall principle of parking reduction over time.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I agree that pricing should be responsive to demand. I feel strongly that there should be no place, bar private property, that parking should be free at any time. Even car ownership storedon private property should incur a rates component for better targeted user pays for using the car on local roads.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I didn't want to rank any of the categories in question 18 other than Mobility permit holders.

Q20. **What deters you from using public transport? Please select all that apply.**

Other (please specify)

Using public transport is difficult when travelling with young children/babies

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Not ambitious enough for reducing car use. This work looks to me to be focussed on improving the parking experience rather than sending enough nudges for behaviour change. Also - having a yearly permiy system will obfuscate the parking expense - putting it out if mind for most for most of the year. For this reason, perhaps widening the coupon parking approach would be more effective as it would bring daily friction to the users we want to. Making parking easier, even as you raise the expense will still result in more use. Is that the goal?

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

The Council should maintain control of the delivery of parking services and not enable private parking operators unfettered opportunity to meet demand

Q3. **Is there anything else you would like to tell us about the objectives?**

"delivery of service and a safe working environment" is core business which should not be confused as an objective by focusing on excellence - it would be pointless to offer average and poor service as an objective

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Prioritise Council owned parking operations above privately owned operators

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

mobility park, bicycle / micro-mobility should be a high priority on key transport routes as last mile transport provision

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

pricing approach needs to be clear to user - Wellington City parking appears to be treated as a revenue stream which causes friction between enforcement and public. The more drastic option of removing parking spaces would remove demand and encourage transit use.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Provide car share, mobility and micro-mobility on-street parking spaces

Introduce online application and permitting system

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Businesses located with the zone
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. EV owners with no off-street parking
6. All existing dwellings with 1 or more off-street space
7. New dwellings/homes built after 2020
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

support parking away from home and encourage use of micro mobility to connect home to car

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Q22. **Do you have any final comments about the topics raised in this submission?**

I think all of your questions are looking at one side, how to reduce demand for parking. You should ask at least one more open-ended and less pre-determined question, e.g. – "what is the forecast demand for parking in Wellington and how might Wellington best go about meeting that demand?" My view that your position is pre-determined is reinforced by the way you interpret results: for example on Question 9, p21, you note as though it is a high level theme that 18% support removal of unnecessary car parks. A more valid interpretation is that 84% did not choose that option. You emphasise 40% favour more public transport (so do I); but the same figures show 60% did not. I suggest that (after post- coronavirus recovery) • Population growth will resume – more cars • Affluence will grow – Stats says annual wage increases for years exceeds inflation, growth in real terms – more cars • Big switch, I hope, to electric cars – removing CO_2 emissions guilt – more driving • Driverless cars – people now unable to drive can have a car of their own. I support investment in the best public transport, car ride share, and all sorts of other projects to reduce driving but there is no evidence these things will override the four bullets above and other convenience factors supporting driving and parking. I recommend the City face up to this a bit better. With thanks Neil Plimmer Received 14 April 2020

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

not answered

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

not answered

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

The principal parking issues in the outer suburb residential areas arise in connection with: • parking in the vicinity of the airport (Mirimar) • parking in the vicinity of the commuter train stations in Tawa (Linden, Tawa, Redwood and Takapu Road) • parking in the vicinity of commercial enterprises outside of the town centres e.g., along Main Road Tawa between Takapu Road and Tawa Street, including associated with the commercial enterprises in the vicinity of Sunrise Blvd (in particular the Kindercare Childcare Centre). 2. The policy for these areas would be better if it were adapted as below. Parking management issue Parking management tools Comments Overspill activity has a minor effect on parking in neighbouring streets. Accept overspill. Intervention hierarchy based on level of effect: Low to severe Overspill activity has a moderate effect on parking in neighbouring streets. 1. Increase monitoring and enforcement to discourage illegal parking activity. 2. Introduce time restrictions, 2. Explore options including with other organisations (both public and private1) to increase the availability of park-n-ride commuter parking. There is little to monitor - monitoring and enforcement helps but no more than at the margin. Sometimes there is more vacant/under-utilised land around than is commonly realised. Wellington is not Tokyo! The collaborative arrangement between Outlet City and the Regional Council is one example of what can be achieved. There are other areas not far from train stations that are un-utilised - has anyone explored those opportunities? Overspill activity has a significant effect on parking in neighbouring streets. Overspill parking is creating a safety hazard, materially eroding residents' amenity value, eg, parking for visitors, tradespeople etc is unavailable, or preventing access for emergency and service vehicles. Illegal parking activity is high (such as parking on the footpath). 1. Explore options including with other organisations (public and private) to increase available parking - particularly park-n-ride commuter parking 21. Explore options with partner organisations to increase alternative active and public transport use, such as travel demand management planning incentives, and bus scheduling. 3. Introduce time-limited parking e.g., 120 minute parking, with exemption 'coupons' for residents (for own and visitor/tradespeople parking) 2. Introduce parking restrictions and clearways. 3. Introduce a charging regime to manage demand. As above. No harm in exploring, but in Tawa at least unlikely to be a solution. The parking pressures come mainly from park-n-ride parking - a product of investment in public transport that is increasing, not reduce, the demand for parking space! Residents of Sunrise Blvd have been advocating for this solution for some years - but it has not been taken up, I understand because Council has reservations about enforceability. But going by the proposal in row 1 above, that may no longer be barrier to adoption - particularly given that introducing a time limit would result in there being something material to enforce. 1 An example of what can be achieved from collaboration with private providers is in Tawa, where the Outlet City mall has availed a sizeable area of its parking for weekday commuter parking

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Taking a slightly longer view, Council, in collaboration with the Regional Council, should start thinking about shifting further in the direction of pricing suburban parking, at least where there is persistent excess demand - particularly persistent excess demand for park-n-ride parking. The substantial improvement in the commuter rail system has successfully lifted rail commuter patronage - to the point where shortages of park-n-ride parking will be both frustrating further shifts from commuting by car into the city, and is impacting adversely on adjoining residential streets. The logical next step from step 3 in row 3 of the table above would be to introduce 'coupon parking' for park-n-ride facilities and the adjoining streets - again with an exemption 'coupon' for affected residents. That could be a first step toward 'commercialising' provision of park-n-ride parking, including, potentially the building of parking buildings at major park-n-ride hubs. Accordingly, I urge Council to begin engagement with the Regional Council on taking a longer-term and more integrated view on optimising the performance of the commuter rail network, commuting by car, and parking. That should include integrated 'ticketing' for not just rail and bus networks (something talked about for decades?), but also to include integration of charges for park-n-ride parking, and, of course, congestion charging on the key arterial roads. And it must include rational consideration of the proper role of pricing. Even on just parking, the current consultation paper recognises that there is already excess demand, and that excess demand may well increase (although who knows how much 'working-from-home' might affect work, and associated commuting, patterns). Typically where that is the case for anything else, in efficient markets (whether for cauliflours, or flour, or houses), the price increases. Rationing by bureaucratic fiat (the 'Soviet' approach) is rarely efficient or fair. Hence the proposal to start thinking more about price-based rationing (coupon parking) in the vicinities in question.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Q22. **Do you have any final comments about the topics raised in this submission?**

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important

Q2. Are there any objectives you think we have missed?

As part of safety for all and business wellbeing - taking an evidenced based approach to what we know works rather than listening to loud voices scared of change.

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

Having parking available for those that need to drive is essential, but in order to keep road space clear for moving transport (including bikes and micro mobility, as well as more space for pedestrians), I think we should remove most on street parking and make more use of the parking that's in alcoves and corners (ie on street, but not in the flow of traffic). This should then be prioritised for disabled, loading etc. I think there is merit in the council utilising empty land for parking rather than leaving it to the vagaries of private companies like Wilson. I'd rather my parking fees, however exorbitant, went to the council.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Please prioritise those who cannot use other forms of transport and ensure they can park in spaces off the main transport route. Having parking on the Main Street holds everyone up when people pull in and out and and stops us from being able to use the road space for everyone who needs to move around.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

But do not assume that low demand on street means people aren't traveling along the street. One car parked on street means a cyclist has to veer into dangerous traffic. Do not encourage people to park in any on street car parks.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Disabled people need somewhere to park their car. Everyone else has to learn that in the city, with dense housing and busy streets, on street parking is no longer a right but a luxury that many of us can no longer afford as the space is needed for moving vehicles. Even mobility permits for parking directly outside the door should only be issued to those who can not walk to their car at all.

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

None of these, I walk/bike/scooter regularly

Q22. Do you have any final comments about the topics raised in this submission?

In the past it's been difficult to change parking in the city because every parking space seems to need full council approval. This needs to change so parking spaces can be repurposed for modern usage even if there is a public outcry.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

**Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

**Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

**Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Mobility Parking should always be the top priority in all cases. Transports options are often limited for those who require mobility parking, and given the aging population, there is likely to be an increase in demand, but limited flexibility in users. Micro-mobility etc are highly mobile people who have greater choices and options so they should come after mobility parking in the hierarchies.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Although demand may be high, often this is in areas which are key to core services which often take longer than a "coffee" or "shopping trip" to complete. A mix of pricing options may be better suited for different service type areas, days and times. Weekend parking fees should be removed in areas where sport, active recreation, health and wellbeing services/facilities/opportunities are present to encourage more people to get out and active - taking into consideration reality such as having physical impairments, children and also Wellington's weather!

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces
Introduce online application and permitting system
Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

Public transport route has too many transfers

I don't feel safe using public transport early in the morning/late at night

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

Q22. **Do you have any final comments about the topics raised in this submission?**

The introduction of additonal micro transport parking options should not be done at the expense of people's safety and accessibility to the city roads and footpaths. If you have a visual impairment, scooters etc on the footpath are a hazard. Parking for these smaller modes of transport need to be creative both in design and function, such as the 2-level bike rack on Grey St.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Q2. Are there any objectives you think we have missed?

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

The Proposal contains no provision for bus and coach parking at Wellington's civic venues and major attractions which will often attract out of town coach attendees. WellingtonNZ acknowledges the proactive and helpful relationship that exists with Wellington City Council officials around major events and wish to see this continue. • There is no mention of WCC's own development of the Wellington Convention & Exhibition Centre catering to up to 1600 delegates and daily exhibition visitors. This will require coach parking for delegate transfers. Due to open early 2023, this will have drop off zones but not onsite coach parking, increasing demand for layover/short term coach parking to allow delegate transfers during the day and evening. • There is no mention of accommodation pick-up and drop-off zones within the Parking Proposal. The awareness that street parking could be shifted to side streets could increase user conflict and hazards between large coaches and small personal vehicles. • There is already pressure on the few overnight coach parks available in the CBD but the current Proposal makes no provision within the city or fringe for overnight parking of bus and coaches. It would be a significant missed opportunity not to identify a CBD fringe area which can operate as parking for major events, WCEC, and overnight coach tours for peak periods. The bus and coach sector has been vocal about these challenges for two to three years as CBD parking has constricted and has been asking for WCC guidance on a long-term solution. We are aware of confrontations in front of visitors and driver abuse directed at Wellington City Ambassadors and i-SITE staff in the Wakefield Street coach parking area. The height of most coaches makes a private sector solution difficult as they cannot use parking buildings. • The layover area along Kent and Cambridge Terraces is likely to be removed as Let's Get Wellington Moving impacts key transport routes through the city and WCC continuing to suggest that this area be used for overflow has only increased frustration by touring companies. • Wellington is already viewed as the most difficult city in the country for coach parking and the city risks losing the tour series business which provides a cashflow backbone for many in Wellington's accommodation sector. Series scenic tour operators such as APT, Scenic Tours, Contiki and Scenic Tours operate multi-day coach tour holidays. These are high value, regular business partners for many accommodation providers from backpackers to five-star hotels. WellingtonNZ has invested considerable time and effort over the years encouraging these itineraries to stay two-plus nights in Wellington to increase visitor spend and economic impact for the city. Coaches generally arrive into Wellington from Rotorua or Napier late afternoon and are often used for city sightseeing in two-night stays. Coach size varies from 22-54 seaters. Coach tours are important to Wellington as they bring higher value visitors. Their economic contribution is likely to include two nights four or five* hotel accommodation, attraction entrance fees (such as Zealandia or a guided Te Papa tour) plus dining out in the city and retail spending. Conference delegates are also significant contributors at an average per person per day spend of $362. • The cruise sector has been a significant contributor to Wellington's visitor economy for many years. Since the Kaikoura earthquake it has been necessary to bus visitors off CentrePort and into the city.

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Q22. **Do you have any final comments about the topics raised in this submission?**

We request the Proposals use this opportunity to address: • The immediate shortage of coach parking that can be used from 6pm-8pm by tour buses overnighting in the city. Dual-use parking could be considered to maximise usage, with loading zones available during the day becoming overnight coach parking. • The identification of a suitable CBD/fringe location where buses and coaches are able to standby for 30 minutes to be within easy distance of major event venues, attractions and the Wellington Convention & Exhibition Centre. • Provision of medium-term surety for the two cruise stops currently operated at Wakefield Street and Lower Lambton Quay until CentrePort walk-off access can be resumed.

David Perks, GM Regional Development, Destination and Attraction, WellingtonNZ

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

not answered

Q8. **Central City High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

not answered

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

My business has grown significantly over the last 2 years and my company is constantly having issues with parking in the city when cruise ships are in port. I know that the cruise ship tours may not happen this year but they will be back in future. The number of cruise ships visiting Wellington has increased by 50% since I have been in the tourism industry. We are constantly having issues with parking our tour buses when the cruise ships are in town. The problem areas are Weta Cave, Top and Bottom of the Wellington Cable Car, Parliament. This year we were fortunate to have bus parking outside the Amora Hotel on cruise days and I hope that continues in the future as this enable our guest to easily be catered from the i-Site and shuttles from the cruise ship. However even there was signage saying it was coach parking on cruise days, cars still parked there and caused problems with buses trying to get in and out. Some drivers were also very confrontational with our staff when asked to move on. This year our company is producing a 2 day product for the domestic market and we will need somewhere to park our buses overnight. The areas currently designated for this are fast becoming full and sometimes we struggle with overnight parking which we will need if the2 day product is to be successful. So when you review the bus parking I would like you to consider these issues that tour operators face when trying to accommodate tourists (that bring dollars into the capital) in the city area.

Q15. **Do you agree with this pricing approach?**

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Q22. **Do you have any final comments about the topics raised in this submission?**

As the General Manger of the James Cook Hotel, I would like to see the provision for more coach parking in the city. In normal circumstances (i.e. pre Covid-19) we have a number of Tour Series companies that bring groups to stay with us generally using 54 seat coaches. This year particularly a number of the drivers have complained to me that they find it difficult to find suitable parking for their coaches (to be honest I'm not sure where they currently park, I know there are a couple of coach parks outside Radio New Zealand House for use between 4.00-8.00pm – but after that I'm not what they do) Kind regards Steve Martin General Manager James Cook Hotel Grand Chancellor

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

I would like to see each project run through the lens of Te Atakura: First to Zero, as this would show real commitment to our Zero carbon future.

Q3. **Is there anything else you would like to tell us about the objectives?**

It would be great also to see strong movement on electrified public transport that can move people quickly from suburbs to city centre, as well as safer and more extensive cycleways. These should be prioritised ahead of roading, which only serves to encourage car-use

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

I would like to see each decision run through the lens of Te Atakura: First to Zero, as this would show real commitment to our Zero carbon future, with a move away from cars.

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. Mobility permit holders

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. All existing dwellings with 1 or more off-street space

7. Second permits

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

More EV spaces and charging too ta

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Lets go green - listen to those groups who've spent time on sustainable transport plans, and getting cars off the road as much as is possible. Give incentives to get people to opt for green , for EV's, bikes etc. Its the future They'll always be needed for going to the dump etc.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

- Ensure there is a focus on reducing car use and encouraging public transport, walking and cycling. - Ensure the creation of a liveable people based city, not a car based city. - Ensure the decarbonisation of our transport.

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. EV owners with no off-street parking

2. Mobility permit holders

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Remember, the world is changing and warming and humans are doing it. We are an ever increasing species of billions on a finite planet. Science says that de-carbonising our systems is absolutely essential for the survival of both us and other species. Many large countries (not mentioning names) have their heads buried in the sand and are moving to slow, meaning others need to listen to the scientists, be brave, wise and lead. Reducing fossil fuelled transport and encouraging walkable and sustainable people friendly cities is an admirable goal and a good start.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Residents' parks not needed at Council Parks, Sporting Facilities etc Residents' parks should shift to medium in central city off-street parking

---

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking Scheme We are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. Allocation of residents parking permits Please rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Using public transport is difficult when travelling with young children/babies

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

Control all parking in the central city

Q6. **Is there anything else you would like to tell us about the principles?**

Making access by means other than private vehicle is critically important. It needs to be as quick and easy to get into the central city and get home again by means other than private vehicle as it is in a private vehicle. Managing all parking - both council provided and privately provided is critical to success.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **   Strongly agree

---

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

As noted earlier in the central city it is vitally important to control (by by-law or otherwise) privately provided parking spaces both those leased to commuters and those available for short-term parking. Without control of these the city council is managing with one hand tied behind its back. Also, the hierarchies do not mention park'n'ride provision which in some suburban areas and outer residential areas is important. At the moment e.g. the park'n'ride spaces provided at train stations are full by 7.30 a.m. so people coming to town in the middle of the day tend to assume park'n'ride is not an option.

Q15. **Do you agree with this pricing approach?**   No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

I think demand response pricing is not the best way to look at it. Parking should be priced and timed to discourage those who come into the central city for the day (to work) from driving. If you choose to drive under these circumstances then it should be both expensive and inconvenient (need to park a distance from your place of work). People coming into the central city for shorter periods during the day (lunch, shopping) should be encouraged to look at options by a combination of price and timing (e.g. have to walk for some distance and face a 2 hour maximum). People picking-up a larger purchase, and commercial vehicles loading and unloading should be able to do so conveniently and at low cost but only for a (very) short stay. Evening central city parking should be priced so that parks closest to the popular venues are more expensive than those further away. Pricing should accept that, at least until public transport in the evening is much improved, people will often choose to drive (unlike the rest of the time where driving should be an expensive option).

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. New dwellings/homes built after 2020
3. Other pre-2020 dwellings with no off-street parking
4. EV owners with no off-street parking
5. All existing dwellings with 1 or more off-street space
6. Pre-1930s houses or pre-1940s apartments with no off-street parking
7. Businesses located with the zone
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I don't think residential parking permits should be allocated on the basis of the age of the dwelling. to discourage car use and encourage other travel modes dwellings built from now on should not be required to have off-street parking. Therefore the occupiers should have a residential parking permit if they wish. Ironically, if you have not got off-street parking it is a disadvantage to owning a plug-in EV because you cannot charge it at home!

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Managing and pricing parking is a key tool in the move to reduce car use and greenhouse gas generation. it should be done with that focus. Also required are safe routes for walking and cycling (I would not be comfortable with my 12 year old grandchild cycling on the road, but would on shared pathways and cycle lanes) and reliable and frequent public transport - 15 minute services.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. How important are these objectives to you?

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

coach and bus parking is needed in the city fringe and off-street to accommodate short term need for universities, Convention Centre, Te Papa and city venues. Better parking for micro transport is required too - having them strewn across the footpath is less than ideal

---

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Second permits
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Other pre-2020 dwellings with no off-street parking
4. Businesses located with the zone
5. Mobility permit holders
6. All existing dwellings with 1 or more off-street space
7. New dwellings/homes built after 2020
8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Obligations to consider and act on climate action

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street Parking** **High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.** **Medium parking space priority: car share parks, EV charging parks, then commuter parks.** **Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.** **To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

At no stage should long term residents parking be free. At no stage should preferred residents on street parking be low cost, or worse, free. We all pay for the streets, and we pay for our parking spaces on our own properties or other places. We should think of parking as a privilege that needs to be shared, conserved and co-ordinated. Even in out residential, people should not be able to leave cars on the street long term, or even for free. I note the trouble caused to buses with on street parking in suburbs.

Q17. **Residents Parking Scheme** **We are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.** **For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?** **Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Businesses located with the zone

5. Other pre-2020 dwellings with no off-street parking

6. Second permits

7. New dwellings/homes built after 2020

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Even new buildings should not have off-street parking in city areas, or it should be limited. We should assume that people do not have cars, and once this attitudes comes in, people live without cars much more. The world is changing and what was okay before should not guide what we need to be doing for 2025. Many cities push cars away, but still have traffic issues. Wellington needs to push cars out before it has major car issues.

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I don't have a bike or want to purchase one

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I consider Uber to be public transport, and an alternative to parking. We need to encourage these alternatives, including ebikes, scooters. On street parking has made public transport slow in some areas. This is not to be tolerated, as roads are not private property and the car park should be used to the owners (all of us!) best use.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very unimportant
Support safe movement	Neutral
Support business wellbeing	Very important
Support city amenity and safety	Neutral
Support access for all	Neutral
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

Why is a shift in transport type an objective? The council should not be trying to manipulate people's choices.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Very unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

Leaving the parking situation as it is.

Q6. **Is there anything else you would like to tell us about the principles?**

The principles seem skewed towards anti motorist policy. When did this become the council objective.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly disagree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Second permits
4. Businesses located with the zone
5. New dwellings/homes built after 2020
6. Other pre-2020 dwellings with no off-street parking
7. All existing dwellings with 1 or more off-street space
8. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

I need my vehicle for work

Public transport route has too many transfers

Using public transport is difficult when travelling with young children/babies

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Multiple people come with me on this journey

I don't have a bike or want to purchase one

I have to make multiple stops or multiple journeys

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat unimportant
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Prioritise how Council-controlled parking is managed	Neutral
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

While these principles are "nice to have" the reality is Wellington Public Transport is too expensive and unreliable to facilitate a shift in public use. "Parking is priced at a level that achieves objectives" is almost offensive, suggest that needs to be reviewed as it reads as "WCC will use any excuse or opportunity to increase parking costs even though they are already prohibitive".

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Neutral

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street Parking**High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Having "Residents" parking as the lowest priority for the city feels very out of touch. Based on the sheer number of residents in the central city this deserves to at least be in the Medium or Low priority. Having it as "Lowest" priority could be perceived as a slap in the face to central city residents who pay rates.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

While it's not ideal I can understand the theory behind it. Although if parking is in demand then this does feel like a money-grab as people will be forced to pay the higher charges due to lack of parking availability in Wellington

---

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Provide car share, mobility and micro-mobility on-street parking spaces

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Second permits
3. Other pre-2020 dwellings with no off-street parking
4. EV owners with no off-street parking
5. Businesses located with the zone
6. All existing dwellings with 1 or more off-street space
7. Pre-1930s houses or pre-1940s apartments with no off-street parking
8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Careful thought needs to be put into what contributes "no off-street parking" for example, if an apartment building has car parking for some cars in the complex but an apartment within that building does not have a car-park, does that count as "no off-street parking"

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive
Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. Are there any objectives you think we have missed?

Fairly allocate an important public resource to high value uses - free space "Locked up in traditional parking approaches" to be re-deployed higher value uses

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

Improving transparency, consistency and efficiency of decision making. Current decision making is ad hoc, no one knows where they stand, and back room deals are therefore encouraged.

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

A key issue that does not appear to have been addressed is the decision making process for applying this policy. Will it be delegated (as the district plan is) to officers to make decisions on the basis of these principles. If - as at present - every change to any parking space requires the agreement of full council, then this well intentioned policy will be quickly be undermined by squeaky wheels and cumbersome, erratic process.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

Deliver the objectives within a realistic budget without subjecting ratepayers to exorbitant rate increases. Rate increases should match inflation. Therefore, priority the projects over 10 years.

Q3. Is there anything else you would like to tell us about the objectives?

I think that encouraging motorists to use public transport is the key to ; 1) becoming an eco city and 2) easing traffic congestion in the CBD.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I think that residents must be given more consideration regarding parking near to or adjacent to their housing / apartments especially in areas that have been "swamped" by commercial sprawl.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I think that charging residents a fee for parking in their residential area is miserable, even if they area has been re-zoned commercial. The council could charge a fee to cover the cost of printing a permit . However, the provision of "adequate" bus shelters at every stop may reduce car ownership. Perhaps the provision of "suburban" car parking (building near a bus stop) for inner city residents may be one way to alleviate this problem. (provide at a modest annual fee).

Q20. **What deters you from using public transport? Please select all that apply.**

When the weather is bad, I choose to use my private vehicle

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

Q22. **Do you have any final comments about the topics raised in this submission?**

Introducing a surcharge on private vehicles within the CBD during 8am - 5pm would partially alleviate the congestion problem. But, I would allow 15 minutes free parking on any stop to allow pick-up or set-down of passengers. However, my ideal would be to have businesses / shops open from 6am til 12pm. This would spread the "peak time" traffic flow and ease the congestion on public transport. Would not be easy but an innovative and absolutely, positively Wellington strategy that would auger well for the future.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Respondent No: 205

Name: Arran Whiteford

Individual

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very unimportant
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

Lowering carbon emissions! This falls within eco-city but is important enough to have its own bullet point Support efficiency Support community

Q3. **Is there anything else you would like to tell us about the objectives?**

Access for all should be about providing access but not necessarily short term convenience to the majority. It should focus on minority groups who have different access needs.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

- Recognize that the planet is a ticking time bomb, and cannot wait a generation for us to move to clean transport. (I.e. change must not be too slow) - Recognize that unpopular decisions are necessary to achieve the objectives of changing the transport system

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Buses should be top priority always. Non-mobility parking should never be above lowest priority in the city and fringe. Car sharing parks must be prioritised above residence parking always to help the transition away from dependency on cars. Parking should be part of the insentive to move to car share. Resident parking should be strategically shifted to allow for better arterial bike or bus routes. Residents should be fine with walking a block if on an arterial route.

Q15. Do you agree with this pricing approach?

No

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

It encourages people to drive somewhere else to park, but not to take other forms of transport. All commuter parking pricing should be set at a consistently high level that discourages commuting by private car.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Introduce online application and permitting system

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Mobility permit holders

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Residence parking needs to shift to non-arterial routes to allow for footpath widening, bus lanes, and bike lanes. (not necessarily all on the same route) The residence parking scheme should aim to shift away from a reliance on kerbside parking. We should expect residents closer to the city to live without a car but have access to a car share.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Private EV parking/charging should not be prioritized as it first gives benefits to the richest. 1 bus commuter is more valuable than 1 EV commuter, in terms of impact, yet providing parking/charging for personal EVs is much more expensive. Car shares show real potential in aiding our transition to better transport. We must make it a real convenience to be part of a car share rather than owning a car — this can be done with parking incentives and disincentives.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

That those using parking should pay the cost. Having some own their own parking spaces and paint rates on it while others have cheap resident parking that blocks streets is unfair

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**   Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **   Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**   Neutral

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Disagree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Disagree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Resident parking spaces should reflect land value and rates levels in that areas

---

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

Resident parking should reflect land values and rate levels

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Other (please specify)

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Other pre-2020 dwellings with no off-street parking

3. New dwellings/homes built after 2020

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Remove the 12 resident parks at the Top of the terrace so two lanes of traffic can get thru.

Q20. What deters you from using public transport? Please select all that apply.

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very unimportant

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

Perhaps the objectives should be framed more positively in the titles, encourage instead of support, advocate etc.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Somewhat unhelpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very unhelpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Very unhelpful
Align Council operations with the parking policy and report on performance	Very unhelpful

Q5. **Are there any principles you think we have missed?**

I see that the highest priority is for safe and efficient movement of people and goods, footpaths cycleways etc but these principles dont speak to that.

Q6. Is there anything else you would like to tell us about the principles?

I believe its important to lead change for each of these principles instead of the keep everyone happy approach. This can be seen in the area based planning, while i support that an area based approach that caters to the needs is valid, I believe the outcome could easily be swayed by business stakeholders and such. People who prioritise themselves over a future oriented view

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Disagree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

**Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

Short stay parks should be moved to lowest priority in Key transport routes and central city and suburban centers, they encourage private vehicle use too much. City fringe, bicycle parks should always be prioritized at every level. For city fringe residents parks should be minimised, 1x per household onstreet etc. 12, bus stops should be highest priority, we want people using public transport at all possible opportunities. 13, again short stay parks encourage car use, it should go down to medium priority

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

At all stages in the central city pricing should be so high it discourages people to use private vehicles.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. EV owners with no off-street parking

3. Businesses located with the zone

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Other pre-2020 dwellings with no off-street parking

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

I believe the best solution is to discourage people from owning multiple vehicles. It doesnt matter what era the buildings were built in for the allocation, i would put all questions relating to pre1930s, pre2020's, and post 2020's at the same low level.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport seems unreliable to me

I don't feel safe using public transport early in the morning/late at night

---

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I appreciate the focus on walking, cycling, running and public transport but am yet to see any of this come to fruition. Wellington has spent barely any of the national funding avaliable for bike lanes and does not look to positive global models enough so sees back lash eg island bay cycleway.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat unhelpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

Pricing parking such to eliminate parking subsidies would go a long way.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Absolutely. Pricing should also attempt to match reasonable rates of return based on land values. For example, if property has a return of 5% per year for residential property, and a car park is worth about 200,000, it would be an effective subsidy if parking fees were less than 10k per year. Car parks that fail to maintain these metrics should be repurposed In essence, parking fees should go up.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Businesses located with the zone

3. Pre-1930s houses or pre-1940s apartments with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. EV owners with no off-street parking

6. All existing dwellings with 1 or more off-street space

7. New dwellings/homes built after 2020

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

enforcement of illegal parking is important for policies to be effective and align with other objectives. For example, parking on footpaths is unsafe for pedestrians.

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Basic strategy should to increase price of parking, reduce supply and enforce rules so that more people use public transport, walk and cycle.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Price it to discourage use of city space as automobile storage. Especially were cycle lanes can be put in and pedestrians can walk. A beautiful location like Oriental Bay as on street car storage is ridiculous.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking

---

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Enforce footpath parking and lift penalties

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Reducing parking in the CBD and inner suburbs is critical to behaviour change for safer streets.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

In agreement that taking an holistic long term approach in parking strategy addresses the needs of the community. Important that all voices continue to be heard and while we need a zero carbon emissions there are members of our community who rely on car and cannot afford E vehicles to get to work or recreate. Therefore the emphasis solely placed on walking and cycling must be balanced against the need for motor vehicles. The person in a wheelchair or parents with children still need to use their car to safely access services. A policy plan haing a "managed parking time" and "Golden Mile" where cars park around the perimeter of the inner city centre, allowing people to be dropped off in loading zones etc if using taxis. Public Transport ; spaces for wheelchair users, pushchairs and mobility scooters, high frequency and smaller vehicles with powered off ramps (current ramps are manual)

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

Agree with emphasis on environment and zero carbon waste and addressing issues of access for all. Concern that these principles are balanced with needs of all who live in our community ie disabled, aged,families, ethnic communities

Q6. **Is there anything else you would like to tell us about the principles?**

Principle of Safe zones -need for better laid out streets in urban and improved lighting. Access principles increase in mobility parks and use of loading zones for mobility taxis to overload clients

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I think that coupon parking should remain and more emphasis go on the inner city parking costs and place/space/time management strategy to reduce the cars coming into the inner city. This must go hand in hand with increased bus services and specific buses which can take wheelchairs, pushchairs and mobility scooters. At present they are not of a high standard across the region. Objective related to parking reduction. This needs clarify who and what are being reduced.

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Increasing cost of parking for high demand does not change the parking need. It is preferable to use shorter parking times with parking enforcement so people adhere to time-frame rather than high hourly rate.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. Businesses located with the zone

6. New dwellings/homes built after 2020

7. All existing dwellings with 1 or more off-street space

8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Consider exemption or reduction to parking permit in streets which are narrow and busy and residents car parking can result in damage to vehicles from passing vehicles/service truck. (example of such a street is upper Duncan Terrace, Kilbirnie)

Q20. **What deters you from using public transport? Please select all that apply.**

I have / I care for someone who has a mobility impairment that means I need to use a private vehicle

Using public transport is difficult when travelling with young children/babies

When the weather is bad, I choose to use my private vehicle

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

Support principle of "Access for All" policy needs to increase number of mobility parks in suburban commerce areas and inner city . Support mobility parks are able to off load from back and side of the off-loading mobility vehicle.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Neutral
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Neutral
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

Human well-being: Improve the health and well-being Of people by encouraging cycling and walking and reducing harmful particulate matter in the air.

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat unhelpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

Charge for storage of private property (cars) on public facility (roads). Discourage car ownership.

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Need to prioritise cycle lanes over parking in all areas.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

Stop trying to provide parking for residents. Discourage car ownership

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

Need to discourage car ownership. Stop trying to provide parking. Priority is cycle ways and walkways

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

I want to see a more european cycling friendly city.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Provide car share, mobility and micro-mobility on-street parking spaces

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport seems unreliable to me

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

More cycle lanes please.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

Really would like parking sorted for the Wellington Hospital as at times there are no parks for people that live in Newtown

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street Parking**High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.**To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Free parking in the weekend

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Mobility permit holders
3. Second permits
4. Businesses located with the zone
5. All existing dwellings with 1 or more off-street space
6. EV owners with no off-street parking
7. New dwellings/homes built after 2020
8. Other pre-2020 dwellings with no off-street parking

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport timetable doesn't suit my schedule

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I have to make multiple stops or multiple journeys

Q22. Do you have any final comments about the topics raised in this submission?

Timetable is never on time

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat unimportant

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

It would be great if pricing was linked to the Consumer Price Index (or Inflation)to avoid circumstances like previously where the prices were not adjusted for 10 years.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

If a second permit is issued for the same household, the second permit is more expensive

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. EV owners with no off-street parking

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. Other pre-2020 dwellings with no off-street parking

4. Mobility permit holders

5. Businesses located with the zone

6. Second permits

7. All existing dwellings with 1 or more off-street space

8. New dwellings/homes built after 2020

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

not answered

Q20. What deters you from using public transport? Please select all that apply.

Public transport is too expensive

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

Other (please specify)

Public transport timetable doesn't suit my schedule

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

I don't have a bike or want to purchase one

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

not answered

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat unimportant
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Neutral
Parking is priced at a level that achieves objectives and is consistent	Somewhat unhelpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Somewhat helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Neutral

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

No no increase !

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

When the weather is bad, I choose to use my private vehicle

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

public transport has too many transfers/multiple stops/journeys - "bad, bad!"

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

CBD central library rebuild with bus and cycle lanes connected

Q3. **Is there anything else you would like to tell us about the objectives?**

Yes, put in to future - that is "Let's do it all by 2025"

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat helpful
Provide parking space availability information	Neutral

Q5. **Are there any principles you think we have missed?**

transparency, honesty, kindness

Q6. **Is there anything else you would like to tell us about the principles?**

Yes, principles weren't an election issue

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

Agree

Q11. Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas?

Agree

Q12. Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities?

Agree

Q13. Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking?

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

see attached memo
Note from Helen Bolton - no memo attached. Followed up.

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

not answered

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Limit the number of permits issued to 85% of capacity/total available spaces per zone

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Introduce discounted exemption permits for mobility permit holders and EV car-owners

If a second permit is issued for the same household, the second permit is more expensive

---

Q18. Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Mobility permit holders
3. EV owners with no off-street parking
4. Businesses located with the zone
5. All existing dwellings with 1 or more off-street space
6. Other pre-2020 dwellings with no off-street parking
7. New dwellings/homes built after 2020
8. Second permits

Q19. Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?

Yes, see attached memo
Note from Helen Bolton - no attached memo. Follow up

Q20. What deters you from using public transport? Please select all that apply.

I have to make multiple stops or multiple journeys

Public transport seems unreliable to me

Other (please specify)

Q21. What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.

Other (please specify)

Q22. Do you have any final comments about the topics raised in this submission?

See attached memo.

Note from Helen Bolton - no attached memo. Followed up.

Q23. Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Neutral

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

I think loading zones for deliveries to businesses is a vital part of city parking life. As is access for trades people.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

None of the above

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

I haven't had a car for 25 years and it took a while to adjust to walking & catching buses (I am still able to do so). A public campaign that is ongoing to increase active and public transport and vehicle sharing is good to change people's priorities. I tend to focus my activity around the suburbs in which I live. Parking a car seems like a major hassle I am glad I don't have.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Somewhat important
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Neutral
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat unhelpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful

Q5. **Are there any principles you think we have missed?**

What does "align Council business operations with the parking policy....." mean?

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Disagree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

---

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport is too expensive

Public transport is too far from where I live or from my destination

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

Problem is bus transfers

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Somewhat unimportant
Support business wellbeing	Very unimportant
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Neutral

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Neutral
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very unhelpful
Parking is priced at a level that achieves objectives and is consistent	Neutral
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Neutral
Provide parking space availability information	Neutral
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

not answered

Q6. **Is there anything else you would like to tell us about the principles?**

Who cares if Council facilities and suburban centres are inclusive and prioritise people who can't use active and public transport

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Neutral

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Disagree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street Parking High parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Introduce online application and permitting system

Introduce discounted exemption permits for mobility permit holders and EV car-owners

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. Pre-1930s houses or pre-1940s apartments with no off-street parking
3. Businesses located with the zone
4. Other pre-2020 dwellings with no off-street parking
5. EV owners with no off-street parking
6. All existing dwellings with 1 or more off-street space
7. New dwellings/homes built after 2020
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

I need my vehicle for work

I don't feel safe using public transport early in the morning/late at night

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I am not able to physically access these modes of travel due to my personal circumstances

Q22. **Do you have any final comments about the topics raised in this submission?**

Yes we need a new mayor urgently who doesn't get funds from you know who

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?   not answered

Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City?

not answered

Q9. Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?

not answered

Q10. City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe?

not answered

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1.

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Q22. **Do you have any final comments about the topics raised in this submission?**

Many years ago when the Isle of Dogs (in London) redevelopment was still in the planning stage I went to a public meeting where a Tower Hamlets councilor was asked about new roads in the area to service the development. Her reply was we are going to do nothing to reduce road congestion. We believe in Traffic Management by constriction. If we do nothing the crowds will have to use the trains. Wellington is on a very constricted site and we really can't afford to have more than minimal car parking in the central area. Consider this: A car park is roughly half the size of a budget hotel room. The hotel room rents for around $150 per night. Unless you can persuade a car parker to pay at least $75 per day for parking then you are far better off using the space for commercial purposes. Yeah, I know the hotel room has a carpet and clean sheets and a cheap TV and the car park need none of that. That is why my guess is the true rental cost of a car park is roughly half the cost of a hotel room.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Somewhat important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

1. Health of citizens, resident (eg encouraging me to walk or cycle for my wellbeing) 2. Community cohesion (eg by having opportunities for locals to see each other, families to walk/cycle to school together)

Q3. **Is there anything else you would like to tell us about the objectives?**

The supporting safe movement objective doesn't seem well framed. Yes, we want stationary vehicles out of the way of cyclists and people walking. However this needs to be differently applied in a cul de sac from a main throroughfare. In a cul de sac, perhaps parking on the street makes sense so that more people can live in that street. Where car traffic is a minimum, dedicated bike lanes are not needed. The Principles don't seem to take this into account. It might also make sense to free up road reserve for parking if the objective must be to remove stationary cars from the streets. The policy doesn't seem to understand that car ownership is likely to decline in the coming decade. While NZ has some of the highest car ownership rates in the world, this is not a sustainable trend. Elsewhere, cars as a service (combining Uber type services with car use as required vs car ownership) is a trend that is here to stay. Every major car manufacturer has cars as a service offers in market across the globe. These services can be expected to become mainstream in NZ in the next 10 years. We could accelerate this trend away from multi car households by limiting the parking allowed to be associated with housing. The best way to reduce cars might well be to require people to park them on the street. This is not canvassed in the document at all. I can no longer effectively use public transport, and my car use has increased in the last year, going against my personal trend for the past 5. Our local bus no longer goes to where I want to go, and a trip home at the end of the day requires at least 2 buses. In wellington with our weather (wind and rain) this just isn't practicable. The time it takes to get to my work by bus is now prohibitive and I have switched to using Uber. I cannot believe this is good for the City - but it is the best option for me. I gave up cycling 5 years ago as it was too dangerous in the inner City.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Neutral
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Neutral
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Neutral

Q5. **Are there any principles you think we have missed?**

1. Health and Wellbeing of communities. 2. We will grow our City by becoming more densely populated, not by increasing the total area of the City.

Q6. **Is there anything else you would like to tell us about the principles?**

The explanations in the document are not very clear. I don't know what is actually meant by principle A, for example. Principle C should start with how to make public transport accessible, and then as a back up make the parking inclusive. Principle E sounds good, but clearly isn't what is done now. Again I think this needs a wider variety of examples. What is actually meant here? Does that mean that fewer new builds will be required to prioritise parking? or that new builds will have to prioritise off street parking? Principle H is also too vague to be very useful.

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?** | Strongly agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Strongly agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

Car share parks should be ahead of resident parks in City fringe, and no new off street parking should be required for infill housing. This will help to signal the need for less cars on our streets, and a preference for new developments to engage with public transport and car sharing. Recreational facilities, Parks etc should have easy access by public transport - so bus stops will be required. It is hard to imagine why any taxi stands are needed at all given the trends to app based hailing of shared cars. They should not be prioritised at all.

Q15. **Do you agree with this pricing approach?** No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Increasing the cost per hour over time seems clever, but only works if people are able to stay in the park for a long period f time, otherwise the situation will just encourage people to move and churn the parks. Under the proposal, it would be cheaper for me to move the car in and out of a park hourly than to stay for 2 hours. Demand based pricing might be better. Blair and Allen Streets are excellent examples. They are empty during the day, mostly, then full at night. It would make sense to charge less during the day than in the evenings in these areas. It is time to plan for a time when all parking is able to be managed by apps. This could mean a major reduction in investment in parking infrastructure. There may also be other ways of managing revenue - eg congestion charging - which might discourage people from bringing cars into the central city.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Other (please specify)

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. New dwellings/homes built after 2020
3. Businesses located with the zone
4. Other pre-2020 dwellings with no off-street parking
5. Pre-1930s houses or pre-1940s apartments with no off-street parking
6. EV owners with no off-street parking
7. Second permits
8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

If you are going to continue to require infill housing to create more off street parking (which I don't agree with), then allow people doing new build to install parking stacking machines - these to count as 2 parks, rather than the existing Council requirement that parking for new residences must be side by side.

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

Public transport seems unreliable to me

Other (please specify)

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

I'm really surprised that you don't reference rideshare or app based ride systems. I would have thought these were the biggest threat to public transport use (other than the poor routes and now unreliable service). They also provide a huge opportunity. In many cities I use the Uber share option and catch a ride with 3 to 4 others going the same direction as me. I do not want to see the electric scooters on the footpath as it makes me feel really unsafe. Again I have spent a lot of time in other cities (eg LA) where they use the bike lanes on the road. Finally, the parking scheme cannot be separate from any longer term scheme to make the city more liveable and green. It is time you stopped insisting on off street parking for new builds in residential areas, and accepted that cars are going to wane, and people will resent having garages that are a requirement of the Council, but only used as storage for bikes etc which need far less space.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Neutral
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Strongly Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Strongly Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly disagree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

You need to make residents parking more of a priority. We live in Kaiwharawhara, have no off street parking, and can often not get a park in our own street because of commuters using it as a car park when they go to work. This situation is far from ideal.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking

2. Other pre-2020 dwellings with no off-street parking

3. New dwellings/homes built after 2020

4. Second permits

5. All existing dwellings with 1 or more off-street space

6. Mobility permit holders

7. EV owners with no off-street parking

8. Businesses located with the zone

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too far from where I live or from my destination

I need my vehicle for work

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

I live too far from where I'm going to walk or cycle

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. Are there any objectives you think we have missed?

Supporting human enjoyment of life. I think these objectives focus on safety, environment, and business. I think we need to design cities to make humans happy, and well.

Q3. Is there anything else you would like to tell us about the objectives?

Hmm, perhaps we should also support socialisation and connectedness between humans.

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Agree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

**Q13. Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. Is there anything else you would like to tell us about the proposed parking space hierarchies?

not answered

Q15. Do you agree with this pricing approach?

Yes

Q16. Is there anything else you would like to tell us about this proposed pricing approach?

This would evenly balance the load across parking facilities by using price incentive. This may disproportionately effect those on low incomes - they may be priced out of prime parking locations, leading to inequitable outcomes in terms of financial inequality.

Q17. Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Reduce, remove or relocate coupon parking where it conflicts with residents access/parking

Reduce the size of residents parking exemption zones (so residents with permits can only park close to their home address)

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Introduce online application and permitting system

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Introduce discounted exemption permits for mobility permit holders and EV car-owners

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. Pre-1930s houses or pre-1940s apartments with no off-street parking

3. EV owners with no off-street parking

4. Other pre-2020 dwellings with no off-street parking

5. New dwellings/homes built after 2020

6. Businesses located with the zone

7. Second permits

8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

Public transport seems unreliable to me

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Yes, I would like to submit an oral submission

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Very important
Support safe movement	Very important
Support business wellbeing	Somewhat important
Support city amenity and safety	Very important
Support access for all	Very important
Support move to becoming an eco-city	Very important
Deliver service excellence and a safe working environment	Very important

Q2. **Are there any objectives you think we have missed?**

Getting cars off the road in the inner city. I'm assuming this links to 'supporting a shift in the type of transport'.

Q3. **Is there anything else you would like to tell us about the objectives?**

Fully support the overall goals / objectives. Getting cars out of the city centre and making the city a safe walking, pedestrian friendly, biking, public transport centre. Living in the central city during lock down showed that removing cars from the city greatly improved air quality and walking through the city was a pleasure.

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Very helpful
Provide parking space availability information	Very helpful
Align Council operations with the parking policy and report on performance	Very helpful

Q5. **Are there any principles you think we have missed?**

not answered

Q6. Is there anything else you would like to tell us about the principles?

In my opinion (for the central city) the price point for parking needs to be high and a really efficient public transport system needs to be in place. The decision for those who want to come to the city then becomes....am I willing to pay for the privilege of driving into and parking in the city, or would I prefer to save my money and us a good public transport system. Examples of city where I have seen this working. Portland - free light rail in central city, with big parking areas on the city fringes. Singapore - parking is predominately in parking buildings and is expensive, roads are also tolled in the central area. This money subsidises public transport (cheap buses, and underground)

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

Strongly agree

**Q8. Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Strongly agree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Agree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Agree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

Use the revenue from high cost / high demand parking spaces to subsidise public transport

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Provide car share, mobility and micro-mobility on-street parking spaces

Change on-street parking to short-stay parking only (up to 3 hours) with residents exemption permits

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

Provide residents with an annual allocation of one-day exemption passes for visitors/tradespeople etc to use

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders
2. EV owners with no off-street parking
3. Pre-1930s houses or pre-1940s apartments with no off-street parking
4. Other pre-2020 dwellings with no off-street parking
5. Businesses located with the zone
6. Second permits
7. New dwellings/homes built after 2020
8. All existing dwellings with 1 or more off-street space

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

None of these, I use public transport regularly

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Somewhat important
Support safe movement	Very important
Support business wellbeing	Somewhat unimportant
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Somewhat important
Deliver service excellence and a safe working environment	Somewhat important

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Q5. Are there any principles you think we have missed?

not answered

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?

not answered

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

not answered

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

not answered

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Strongly agree

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

not answered

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

not answered

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

not answered

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

not answered

Q15. **Do you agree with this pricing approach?**

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

not answered

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

Set an annual application/renewal date and only issue permits for 12months (with a refund option if you move out of zone)

If a second permit is issued for the same household, the second permit is more expensive

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Pre-1930s houses or pre-1940s apartments with no off-street parking
2. Other pre-2020 dwellings with no off-street parking
3. EV owners with no off-street parking
4. Mobility permit holders
5. Businesses located with the zone
6. New dwellings/homes built after 2020
7. All existing dwellings with 1 or more off-street space
8. Second permits

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport timetable doesn't suit my schedule

I have to make multiple stops or multiple journeys

Public transport route has too many transfers

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

Other (please specify)

Q22. **Do you have any final comments about the topics raised in this submission?**

not answered

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. How important are these objectives to you?

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Somewhat important
Support city amenity and safety	Somewhat important
Support access for all	Somewhat important
Support move to becoming an eco-city	Neutral
Deliver service excellence and a safe working environment	Neutral

Q2. Are there any objectives you think we have missed?

not answered

Q3. Is there anything else you would like to tell us about the objectives?

not answered

**Q4. To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Somewhat helpful
Prioritise how Council-controlled parking is managed	Somewhat helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Somewhat helpful
Parking is priced at a level that achieves objectives and is consistent	Somewhat helpful
Support local area-based parking plans where there is a need & support	Somewhat helpful
Focus on prioritising existing space, not on increasing parking supply	Somewhat unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Somewhat unhelpful

Q5. Are there any principles you think we have missed?

I would like to see the return to free parking on the weekends.

Q6. Is there anything else you would like to tell us about the principles?

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Neutral

Q11. **Outer Residential AreasHigh parking space priority: bus stops, urban design features, then residents parks.Medium parking space priority: car share parks, mobility parks, then EV charging parks.Low parking space priority: short stay parks, loading zones then public bus layover.Lowest parking space priority: bicycle/micro-mobility parks, small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for residential areas? **

Neutral

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Neutral

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Neutral

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

What is meant by urban design features?

Q15. **Do you agree with this pricing approach?**

No

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**

No I think that this is a way to increase parking revenue and it advantages those who don't have to worry about money. It would create parking class system.

Q17. **Residents Parking SchemeWe are proposing to change existing and new residents' parking schemes. Residents' parking schemes prioritise residents to park on the street near their home and ensure access for their visitors. The introduction of a scheme will be guided by the number of households with off-street parking compared with households with no off-street parking.For more in depth information regarding the residents parking scheme, please see page 25 in the Statement of Proposal. Which of the following aspects would you like to see included in a residents parking scheme?Please tick all that apply.**

Residents' parking schemes will be guided by the ratio of households with off-street parking to households with no off-street parking

---

Q18. **Allocation of residents parking permitsPlease rank the following categories in order of priority with 1 being the highest and 8 being the lowest. Please put the priority rank from 1 - 8 to the left of the category.**

1. Mobility permit holders

2. All existing dwellings with 1 or more off-street space

3. Other pre-2020 dwellings with no off-street parking

4. Pre-1930s houses or pre-1940s apartments with no off-street parking

5. Second permits

6. EV owners with no off-street parking

7. Businesses located with the zone

8. New dwellings/homes built after 2020

Q19. **Do you have anything else to add about the residents parking scheme, or any ideas we haven't thought of?**

not answered

Q20. **What deters you from using public transport? Please select all that apply.**

Public transport is too expensive

Q21. **What prevents you from walking, cycling or using other forms of active transport? Please select all that apply.**

None of these, I walk/bike/scooter regularly

Q22. **Do you have any final comments about the topics raised in this submission?**

I would like to see the resumption of free parking on the weekends to encourage people to go back to the city, esp after the financial harm that they have encountered due to the Covid 19 crisis.

Q23. **Please check below if you want to make an oral submission(Oral submissions will be scheduled for the end of May with additional dates at the end of June)**

Q1. **How important are these objectives to you?**

Support shift in type of transport used	Neutral
Support safe movement	Somewhat important
Support business wellbeing	Very important
Support city amenity and safety	Very important
Support access for all	Somewhat important
Support move to becoming an eco-city	Very unimportant
Deliver service excellence and a safe working environment	Somewhat important

Q2. **Are there any objectives you think we have missed?**

not answered

Q3. **Is there anything else you would like to tell us about the objectives?**

not answered

Q4. **To what extent do you think these principles will help us achieve our objectives? **

Making changes that link to improvements in transport system	Very helpful
Prioritise how Council-controlled parking is managed	Very helpful
Ensure that access to the city and suburban centres are inclusive and prioritise those who need it	Very helpful
Parking is priced at a level that achieves objectives and is consistent	Very helpful
Support local area-based parking plans where there is a need & support	Very helpful
Focus on prioritising existing space, not on increasing parking supply	Very unhelpful
Provide parking space availability information	Somewhat helpful
Align Council operations with the parking policy and report on performance	Neutral

Q5. **Are there any principles you think we have missed?**

More parking please it is difficult to find parks on weekends and when i have appointments, the frequency of public transport is not great enough to be able to get to appointments on weekends. Until the public transport is more often, we cannot have less parks.

Q6. **Is there anything else you would like to tell us about the principles?**

not answered

Q7. **Key Transport Routes (such as Lambton Quay, Thorndon Quay, etc.)High parking space priority: bus stops.Low parking space priority: urban design features, mobility parks, loading zones, bicycles/micro-mobility parks, car share parks, EV charging parks, short stay parks, small passenger service vehicles/taxi stands, motorcycle parks then public bus layovers.Lowest parking space priority: bus/coach parks, residents parks, then commuter parks.To what degree do you think we have this correct for key transport routes?**

Disagree

Q8. **Central CityHigh parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, loading zones, then short stay parks.Medium parking space priority: small passenger service vehicles/taxi stands, car share parks, EV charging parks, then motorcycle parks.Low parking space priority: coach/bus parks.Lowest parking space priority: residents parks, public bus layover then commuter parks.To what degree do you think we have this correct for the Central City? **

Disagree

Q9. **Suburban Centres (shopping precincts) High parking space priority: bus stops, mobility parks, urban design features, bicycle/micro-mobility parks, then short stay parks.Medium parking space priority: loading zones, motorcycle parks, small passenger service vehicles/taxi stands, car share parks, then EV charging parks.Low parking space priority: public bus layover then coach/bus parks.Lowest parking space priority: residents parks then commuter parks.To what degree do you think we have this correct for suburban centres?**

Disagree

Q10. **City Fringe High parking space priority: bus stops, urban design features, residents parks, then car share parks.Medium parking space priority: mobility parks then EV charging parks.Low parking space priority: short stay parks, loading zones, bicycle/micro-mobility parks, then public bus layover.Lowest parking space priority: small passenger service vehicles/taxi stands, motorcycle parks, commuter parks, then coach/bus parks.To what degree do you think we have this correct for the city fringe? **

Agree

Q12. **Council Parks, Sports, Recreation & Community FacilitiesHigh parking space priority: bicycle/micro-mobility parks, mobility parks, motorcycle parks, short stay parks, coach/bus parks, then urban design features.Medium parking space priority: EV charging parks.Low parking space priority: car share parks, small passenger vehicles/taxi stands, residents parks, then commuter parks.Lowest parking space priority: public bus layover, loading zones then bus stops.To what degree do you think we have this correct for Council parks, sports, recreation & community facilities? **

Disagree

Q13. **Council's Central City Off-Street ParkingHigh parking space priority: mobility park, bicycle/micro-mobility parks, motorcycle parks, then short stay parks.Medium parking space priority: car share parks, EV charging parks, then commuter parks.Lowest parking space priority: loading zones, coach/bus parks, public bus layover, urban design features, bus stops, residents parks, then small passenger service vehicles/taxi stands.To what degree do you think we have this correct for Council's central city off-street parking? **

Strongly agree

Q14. **Is there anything else you would like to tell us about the proposed parking space hierarchies?**

You need to consider construction parks for surveyors, engineers, plumbers, electricians, those who dont always qualify for loading zones but are needed for work in the city and can't find parks or have to constantly stop what they are doing to move every two hours, where a four ish hour situaion might suit better, and its too far to take their gear from parking buildings.

Q15. **Do you agree with this pricing approach?**

Yes

Q16. **Is there anything else you would like to tell us about this proposed pricing approach?**
